## **Sutwentyseven Flanker Sukhoi Fighter:**

China's Stealth Fighter Abraham Abrams, 2025-01-02 A detailed exploration of China's J 20 stealth fighter its development impact and role in reshaping global power dynamics The United States and Soviet Union began a race to develop the first and most capable fifth generation stealth fighters in the late 1970s The Cold War's end however was followed by both a near total collapse of Russian efforts and major cuts and delays to American programs This provided an opening for a rising and fast modernising Chinese defense industry to kick off its own ambitious program to produce a world leading fighter jet with next generation capabilities Once unveiled the program came to be seen as a herald of China's rising status as a leading player in high tech and major world power Development of the Chengdu J 20 began in the 1990s and has since consistently far exceeded expectations in both its performance and its development timeline The fighter made its first flight in 2011 and began deliveries to the People's Liberation Army Air Force in 2016 a small fraction of the time its American and Russian rivals would take Today it is the world's second most numerous stealth fighter outnumbered only by America's much smaller Lockheed Martin F 35 Lightning II with the two rivals seeing their first of many likely encounters confirmed in March 2022 As the J 20's capabilities have rapidly improved and the rate of production has significantly grown it has very conspicuously played a growing role in patrolling major hotspots in East Asia from Korea and the East China Sea to the Taiwan Strait and disputed South China Sea The J 20 program's success has been the most potent symbol of China's ascent from a minor player in combat aviation during the Cold War to the United States only peer level competitor today It has also set China on a course of pursuing multiple other fighter development efforts including a close competition with America to field the first and most capable sixth generation fighter in the 2030s The J 20 thus marks a major landmark not only in Chinese aviation history but also more broadly in the evolving balance of power between East and West as the country's technological and economic ascents allow it to successfully pursue highly ambitious weapons programs This book takes the J 20's story far back to the formation of the People's Liberation Army Air Force and its trial by fire in the Korean War tracing the rationale for developing a top end air superiority fighter It also compares its performance with rival fifth generation fighter programs in other countries and looks ahead to what the future may hold in this new arms race

**Phoenix from the Ashes** Cameron Scott Mitchell,2009-12-01 The continued existence of the Russian defence and arms industry OPK was called into question following the disintegration of the Soviet Union in 1991 Industry experts cited the lack of a domestic market endemic corruption and excess capacity within the industry as factors underpinning its predicted demise However the industry s export customers in China India and Iran during those early years became the OPK s saving grace Their orders introduced hard currency back into the industry and went a long way to preventing the forecasted OPK collapse Although pessimistic predictions continued to plague the OPK throughout the 1990s the valuable export dollars provided the OPK the breathing space it needed to claw back its competitive advantage as an arms producer That revival has been further underpinned by a new political commitment various research and development initiatives and the restoration of defence industry as a tool of Russian foreign policy The short term future of the Russian OPK looks promising The rising domestic defence order is beginning to challenge the export market as the OPK s most important customer Meanwhile exports will be safeguarded by continued foreign demand for niche Russian defence products Although the long term future of the OPK is more difficult to predict Russia s solid research and development foundation and successful international joint military ventures suggest that the current thriving trend in exports is likely to continue Russia represents the next generation of affordable and rugged military equipment for the arsenals of the developing world Coupled with Russia s growing ability to rearm itself through higher oil prices and a more streamlined defence industry the future of the OPK looks bright

Isaacs, 2020-10-30 In an era when knowledge can travel with astonishing speed the need for analysis of intellectual property IP law and its focus on patents trade secrets trademarks and issues of copyright has never been greater But as Robert M Farley and Davida H Isaacs stress in *Patents for Power* we have long overlooked critical ties between IP law and one area of worldwide concern military technology This deft blend of case studies theoretical analyses and policy advice reveals the fundamental role of IP law in shaping how states create and transmit defense equipment and weaponry The book probes two major issues the effect of IP law on innovation itself and the effect of IP law on the international diffusion or sharing of technology Discussing a range of inventions from the AK 47 rifle to the B 29 Superfortress bomber to the MQ 1 Predator drone the authors show how IP systems or their lack have impacted domestic and international relations across a number of countries including the United States Russia China and South Korea The study finds among other results that while the open nature of the IP system may encourage industrial espionage like cyberwarfare increased state uptake of IP law is helping to establish international standards for IP protection This clear eyed approach to law and national security is thus essential for anyone interested in history political science and legal studies      *The Military Balance 1994-1995* Rachel
