Temples and Sanctuaries from the Early Iron Age Levant William E. Mierse, 2012-10-15 The vision for this impressive work on temple architecture in the Levant grew out of the author's work on Roman temple designs on the Iberian Peninsula and continual references to Semitic influences on the designs of sanctuaries both on the Peninsula and in North Africa It was assumed that Phoenician colonization had brought with it the full flowering of Levantine architectural forms As Mierse began to search for relevant material on the ancient Levant however he discovered that no overall synthesis had ever been written and it was virtually impossible to recognize and isolate Semitic elements in architectural forms This book addresses this need The analysis presented here is comparative and follows the methodology most commonly employed by architectural historians throughout the twentieth century It is a formalist approach and permits the isolation of lines of continuity and the detection of discontinuity While Mierse relies heavily on this traditional method he also introduces some approaches from the postprocessual school of archaeology in its attempts to discern an appropriate way for cult to be investigated by archaeology The sanctuaries that this book presents were erected between the end of the Late Bronze Age conventionally assigned the date of 1200 B C E and the annexation of the Levantine region into the Assyrian Empire when Mesopotamia again became highly influential in the region The topic concerns temples that were produced during the period when the Levant was its own entity and politically independent of Egypt Mesopotamia or Anatolia During this period the designs chosen for inclusion in this book must reflect local choices rather than resulting from imposed outside concepts The architecture that emerged in the wake of the downfall of the Late Bronze Age and the subsequent reemergence of social cohesiveness manifested significant changes in form and function The five centuries under review reveal exciting developments in sacred architecture and show that although the architects of the first millennium B C E maintained important lines of continuity with the developments of the previous two millennia they were also capable of creating novel forms to meet new needs Included in this fascinating volume are 90 pages of photos drawings floor plans and maps

[Syria](#) Rajendra M. Abhyankar, 2020-09-08 The book focuses through multiple levels of

international reality on the pervasive and widespread effect of the Syrian civil war on the unravelling of established norms both global or national which have determined international relations during the last seven decades It postulates that since 2011 the Syrian situation has catalysed the breakdown of the international system based on the United Nations and the Bretton Woods institutions The core international values fostered by that system now laid waste among others are sovereignty non interference sanctity of UN Security Council approval for waging war human rights protection of civilian populations and the right of people to choose their own governments leaders By making the UNSC powerless in providing humanitarian assistance or fostering cease fire and peace making it has called into question the principles which have been held immutable for seventy years More importantly these norms have been breached by their originators The book takes a wider perspective melding together the civil war s international regional and national consequences to understand how and why this one event has radiated profound consequences for the international system

Early Civilizations of the Old World Charles Keith Maisels,2003-12-16 In this new paperback edition of *Early Civilizations of the Old World* Charles Keith Maisels traces the development of some of the earliest and key civilizations in history In each case the ecological and economic background to growth geographical factors cross cultural intersection and the rise of urbanism are examined explaining how particular forms of social structure and cultural interaction developed from before the Neolithic period to the time of the first civilizations in each area This volume challenges the traditional assumption of a band tribe chiefdom state sequence and instead demonstrates that large complex societies can flourish without social classes and the state as dramatically shown by the Indus civilization Such features as the use of Childe s urban revolution theory as a means of comparison for each emerging civilization and the discussion of the emergence of archaeology as a scientific discipline make *Early Civilizations of*

the Old World a valuable innovative and stimulating work
