Junker,2023 Globalization is a word with many meanings Some people say globalization is responsible for having lifted millions of people out of poverty over the past decades Other people say that globalization is neocolonialism All will agree that the processes that accompany globalization have had tremendous impacts on the environment

Commodification of the environment along with environmental degradation have led to an almost universal awareness of the negative effects of such crises as disrupted climate. The conservation and restoration of the environment as well as the protection of biodiversity are essential for human life including its economic components. The international community has responded to the challenge by shifting away from the Brundtland Commission's intergenerational concept of development which meets the needs of current generations without compromising the ability of future generations to meet their own needs to equating development with economic development under the New York Convention and reserving a third and separate pillar for economics over and against social concern and the environment. However, promising the concepts sustainable development and sustainability may have been they have become overused and meaningless. Like worn out coins they became just placeholders. To reinscribe meaning in the metal of sustainable development the authors in this book examine environmental problems caused, facilitated or exacerbated by globalization as seen from the perspectives of the Global South and emerging economies. Investments, trade and technological advances are key driving forces of transition in these countries. The economic development component also known as green growth policies may be preferred by globalizing forces which also regard it as most suitable to cope with climate disruption for example. With the globalization of economics comes some aspects of the globalization of law. The globalization of environmental law that is currently under formation in the Global South addresses the integration of the ecological and economic components by analyzing the contribution of emerging and developing economies. Sometimes environmental law is part of the solutions, sometimes environmental law is part of the problems. In this book the terms Global South and emerging economies are included as alternative conceptualizations to the developed and developing countries. But this alternative conceptualization itself is a divide that enables globalization. In the chapters of this book the perspectives of the Global South and emerging economies are presented by lawyers from Brazil, Ethiopia, India, Mongolia, Nigeria and St Vincent and the Grenadines as well as from the European states of France, Georgia, Germany and Slovakia. The authors are natives of either emerging economies or of the Global South or work extensively in those regions. All of the book's themes are mentioned in the title: globalization, environmental law, sustainable development, the Global South, implementation and challenges.
