Sustainable Management Of Tropical Rain Forest In Uganda:

Sustainable Management of Tropical Rain Forest in Uganda Peter K. Karani, 1994 This volume traces the development of tropical forest management in Uganda It is part of a series intended to assist a wider understanding of the historical basis to the new directions and policy initiatives now being taken in the countries concerned The report provides a clear account of forest management during the period up to independence in 1962 the development of management systems such as the tropical shelterwood system and assesses the current position before looking to the future

Conservation and Management of Tropical Rainforests, 2nd Edition Eberhard F Bruenig, 2016-12-07 This new edition of Conservation and Management of Tropical Rainforests applies the large body of knowledge experience and tradition available to those who study tropical rainforests Revised and updated in light of developments in science technology economics politics etc and their effects on tropical forests it describes the principles of integrated conservation and management that lead to sustainability identifying the unifying phenomena that regulate the processes within the rainforest and that are fundamental to the ecosystem viability Features of the natural forest and the socio cultural ecosystems which can be mimicked in the design of self sustaining forests are also discussed A holistic approach to the management and conservation of rainforests is developed throughout the book The focus on South East Asian forestry will be widened to include Africa and Latin America Recent controversial issues such as biofuels and carbon credits with respect to tropical forests and their inhabitants will be discussed This book is a substantial contribution to the literature it is a valuable resource for all those concerned with rainforests

Dipterocarp Forest Ecosystems: Towards Sustainable Management Andreas Schulte, D Schone, 1996-07-30 The Dipterocarp forests of South East Asia constitute a dominant component of the world s tropical forests As such they are intertwined with a Pandora s box of problems that have plagued the world for decades Over and underdevelopment poverty hunger population growth exploitation of natural resources environmental degradation loss of biodiversity the debt crisis and of late climate change The world community has responded to the crucial role of these forests and the dangers facing them with funds and a myriad of programmers projects institutions conferences and networks Apparently neither a lack of knowledge nor finance constrains the dissipation of sustainable management practices the fate of the world s Dipterocarp forests will certainly depend on the involvement of scientists from many nations and disciplines but will perhaps ultimately rest with local policymakers forest administrators and line foresters Unfortunately these two groups rarely share realms readings or reasoning practical foresters invariably very involved with the challenges of day to day forest management in remote isolated environments may long remain oblivious to scientific developments Traditionally though they do find solutions to problems gain deep insights into forest responses and practical constraints and sometimes even report in semi obscure publications which rarely reach the scientific circuit The editors of the book both experienced forest and soil scientists and practical forest managers have attempted to bridge the gap between the realms of forest

science and practice in Dipterocarp ecology management and utilization The Conservation Atlas of Tropical Forests Jeffrey Sayer, 1992-06-18 Recognizing that sound information is vital to the progress of conservation IUCN have gathered together a visual portfolio of maps of rain forests in Africa The accompanying text analyzes the extent and causes of deforestation and points a way towards sustainable forest development Timber Production and Biodiversity Conservation in Tropical Rain Forests Andrew Grieser Johns, 1997-07-10 How timber production and tropical biodiversity conservation can be balanced **Achieving the Sustainable Management of Forests** Alastair Fraser, 2019-04-26 This book discusses the reality of implementing sustainable forest management measures Rather than simply offering theoretical descriptions the book comprehensively details how sustainably managed forests can only be achieved through the cooperation and support of foresters politicians business leaders local communities consumers of forest based goods and services and the general public The book also aims to raise public awareness of the factors involved in attaining the true sustainability of forest management and the consequences of failing to do so as well as the current issues facing sustainable forest management such as land ownership and land use rights political corruption environmental stressors and economic pressure In 17 chapters the book will appeal to academics and teachers in forestry and related areas government practitioners development agencies and NGOs **Tropical Forest Conservation and Industry Partnership** Connie J. Clark, John R. Poulsen, 2012-04-23 Historically the conservation of forests and wildlife has focused on the creation of national parks and reserves However only 9% of protected areas are larger than 14 000 hectares likely making them too small to conserve ecosystem services and prevent loss of wide ranging keystone species such as elephant and leopard New approaches are needed that extend conservation beyond protected area boundaries into areas where economic considerations prevail The book describes one such emerging model of conservation the integration of the private sector into partnerships to protect biodiversity and improve forest management While such partnerships are being created in nearly every sector of resource extraction detailed analyses of how such partnerships work and whether they benefit biodiversity conservation are rare Using a case study from the Congo Basin the book examines principles of conservation and partnership and provides technical and methodological details to replicate an innovative conservation model It presents concrete solutions for expanding conservation across multi use landscapes a necessary action as industry expands to all the corners of the globe *Wildlife and Protected Area Management* Food and Agriculture Organization of the United Nations, 1997 , *Non-timber Forest Products from the Tropical Forests of Africa* , 1997 **The New Scramble for Africa** Padraig R. Carmody, 2017-01-03 Once marginalized in the world economy Africa today is a major global supplier of crucial raw materials like oil uranium and coltan China's part in this story has loomed particularly large in recent years and the American military footprint on the continent has also expanded But a new scramble for resources markets and territory is now taking place in Africa involving not just state but non state actors including Islamic fundamentalist and other rebel groups The second edition of P draig Carmody's popular

book explores the dynamics of the new scramble for African resources markets and territory and the impact of current investment and competition on people the environment and political and economic development on the continent Fully revised and updated throughout its chapters explore old and new economic power interests in Africa oil minerals timber biofuels land food and fisheries and the nature and impacts of Asian and South African investment in manufacturing and other sectors The New Scramble for Africa will be essential reading for students of African studies international relations and resource politics as well as anyone interested in current affairs

