Managing a Global Resource Uma J. Lele, 2017-07-12 The rapid loss of tropical forests particularly in the developing world has been a global concern since the late 1980s and has prompted a variety of international initiatives to save the forests In 1991 the World Bank responded to global concerns and to criticism by nongovernmental organizations by forming a conservation oriented forest strategy Managing a Global Resource is an outgrowth of the independent evaluation conducted by the World Bank's Operations Evaluation Department and discusses how effectively that strategy was implemented In this detailed investigation Uma J Lele explores why the loss of forests and biodiversity has been so rapid in some developing countries Brazil Indonesia and Cameroon and not in others China India and Costa Rica She assesses future prospects for conservation in these six countries by critically examining their policies institutional arrangements and emerging national and international instruments to conserve forests and biodiversity Together these six countries account for 25 percent of the world's forest cover and 44 percent of the world's population Managing a Global Resource presents case studies of the forest sectors of each country in the context of overall development policies interest groups and governance issues Lele's investigation finds a fundamental divergence in forest rich countries between the global objectives of conservation and the local objectives of development and private profit In some forest poor countries in contrast natural resource loss has led the countries on their own accord to adopt a variety of conservation oriented policies and programs Despite the greater congruence between the global and national objectives in these forest poor countries competing demands on their resources and the constraints on their policies institutions and human capital make it difficult for them to affect forest and biodiversity conservation This volume makes it clear that

Andersen, 2002-12-12 A multi disciplinary team of authors analyze the economics of Brazilian deforestation using a large data set of ecological and economic variables They survey the most up to date work in this field and present their own dynamic and spatial econometric analysis based on municipality level panel data spanning the entire Brazilian Amazon from 1970 to 1996 By observing the dynamics of land use change over such a long period the team is able to provide quantitative estimates of the long run economic costs and benefits of both land clearing and government policies such as road building The authors find that some government policies such as road paving in already highly settled areas are beneficial both for economic development and for the preservation of forest while other policies such as the construction of unpaved roads through virgin areas stimulate wasteful land uses to the detriment of both economic growth and forest cover
