Neuroscience in Information Systems Research René Riedl,Fred D. Davis,Rajiv Banker,Peter H. Kenning,2017-01-25 This book shows how information systems IS scholars can effectively apply neuroscience expertise in ways that do not require neuroscience tools However the approach described here is intended to complement neuroscience tools not to supplant them Written by leading scholars in the field it presents a review of the empirical literature on NeuroIS and provides a conceptual description of basic brain function from a cognitive neuroscience perspective Drawing upon the cognitive neuroscience knowledge developed in non IS contexts the book enables IS scholars to reinterpret existing behavioral findings develop new hypotheses and eventually test the hypotheses with non neuroscience tools At its core the book conveys how neuroscience knowledge makes a deeper understanding of IS phenomena possible by connecting the behavioral and neural levels of analysis

Information Systems and Neuroscience Fred D. Davis,René Riedl,Jan vom Brocke,Pierre-Majorique Léger,Adriane B. Randolph,2016-10-05 This book presents the proceedings of the Gmunden Retreat on NeuroIS 2016 reporting on topics at the intersection of Information Systems IS research neurophysiology and the brain sciences Readers will discover the latest findings from top scholars in the field of NeuroIS which offer detailed insights on the neurobiology underlying IS behavior essential methods and tools and their applications for IS as well as the application of neuroscience and neurophysiological theories to advance IS theory Machine Learning for Neuroscience Chuck Easttom,2024 This book addresses the growing need for machine learning and data mining in neuroscience The book offers a basic overview of the neuroscience machine learning and the required math and programming necessary to develop reliable working models The material is presented in a easy to follow user friendly manner and is replete with fully working machine learning code

Dynamical Systems Approach To Cognition, The: Concepts And Empirical Paradigms Based On Self-organization, Embodiment, And Coordination Dynamics Wolfgang Tschacher, Jean-pierre Dauwalder, 2003-10-14 The shared platform of the articles collected in this volume is used to advocate a dynamical systems approach to cognition It is argued that recent developments in cognitive science towards an account of embodiment together with the general approach of complexity theory and dynamics have a major impact on behavioral and cognitive science The book points out that there are two domains that follow naturally from the stance of embodiment first coordination dynamics is an established empirical paradigm that is best able to aid the approach second the obvious goal directedness of intelligent action i e intentionality is nicely addressed in the framework of the dynamical synergetic approach

From Neuron to Cognition via Computational Neuroscience Michael A. Arbib, James J. Bonaiuto, 2016-11-11 A comprehensive integrated and accessible textbook presenting core neuroscientific topics from a computational perspective tracing a path from cells and circuits to behavior and cognition This textbook presents a wide range of subjects in neuroscience from a computational perspective It offers a comprehensive integrated introduction to core topics using computational tools to trace a path from neurons and circuits to behavior and cognition Moreover the chapters show how computational neuroscience methods for modeling the causal interactions underlying neural systems complements empirical research in advancing the understanding of brain and behavior The chapters all by leaders in the field and carefully integrated by the editors cover such subjects as action and motor control neuroplasticity neuromodulation and reinforcement learning vision and language the core of human cognition The book can be used for advanced undergraduate or graduate level courses It presents all necessary background in neuroscience beyond basic facts about neurons and synapses and general ideas about the structure and function of the human brain Students should be familiar with differential equations and probability theory and be able to pick up the basics of programming in MATLAB and or Python Slides exercises and other ancillary materials are freely available online and many of the models described in the chapters are documented in the brain operation database BODB which is also described in a book chapter Contributors Michael A Arbib Joseph Ayers James Bednar Andrej Bicanski James J Bonaiuto Nicolas Brunel Jean Marie Cabelguen Carmen Canavier Angelo Cangelosi Richard P Cooper Carlos R Cortes Nathaniel Daw Paul Dean Peter Ford Dominey Pierre Enel Jean Marc Fellous Stefano Fusi Wulfram Gerstner Frank Grasso Jacqueline A Griego Ziad M Hafed Michael E Hasselmo Auke Ijspeert Stephanie Jones Daniel Kersten Jeremie Knuesel Owen Lewis William W Lytton Tomaso Poggio John Porrill Tony J Prescott John Rinzel Edmund Rolls Jonathan Rubin Nicolas Schweighofer Mohamed A Sherif Malle

Garraghty, Maria V. Sanchez-Vives, Mathew E. Diamond, 2024-09-27 We are delighted to present the Horizons in Systems Neuroscience article collection This collection showcases high impact authoritative and reader friendly review articles covering the most topical research at the forefront of systems neuroscience All contributing authors were individually nominated by the Chief Editors of the Journal in recognition of their prominence and influence in their respective fields The cutting edge work presented in this article collection highlights the diversity of research performed across the entire breadth of the systems neuroscience field and reflects on the latest advances in the theory experiment and methodology with applications to compelling problems in academic and translational research [Towards a neuroscience of social interaction](#) Ulrich Pfeiffer, Bert Timmermans, Kai Vogeley, Chris Frith, Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i.e. social cognition from a detached observer's point of view asking study participants to read out the mental states of others without being engaged in interaction with them

Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context Specifically this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms Here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds For this Research Topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies By focusing on cutting edge research in social neuroscience and related fields this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social
