Sustainable Use Of Genetic Resources Under The Convention On Biological Diversity:

Sustainable Use of Genetic Resources Under the Convention on Biological Diversity William Lesser, 1998 The Convention on Biological Diversity is a complex document particularly in those articles dealing with the ownership and use of genetic resources While only limited progress has been made in applying the Convention countries are nevertheless acting unilaterally on its placement of genetic resources as their sovereign right to exploit There is a need to review and synthesize all of the aspects of these issues and this book aims to fill that gap in the literature Its focus is the presentation of legal and economic issues regarding the sustainable use and transfer of genetic resources and associated technologies It also identifies specific steps that can be taken and their expected consequences Drawing particularly on Articles 8 9 15 16 18 and 19 of the Convention it will assist positive and timely action during this critical juncture in its application It will be invaluable for scientists policy makers and NGOs whether from the perspectives of economics or law or more applied fields such as biological conservation or plant breeding and biotechnology

Common Pools of Genetic Resources Evanson Chege Kamau, Gerd Winter, 2013-07-18 The Convention on Biological Diversity CBD strives for the sustainable and equitable utilization of genetic resources with the ultimate goal of conserving biodiversity The CBD and the Nagoya Protocol which has since been elaborated suggest a bilateral model for access to genetic resources and the sharing of benefits from their utilization There is concern that the bilateral exchange genetic resource for benefit sharing could have disappointing results because providers are left out of the process of research and development benefits are difficult to be traced to sources and providers owning the same resource may complain of being excluded from benefit sharing Thus the CBD objective of full utilization and equitability may become flawed Common Pools of Genetic Resources Equity and Innovation in International Biodiversity Law suggests common pools as a complementary approach to bilateralism This is one of the first books to reply to a number of complex legal questions related to the interpretation and implementation of the Nagoya Protocol Taking an inductive approach it describes existing pools and analyzes how they are organized and how they perform in terms of joint R D and benefit sharing It presents case studies of the most characteristic types of common pools provides suggestions for further developing existing pools to cope with the requirements of the CBD and NP and at the same time uses the clauses these conventions contain to open up for commons approaches Written by a team of expert academics and practitioners in the field this innovative book makes a timely and valuable contribution to academic and policy debates in international environmental law international biodiversity law intellectual property law climate law and the law of indigenous populations

Handbook of the Convention on Biological Diversity Secretariat To The Cbd, 2014-02-25 In 1992 at the Earth Summit in Rio the United Nations adopted the Convention on Biological Diversity CBD to agree international measures aimed at preserving the vital ecosystems and biological resources on which we all depend This is the official handbook to the Convention and presents all the most important information about the CBD including a guide to the decisions adopted and to

ongoing activities It is an essential resource for all the governments intergovernmental agencies NGOs and conservation bodies and researchers working in this area Included with the book is a fully indexed and cross referenced CD ROM containing all the relevant background material to the Convention linked to relevant decisions and other sources of information

International Law and the Conservation of Biological Diversity Michael Bowman, Catherine Redgwell, 1996-01-10 This work presents a thorough analysis of the biodiversity concept in international law and commentary on the 1992 United Nations Convention on Biological Diversity which was opened for signature following the 1992 UN Conference on Environment and Development This Convention is the first international treaty explicitly to address all aspects of biodiversity ranging from the conservation and sustainable use of biological resources to access to biotechnology and the safety of activities related to modified living organisms The work extends beyond the ambit of the Convention itself to examine the conservation of biodiversity in international law generally including measures for the protection of the terrestrial marine and Antarctic environment and particular features relating to sustainable use of biological resources ex situ conservation and plant genetic resources It further analyses the controversial issue of intellectual property rights the problems of implementation in the European Union and the United States differences between developing and developed states and the role of indigenous peoples This major new work has been written by members of the Committee on Environmental Law of the British Branch of the International Law Association following an earlier study on the subject of International Law and Global Climate Change Graham Trotman 1991 It is the first major study of the Convention of the context in which it was negotiated and of the prospects for its implementation following the entry into force of the Convention on 29 December 1993
