Enterprise Systems Integration Diogo R. Ferreira, 2013-12-04 The field of enterprise systems integration is constantly evolving as every new technology that is introduced appears to make all previous ones obsolete Despite this continuous evolution there is a set of underlying concepts and technologies that have been gaining an increasing importance in this field Examples are asynchronous messaging through message queues data and application adapters based on XML and Web services the principles associated with the service oriented architecture SOA service composition orchestrations and advanced mechanisms such as correlations and long running transactions Today these concepts have reached a significant level of maturity and they represent the foundation over which most integration platforms have been built This book addresses integration with a view towards supporting business processes From messaging systems to data and application adapters and then to services orchestrations

and choreographies the focus is placed on the connection between systems and business processes and particularly on how it is possible to develop an integrated application infrastructure in order to implement the desired business processes For this purpose the text follows a layered bottom up approach with application oriented integration at the lowest level followed by service oriented integration and finally completed by process oriented integration at the topmost level The presentation of concepts is accompanied by a set of instructive examples using state of the art technologies such as Java Message Service JMS Microsoft Message Queuing MSMQ Web Services Microsoft BizTalk Server and the Business Process Execution Language BPEL The book is intended as a textbook for advance undergraduate or beginning graduate students in computer science especially for those in an information systems curriculum IT professionals with a background in programming databases and XML will also benefit from the step by step description of the various integration levels and the related implementation examples