New Vistas in Agroforestry P. K. Ramachandran

Nair,M.R. Rao,L.E. Buck,2013-03-09 It was in late 2002 that the idea of preparing a collection of multi authored chapters on different aspects of ag st forestry as a compendium for the 1 World Congress of Agroforestry June 2004 was tossed around With the approval of the idea by the Congress Organizing Committee serious efforts to make it a reality got under way in early 2003 The rigorously peer reviewed and edited manuscripts were submitted to the publisher in December 2003 Considering the many different individuals involved in the task as authors and manuscript reviewers we feel quite pleased that the task could be accomplished within this timeframe We are pleased also about the contents on several counts First of all the tropical temperate mix of topics is a rare feature of a publication of this nature In spite of the scientific commonalities between tropical and temperate practices of agroforestry the differences between them are so enormous that it is often impossible to mesh them together in one publication Secondly several of the chapters are on topics that have not been discussed or described much in agroforestry literature A third feature is that some of the authors though well known in their own disciplinary areas are somewhat new to agroforestry the perceptions and outlooks of these scholars who are relatively uninuenced by the past happenings in agroforestry gives a whole new dimension to agroforestry and

Tropical Rain Forest Ecosystems H. Lieth,M.J.A. Werger,2012-12-02

After publication of the first volume of the Tropical Rain Forest the International Journal of Mycology and Lichenology commented This is a welcome addition to the literature on the ecology of tropical rain forests The book provides a wealth of data and stimulating discussions and is of great interest to ecologists interested in tropical areas Whereas the first volume dealt with system ecological aspects such as community organization and processes the present volume concentrates on biogeographical aspects such as species composition diversity and geographical variation Recent ecological research in the tropical rain forest has greatly extended our understanding of biogeographical patterns of variation in the various groups of organisms and has revealed many of the ecological and evolutionary forces that led to the present patterns of variation Many important systems of co evolution between the tropical rain forest ecosystems have also come to light and the loss of species and related damage is better understood in quantitative terms This volume presents a comprehensive review of these and other features of the rain forest ecosystem structure and the ecological processes operating that system General chapters on

abiotic and biotic factors are followed by specific chapters on all major groups of organisms Prospects for the future are discussed and research needs clearly stated Also the human exploitation of the system its effects and its limits are discussed The book is extensively illustrated by photographs graphs and tables and comprehensive bibliographies follow each chapter Author systematic and subject indices complete the book It is a must for all ecologists agriculturists foresters agronomists hydrologists soil scientists entomologists human ecologists nature conservationists and planners dealing with tropical areas Biologists and environmentalists will also find the volume of great interest

The Colobines Ikki Matsuda, Cyril C. Grueter, Julie A. Teichroeb, 2022-02-24 Covering colobine biology behaviour ecology and conservation this book summarises current knowledge of this fascinating group of primates

Land Use Change Richard J. Aspinall, Michael J. Hill, 2007-12-14 Changes in the use of land reflect a variety of environmental and social factors necessitating an equally varied suite of data to be used for effective analysis While remote sensing both from satellites and air photos provides a central resource for study socio economic surveys censuses and map sources also supply a wealth of valid informati

The Economic Theory of Community Forestry David Robinson, 2016-05-26 Community forestry is an expanding model of forest management around the world Over a quarter of forests in developing countries are now owned by or assigned to communities and there is a growing community forestry movement in developed countries such as Canada and the USA There is however no economic theory of community forestry and no systematic treatment of the potential economic advantages of promoting Community forestry in developed countries As a result much of the policy debate over forest management and forest tenure rests on confused and often erroneous views held by policy makers and encouraged by the dominant forestry industry The Economic Theory of Community Forestry aims to address this gap and provides the tools for understanding community forestry movement as an alternative form of ownership that can mobilize community resources and encourage innovation It uses a wide range of economic principles to show how community forestry can be economically superior to conventional forestry provides examples from Canadian practice and discusses the regulatory regime that policy makers must put in place to benefit from community forestry This book will be of interest to policy makers activists community forestry managers and members foresters and forestry students

Economic and Ecological Sustainability of Tropical Rain Forest Management Kathrin Schreckenber, Malcolm Hadley, 1991 The proposals outlined in this report form part of a wider set of interlinked activities planned or underway in the humid tropics within the framework of the MAB Programme and related Unesco activities in the ecological sciences and natural heritage field This broader canvas of activities includes research training demonstration and information diffusion on such topics as biological diversity traditional ecological knowledge and integrated conservation forest regeneration and ecosystem rehabilitation tropical soil fertility and its biological management savanna ecology and management tropical ecosystems and global change Discrete activities are underway or planned in these various domains In addition these topics may also be considered within a more wide ranging set of field activities
