Systems and Theories in Psychology ,1975 Cognitive Psychology and Reading in the USSR J.

Downing, 1988-01-01 The ideas of Soviet specialists on the psychology and teaching of reading are here made available in English The volume gives an overview of psychology and education in the U S S R and presents translations of the work of major Soviet authors such as Elkonin and Luria The contributions offer many valuable proposals for teaching literacy which are guite unique outside of the Soviet Union A concluding chapter provides a commentary tracing the links between these specialist contributions and the general cognitive theories of Vygotsky The result of ten years of research this book was completed by Professor Downing shortly before he passed away in June 1987 Case Studies in Neuropsychology of *Reading* Elaine Funnell, 2013-12-16 Each chapter represents a personal account of a reading disorder through which details of the features of the disorder methods used for testing and theoretical accounts are illustrated Controversies are explained theories evaluated and anomalies pointed out From this emerges a picture of the central properties of each disorder and the contribution of each to our understanding of the reading system as a whole However the picture is not complete loose threads tantalise some findings are hard to explain and some newly controversial theories are put forward. The intention is to provide information that will help to equip the reader with the knowledge and expertise necessary to take the study of these reading disorders forward Intelligent Tutoring Systems Scott Crossley, Elvira Popescu, 2022-06-24 This volume constitutes the proceedings of the 18th International Conference on Intelligent Tutoring Systems ITS 2022 held in Bucharest Romania in June 2022 The 14 full papers 13 short papers and 11 poster papers presented in this volume were carefully reviewed and selected from 50 submissions The papers are categorized into the following topical sub headings Tools and Methods for learning Sciences and Practices Algorithms for Prediction Recommendation and Classification in Learning Systems Tutoring and Learning Systems New Approaches Framework and Theories **Proceedings of the Sixteenth** Annual Conference of the Cognitive Science Society Ashwin Ram, Kurt Eiselt, 2019-05-23 This volume features the complete text of all regular papers posters and summaries of symposia presented at the 16th annual meeting of the Cognitive Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to Science Society spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its

representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus the coordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research The Cognitive Development of Reading and Reading Comprehension Carol McDonald Connor, 2016-02-26 Learning to read may be the most complex cognitive operation that children are expected to master and the latest research in cognitive development has offered important insights into how children succeed or fail at this task The Cognitive Development of Reading and Reading Comprehension is a multidisciplinary evidence based resource for teachers and researchers that examines reading comprehension from a cognitive development perspective including the principal theories and methods used in the discipline The book combines research into basic cognitive processes genetics perception memory executive functioning and language with an investigation of the effects that context and environment have on literacy outcomes making clear how factors such as health family life community policy and ecology can influence children's cognitive development

Handbook of Reading Disability Research Anne McGill-Franzen, Richard Allington, 2010-09-17 Bringing together a wide range of research on reading disabilities this comprehensive Handbook extends current discussion and thinking beyond a narrowly defined psychometric perspective Emphasizing that learning to read proficiently is a long term developmental process involving many interventions of various kinds all keyed to individual developmental needs it addresses traditional questions What is the nature or causes of reading disabilities How are reading disabilities assessed How should reading disabilities be remediated To what extent is remediation possible but from multiple or alternative perspectives Taking incursions into the broader research literature represented by linguistic and anthropological paradigms as well as psychological and educational research the volume is on the front line in exploring the relation of reading disability to learning and language to poverty and prejudice and to instruction and schooling The editors and authors are distinguished scholars with extensive research experience and publication records and numerous honors and awards from professional organizations representing the range of disciplines in the field of reading disabilities Throughout their contributions are

Staats, Leendert P. Mos, 2012-12-06 I have been involved in constructing a unified theory for many years in considering the state of psychology's unity disunity and in generally attempt ing to persuade our profession to work on its unification In this work I have had the opportunity to become acquainted with the works of a number of other psychologists whose statements indicated that they had something to say on these topics I saw also that it would be very productive for psychology to have these individuals address themselves to psychology s disunity unity considered as a problem that should be confronted and addressed In 1983 I began to indicate that it was my intention to devote a book to the topic as seen through the eyes of a group of prominent psychologists concerned with related issues It was very fortunate from my standpoint that Joseph Royce and later Leendert Mos who were editing this series were interested in this book I accepted the former s invitation to do within the present series the book I had planned Although I must assume responsibility for selection of the contributors for the book s organization and for the first editing of their papers for substance Pro fessor Mos offered to help in an editorial capacity and I am most grateful for his contributions to the formal editing The volume is much improved as a result of his careful efforts which in one case involved rewriting material The Routledge Handbook of the English Writing System Vivian Cook, Des Ryan, 2016-07-15 The Routledge Handbook of the English Writing System provides a comprehensive account of the English writing system both in its current iteration and highlighting the developing trends that will influence its future Twenty nine chapters written by specialists from around the world cover core linguistic and psychological aspects and also include areas from other disciplines such as typography and computer mediated communication Divided into five parts the volume encompasses a wide range of approaches and addresses issues in the following areas theory and the English writing system discussing the effects of etymology and phonology the history of the English writing system from its earliest development including spelling pronunciation and typography the acquisition and teaching of writing with discussions of literacy issues and dyslexia English writing in use around the world both in the UK and America and also across Europe and Japan computer mediated communication and developments in writing online and on social media The Routledge Handbook of the English Writing System is essential reading for researchers and postgraduate students working in this area Handbook of Visual Communication Kenneth L. Smith, Sandra Moriarty, Keith Kenney, Gretchen Barbatsis, 2004-12-13 This Handbook of Visual Communication explores the key theoretical areas in visual communication and presents the research methods utilized in exploring how people see and how visual communication occurs With chapters contributed by many of the best known and respected scholars in visual communication this volume brings together significant and influential work in the visual

communication discipline The theory chapters included here define the twelve major theories in visual communication scholarship aesthetics perception representation visual rhetoric cognition semiotics reception theory narrative media aesthetics ethics visual literacy and cultural studies Each of these theory chapters is followed by exemplar studies in the area demonstrating the various methods used in visual communication research as well as the research approaches applicable for specific media types The Handbook serves as an invaluable reference for visual communication theory as well as a useful resource book of research methods in the discipline It defines the current state of theory and research in visual communication and serves as a foundation for future scholarship and study As such it is required reading for scholars researchers and advanced students in visual communication and it will be influential in other disciplines in which the visual component is key including advertising persuasion and media studies. The volume will also be useful to practitioners seeking to understand the visual aspects of their media and the visual processes used by their audiences Handbook of Child Psychology, Theoretical Models of Human Development William Damon, Richard M.
