## **Survival In The City Survival In The City:**

**Survival of the City** Edward Glaeser, David Cutler, 2021-09-07 One of our great urbanists and one of our great public health experts join forces to reckon with how cities are changing in the face of existential threats the pandemic has only accelerated Cities can make us sick They always have diseases spread more easily when more people are close to one another And disease is hardly the only ill that accompanies urban density Cities have been demonized as breeding grounds for vice and crime from Sodom and Gomorrah on But cities have flourished nonetheless because they are humanity's greatest invention indispensable engines for creativity innovation wealth and connection the loom on which the fabric of civilization is woven But cities now stand at a crossroads During the global COVID crisis cities grew silent as people worked from home if they could work at all The normal forms of socializing ground to a halt How permanent are these changes Advances in digital technology mean that many people can opt out of city life as never before Will they Are we on the brink of a post urban world City life will survive but individual cities face terrible risks argue Edward Glaeser and David Cutler and a wave of urban failure would be absolutely disastrous In terms of intimacy and inspiration nothing can replace what cities offer Great cities have always demanded great management and our current crisis has exposed fearful gaps in our capacity for good governance It is possible to drive a city into the ground pandemic or not Glaeser and Cutler examine the evolution that is already happening and describe the possible futures that lie before us What will distinguish the cities that will flourish from the ones that won't In America they argue deep inequities in health care and education are a particular blight on the future of our cities solving them will be the difference between our collective good health and a downward spiral to a much darker place

**Archigram** Simon Sadler,2005-06-24 The first book length critical and historical account of an ultramodern architectural movement of the 1960s that advocated living equipment instead of buildings In the 1960s the architects of Britain s Archigram group and Archigram magazine turned away from conventional architecture to propose cities that move and houses worn like suits of clothes In drawings inspired

by pop art and psychedelia architecture floated away tethered by wires gantries tubes and trucks In Archigram Architecture without Architecture Simon Sadler argues that Archigram's sense of fun takes its place beside the other cultural agitators of the 1960s originating attitudes and techniques that became standard for architects rethinking social space and building technology The Archigram style was assembled from the Apollo missions constructivism biology manufacturing electronics and popular culture inspiring an architectural movement High Tech and influencing the postmodern and deconstructivist trends of the late twentieth century Although most Archigram projects were at the limits of possibility and remained unbuilt the six architects at the center of the movement Warren Chalk Peter Cook Dennis Crompton David Greene Ron Herron and Michael Webb became a focal point for the architectural avant garde because they redefined the purpose of architecture Countering the habitual building practice of setting walls and spaces in place Archigram architects wanted to provide the equipment for amplified living and they welcomed any cultural rearrangements that would ensue Archigram Architecture without Architecture the first full length critical and historical account of the Archigram phenomenon traces Archigram from its rediscovery of early modernist verve through its courting of students to its ascent to international notoriety for advocating the disappearance of architecture
