T Cell Subsets Cellular Selection Commitment And Identity:

T Cell Subsets, 2004-06-26 This first thematic issue of the Advances in Immunology series highlights the remarkable new insights into the mechanisms that govern development and function of T cell lineages Recent developments in the understanding of the genetic and epigenetic mechanisms that regulate development of the two major T cell lineages will have a fundamental impact on a number of research fields immunology cell biology hematology and stem cell research All of these groups have a vested interest in comprehending issues such as stem cell self renewal progenitor plasticity lineage commitment and cellular identity Immunologists have a special interest in the mechanisms that allow selection of a T cell repertoire whose members integrate genetic information for T cell receptor co receptor and specialized immunologic function since this process lies at the core of adaptive immunity T Cell Subsets is a timely and invaluable review for immunologists cell biologists hematologists and stem cell researchers **T-Cell Subsets: Cellular Selection**, 2004

Thymic Development and Selection of T Lymphocytes Thomas Boehm, Yousuke Takahama, 2013-11-06 The thymus is an evolutionarily ancient primary lymphoid organ common to all vertebrates in which T cell development takes place Failing thymus function is associated with immunodeficiency and or autoimmunity In this volume leading experts provide a comprehensive overview of recent advances in thymopoiesis research The chapters cover the development of the thymic epithelial microenvironment address the formation of a diverse and self tolerant repertoire of T cell receptors as the basis for cellular immunity discuss the mechanisms by which progenitor cells colonize the thymus and detail the molecular basis for T lineage decisions The reviews illustrate the important role of the multifaceted process of thymopoiesis for adaptive immunity

Epigenetic Regulation of Lymphocyte Development Cornelis Murre, 2012-02-07 The studies described in this volume serve as a starting point to familiarize one self with the multifarious differences in epigenetic designs that orchestrate the progression of developing blood cells They also may serve as a general paradigm for the mechanisms that underpin the control of eukaryotic gene expression **Transcriptional and Chromatin Regulation in Adaptive and Innate Immune Cells** Keiko Ozato, Dinah S. Singer, 2020-05-22 Transcription depends on an ordered sequence of events starting with i setting of the enhancer and chromatin environment ii assembly of DNA binding and general transcription factors iii initiation elongation processing of mRNA and termination followed by iv creation of epigenetic marks and memory formation Highlighting the importance of these activities more than 10% total genes are dedicated to regulating transcriptional mechanisms This area of research is highly active and new insights are continuously being added to our knowledge Cells of the immune system have unique features of gene regulation to support diverse tasks required for innate and adaptive immunity Innate immunity involves the recognition of external infectious and noxious agents as well as internal cancer cell components and the elimination of these agents by non specific mechanisms Adaptive immunity involves gene rearrangement to achieve highly specific T and B cell responses imparting the capability of self and non self discrimination This requires

transcription and epigenetic regulation Adaptive immunity also employs epigenetic memory enabling recapitulation of prior transcription Recent advances in nuclear architecture chromatin structure and transcriptional regulation have provided new insights into immune responses The increased understanding of these molecular mechanisms is now affording opportunities to improve therapeutic strategies for various diseases **Cumulated Index Medicus** ,1985 **Molecular and Cellular Pathways in NK Cell Development** Ewa Sitnicka,Yenan Bryceson,Aharon Freud,Emily Mace,2020-09-02 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org about contact

Rothenberg,2013-03-14 Despite the tremendous diversity of the cells of the hematopoietic system they are all derived from common precursor cells that are generated in the fetus and persist into adult life In this regard Band T lymphocytes which comprise the two arms of the antigen specific and inducible immune system though functionally very different are descendants of the same stem cell precursor In the past several years we have witnessed an explosion of information regarding the process by which differentiation of B and T cells from stem cells occurs This information like the answers to

most important biological questions has come from multiple and diverse directions Because all hematopoietic cells arise from common precursors complex regulatory processes must be involved in determining commitment to various lineages Understanding commitment to the B or T cell lineage remains incomplete however identification of transcription factors necessary for progression along specific B and T cell pathways suggests that we are on the verge of understanding the molecules involved in the initial fate determining steps Studies of this type previously could be accomplished only in nonmammalian systems that are more amenable to genetic approaches However new technologies allow increasingly elegant and informative studies in mammalian systems particularly for cells of the hematopoietic system CSIR NET Life Science - Unit 14 - Immunology Mr. Rohit Manglik,2024-07-15 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels **Cell Lineage Choice During Haematopoiesis: A Commemorative Issue in Honor of Professor Antonius Rolink** Geoffrey Brown,Rhodri Ceredig,2018-11-13 This book is a printed edition of the Special Issue Cell Lineage Choice During Haematopoiesis A Commemorative Issue in Honor of Professor Antonius Rolink that was published in IJMS
