Programming teaches computer science students how to use programming skills to explore fundamental concepts and computational approaches to solving problems. This book gives beginning students an introduction to Cryptography: Policy and Algorithms Edward Pyle Dawson, Jovan Golic, 1996-01-24. This book constitutes the refereed proceedings of the International Conference Cryptography Policy and Algorithms held in Brisbane Queensland Australia in July 1995. Over the past few years issues relating to cryptography policy have made headline news particularly those concerned with the rights to privacy of the individual who may choose to use cryptographic systems to maintain confidentiality against the needs of legal authorities to conduct wiretapping to help combat crime. The 27 revised full contributions in this volume are devoted to both crypto policy matters and the related theory and applications of cryptographic algorithms. The volume is of relevance to cryptology researchers and professionals in industry and administration.

Computer-Assisted Research in the Humanities Joseph Raben, 2014-05-18. Computer Assisted Research in the Humanities describes various computer assisted research in the humanities and related social sciences. It is a compendium of data collected between November 1966 and May 1972 and published in *Computer and the Humanities*. The book begins with an analysis of language teaching texts including the DOVACK system, a program used for remedial reading instruction. It then discusses the objectives, types of computer used and status of the Bibliographic On line Display BOLD semiotic systems augmented human intellect program, automatic indexing and similar research. The remaining chapters present computer assisted research on language and literature, philosophy, social sciences and visual arts. Students who seek a single reference work for computer assisted research in the humanities will find this book useful.

Learner English on Computer Sylviane Granger, 2014-02-04. The first book of its kind, *Learner English on Computer* is intended to provide linguists, students of linguistics and modern languages and ELT professionals with a highly accessible and comprehensive introduction to the new and rapidly expanding field of corpus based research into learner language. Edited by the founder and co-ordinator of the International Corpus of Learner English ICLE, the book contains articles on all aspects of corpus compilation, design and analysis. The book is divided into three main sections. In Part I, the first chapter provides the reader with an overview of the field, explaining links with corpus and applied linguistics, second language acquisition and ELT. The second chapter reviews the software tools which are currently available for analysing learner language and contains useful examples of how they can be used. Part 2 contains eight case studies in which computer learner corpora are analysed for various lexical, discourse and grammatical features. The articles contain a wide range of methodologies with broad general application. The chapters in Part 3 look at how Computer Learner Corpus (CLC) based studies can help improve pedagogical tools, EFL grammars, dictionaries, writing textbooks and electronic tools. Implications for classroom methodology are also discussed. The comprehensive scope of this volume should be invaluable to applied linguists and corpus linguists as well as to learner corpus builders and analysts who wish to discover more about a new, exciting and fast growing field of research.
