**Systems Thinking for Management Consultants** Rajneesh Chowdhury, 2019-06-20 This book discusses how systems thinking and approaches can aid management consultants in navigating the complexities of client advisory in current realities. It thereby brings to the forefront aspects of holism, flexibility, and responsibility, the keys to success in today's world. Management consultants are called in to offer an independent expert view of an organisation, a situation, and are expected to address some of the most pressing problems businesses face. The client does not exist in a silo but in a complex environment that lies at the intersection of a range of internal and external factors that are often unseen and unpredictable. The organisation itself presents an alien territory that the consultant is expected to acclimatise to within a very short period of time and come up with solutions that insiders would not have been able to visualise. The book presents a range of ideas, concepts, and reference cases that are relevant and topical for consultants in their daily work. It argues that systems thinking allows holism and flexibility in management consulting while holism is about the ability to encompass the environmental and organisational complexity; flexibility is about the ability to think creatively and adopt different approaches to accommodate this complexity. With commentaries, case studies, conceptual models, and perspectives that cut across multiple industries, sectors, and countries, this book is a valuable resource for academics and professionals alike. The book's inner pages and its page on Springer.com contain additional comments providing perspectives of clients, industry experts, and academia.

[Mapping Environmental Sustainability](#) Oreszczyn, Sue, Lane, Andy, 2017-09-06 Environmental sustainability involves the interaction of a number of complex adaptive systems that rely on an understanding of human relationships and perspectives that are widely contested. Mapping Environmental Sustainability explains how visual mapping techniques based on systems concepts and theories can be used to facilitate explore and capture the different understandings of the relationships, perspectives, and boundaries involved in environmental sustainability to obtain a more complete comprehension of the concept and develop plans for action.
