Ecological Politics Greta Gaard, 1998-05-11 AN ILLUMINATING ACCOUNT OF TWO INTERCONNECTED SOCIAL MOVEMENTS FROM THEIR GRASSROOTS ORIGINS THROUGH THE 1996 GREEN PRESIDENTIAL CAMPAIGN Both ecofeminism and Green politics have played an important role in the radical environmental movement As a theory and a movement bringing together feminism environmentalism socialism and peace activism ecofeminism began taking shape in the U S by 1980 Four years later many ecofeminists participated in founding and developing the U S Green movement Where are these movements today A member of both movements Greta Gaard bases her analysis on personal experience as well as extensive secondary sources and interviews with key theorists activists and speakers across the United States She describes the paths environmental causes the feminist peace movement the feminist spirituality movement the animal liberation movement and the anti toxics movement as well as experiences of interconnectedness that have led women and a few men to

articulate an ecofeminist perspective The book illustrates the development of the Greens from a national movement into a political party and defines the factions the Left Greens the Youth Greens and the Green Politics Network that underlay the debates during Ralph Nader s 1996 presidential campaign She sees the history of these three groups as stages in the transition from a leftist and sometimes anarchist focus to an emphasis on electoral political action that places the Green movement squarely within the pattern of other social movements around the world Gaard s analysis illuminates the nature and direction of each of these important movements and the pressures and conflicts experienced by all social movements at the end of the twentieth century

Ethics and Urban Design Gideon S. Golany, 1995-08-01 The city according to urban design scholar Gideon Golany is the largest and most complicated project ever produced by humankind In *Ethics and Urban Design* he challenges design professionals to reexamine their basic assumptions about the urban environment and offers design strategies based on enduring human values In search of answers to the paradoxical problems of the modern city Golany takes the reader through the sweep of human settlements from the dawn of civilization to the present His authoritative examination of the genesis of the city is illuminated by instructive examples of early urban centers Mesopotamia the Indus River Valley the Egyptian cities of the Nile and the capital cities of ancient China all are examined in the light of what made them work as major centers of human activity What Golany finds in the success stories of the past are cohesive sociocultural values that shaped the design of homes neighborhoods and cities These ethical values helped to maintain an equilibrium within the society that permeated its natural social and human made environments In the present era conversely he finds a major disconnection between human values and the ethics of technology which has resulted in confusion imbalance and dehumanization To help designers gain a perspective on possible solutions Golany explains leading comprehensive design strategies including the valley theory the urban border zone concept and the regional concept of Patrick Geddes In the case study of contemporary Holland he details what a small densely populated country has been able to achieve through design planning rooted in environmental ethics

Future Frontiers for Urban Design the culminating section of this groundbreaking book opens with Golany s vision of the future city He examines the issues of thermal performance and climate as they relate to urban design and offers the concept of geospace the earth enveloped habitat Buttrussing his presentation with detailed information on the mechanics of geospace Golany describes case studies of the successful use of earth enveloped habitats in China and Tunisia He makes a powerful argument for the geospace city as a renewal of ancient traditions that can restore the vital equilibrium between nature and human settlements that we seem to have lost

Ethics and Urban Design is a distinguished scholar s analysis and prescription for the city it offers an abundance of stimulating ideas for the architects designers and planners who have assumed responsibility for its future *Ethics Urban Design* draws on historical examples and contemporary case studies from around the world to illustrate urban design strategies that can help restore equilibrium to the natural social and built environments of the city In this stimulating book urban design scholar Gideon Golany offers architects designers and

planners both an in depth analysis of the fundamental issues of urban design and practical options for the design of the future city Examines the genesis and development of the city from the earliest presettlements to the rise of urban society Presents urban design strategies based on historical examples of early urban centers including Mesopotamia the Indus River Valley Egypt and China Offers case studies of environmental success stories from Europe Asia and Africa Details geospace design options the use of underground space for diversified land use housing and transportation Fully illustrated with over 80 photographs drawings and diagrams

Lang, Walter Moleski, 2010 Lang and Moleski argue here that the model of function and the concept of a functional building that we have inherited from the 20th century Modernists is limited in scope They propose a new model which responds to observations about the inadequacy of current ways of thinking about functionalism in architecture and urban design Copiously illustrated the book discusses in detail each function of buildings and urban environments
