The Living Animals of the World: Birds, fishes, reptiles, insects Charles John Cornish,Frederick Courteney Selous,Harry Johnston,Sir Herbert Maxwell,1902 *Megapodes* René W. R. J.

Dekker,Gillian C. Baker,2000 **The Action Plan for Australian Birds 2020** Stephen T. Garnett,G Barry Baker,2021-12 *The Action Plan for Australian Birds 2020* is the most comprehensive review of the status of Australia s avifauna ever attempted The latest in a series of action plans for Australian birds that have been produced every decade since 1992 it is also the largest The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in

the country and feature far more detail than any of the earlier plans This volume also includes accounts of over 60 taxa that are no longer considered threatened mainly thanks to sustained conservation action over many decades This extensive book covers key themes that have emerged in the last decade including the increasing impact of climate change as a threatening process most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains However the effects are also indirect as happened in the catastrophic fires of 2019-20 Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population But there are good news stories too especially on islands where there have been spectacular successes with predator control Such uplifting results demonstrate that when action plans are followed by action on the ground threatened species can indeed be recovered and threats alleviated

Behavioral Ecology of Tropical Birds Bridget J.M. Stutchbury, Eugene S. Morton, 2022-09-28 Behavioral Ecology of Tropical Birds Second Edition provides the most updated and comprehensive review on the evolution of behavior in tropical landbirds The book reviews gaps in our knowledge that were identified twenty years ago when the first edition was published highlights recent discoveries that have filled those gaps and identifies new areas in urgent need of study It covers key topics including timing of breeding movement ecology life history traits slow vs fast pace of life mating systems mate choice territoriality communication biotic interactions and conservation Written by international experts on the behavior of tropical birds the book explores why the tropics is a unique natural laboratory to study the evolution of bird behavior and why temperate zone species are so different A recent surge of studies on tropical birds has helped to reduce the temperate zone bias that arose because most avian model species in behavioral ecology were adapted to northern temperate climates This is an important resource for researchers ecologists and conservationists who want to understand the rich and complex evolutionary history of avian behavior Includes examples from around the world Provides a historical perspective on new knowledge in the past 20 years Identifies knowledge gaps that have been filled along with new gaps that have emerged Explores how avian behavior in the tropics is related to conservation
