Semantikforschung verfügbar      *Semantik / Semantics* Arnim von Stechow,Dieter Wunderlich,2008-07-14 During the past 20  
years the investigation into meaning of natural languages has emerged into one of the most active disciplines in theoretical  
linguistics The different traditions of linguistics philosophy of language and philosophical logic converged in the paradigm of  
truth conditional semantics which now plays a central role in the cognitive sciences From empirical research in particular  
languages more principal questions arise of how the speaker succeeds in expressing particular types of meaning by use of  
formal combination of signs The theories developed to cope with the question assume that for a hearer the meaning of a  
complex expression must be computable and therefore modern theoretical semantics uses formal algebraic methods to  
construct the meaning compositionally in view of syntactic structure Furthermore meaning need to be anchored in the  
experience available to hearer In order to deal with this theoretical semantics extensively uses the concept of truth conditions  
which roughly explain how a world must be structured in order to be matched by certain linguistic expressions Semantic  
analyses are complemented by context theory and the theory of speech acts Thus linguistic meaning must be related to  
human cognitive capacities and therefore theoretical semantics is tightly connected with philosophical logic as well as  
cognitive sciences in general The aim of this handbook is to represent the body of theoretical knowledge which has evolved in  
the international research of the last two decades Some of the theories can now be termed classical in that they belong to the  
commonly accepted base of theoretical semantics Other theories are still disputed and there are problems still to be solved as  
normal in a more developed science The authors who are leading experts in the field of semantics try to balance the accepted  
and the questionable results It goes without saying that each author holds a particular position in this respect Some articles  
are written in English some in German Since semantics is considered to be a subfield of linguistics the articles are arranged  
due to linguistic points of view In the first 5 chapters comprising 15 articles the common principles of semantics are  
presented ontological foundations of semantics composition of meaning problems of use context speech acts and lexical base  
of meaning The next 5 chapters comprising 25 articles are concerned with semantic phenomena theories and problems which  
are specific for a particular class of linguistic expressions These are arranged according to parts of speech nouns functional  
categories verbs adjectives and so on This division does not reflect a theoretical position by itself however it allows one to

recognize problems connected with one another Some more general questions are discussed in more than one article in different perspective and vicinity The Handbook is complemented by a service article on formal methods in semantics followed by a comprehensive bibliography including about 1700 entries and both a subject and a name index This handbook is indispensable for all research in linguistics and neighboring disciplines philosophy of language cognitive sciences Some of the articles can serve as basic literature for classes of advanced students
