

Acute Inflammatory Dermatoses:

Erythema Multiforme

- **Hypersensitivity response to certain drugs and/or infections**
 - Drugs: sulfonamides, penicillin, salicylates, antimalarials
 - Infections: herpes simplex virus, mycoplasma, fungi
- **Pathogenesis:**
 - T-cell mediated reaction similar to eczema
- **Clinical features:**
 - “target lesions” blister surrounded by red rim
 - Microscopically shows “margination” of lymphocytes at dermal-epidermal boundary and basal epidermal necrosis.
 - Broad range of severity from minor (e.g. herpesvirus reaction) to severe (systemic drug reaction)
 - If severe can lead to loss of significant areas of epidermis

Immune-Mediated Inflammatory Skin Diseases Angelo Ruggiero,Matteo Megna,Sonia Sofia Ocampo Garza,2023-06-29 Practical Immunodermatology Xing-Hua Gao,Hong-Duo Chen,2016-12-23 This book discusses typical skin diseases from an immunological point of view introducing the latest immunological techniques and practices It begins with a brief overview of the human immune system including the basic concepts and principles as well as the general symbols used in immunology Part Two describes the human skin as an integral part of the immune system explaining the immunological roles of major cellular and molecular composites in the skin Part Three illustrates typical skin diseases that have immunological involvement immunodermatological conditions It describes 40 skin diseases focusing on immunological causes pathogenesis pattern of reaction and treatment choices and responses The final part discusses advanced immunodiagnostics and immunotherapy in dermatology providing detailed descriptions of immune techniques for the diagnosis of skin diseases their principles and background indications requirements for sampling test protocols interpretation of results and trouble shooting This work offers insights into both the systemic immune system and the skin immune system and integrates the information into discussions of clinical diseases relevant immune techniques and

immunological drugs Presenting the latest advances in clinical immunology it is an invaluable resource for dermatologists residents and graduate students in dermatology *Impact of the Innate and Adaptive Immune System in Driving Type 1 Inflammatory Skin Disease* Barbara Meier-Schiesser, Judit Danis, Mark Mellett, 2025-02-25 Inflammatory skin diseases are frequent in number and often lead to a decreased quality of life in the affected patients These diseases result from a complex interplay between the innate and adaptive immune systems Type 1 inflammation is an immune response driven primarily by Th1 cells which secrete pro inflammatory cytokines notably Interferon gamma The initiation of Type 1 inflammation is typically triggered by the recognition of antigens associated with intracellular pathogens Dendritic cells present these antigens to naive T cells leading to the differentiation of predominantly Th1 cells which in turn activate other immune cells including macrophages and cytotoxic T cells In chronic inflammation the infiltration of T cells drives the perpetuating cycle of inflammation at the epidermal barrier Th1 induced inflammation can synergize with recruitment and heightened activity of other T cell subsets such as Th17 cells Typical type 1 inflammatory skin diseases include psoriasis lichen planus acne hidradenitis suppurativa pityriasis rubra pilaris adverse cutaneous drug eruptions and autoimmune disorders such as vitiligo and lupus erythematoses **T Lymphocytes Subpopulations in Immunotoxicology** Ian Kimber, Mary Jane K. Selgrade, 1998-08-17 T Lymphocyte Subpopulations in Immunotoxicology Edited by Ian Kimber ZENECA Pharmaceuticals Central Toxicology Laboratory Macclesfield Cheshire UK and Mary Jane K Selgrade US Environmental Protection Agency National Health and Environmental Effects Research Laboratory NC USA Immunotoxicology is a diverse discipline that embraces the investigation of the adverse health effects that may result from the interaction of xenobiotics with the immune system T lymphocytes orchestrate adaptive immune responses and are of central importance in the consideration of immunotoxicity These cells and or the tissue responsible for their functional maturation the thymus have been implicated as the primary or secondary targets for chemical insult Moreover T lymphocytes play pivotal roles in the induction and elicitation of chemical and protein allergy and in the pathogenesis of autoimmune disease Classically T lymphocytes have been divided into two main populations CD4 helper T cells and CD8 suppressor cytotoxic T cells It is now apparent that there exists within both populations considerable functional heterogeneity characterized usually by variable cytokine secretion patterns Two major subpopulations of T helper Th cells have been identified and designated Th1 and Th2 with similar but less well characterized sub types of cytotoxic Tc cells having been described also The discovery of functional subpopulations of Th and Tc cells has profoundly influenced our view of the immune response and in particular our appreciation of the way in which the immune system can tailor responses to meet challenges of different types This has also translated into a much more detailed understanding of certain immunopathologic processes and the role of T lymphocytes in the development of allergic autoimmune and inflammatory diseases This book explores the role of T lymphocyte subpopulations in the development and expression of immunotoxic effects Constituent chapters reveal that a consideration of the impact of

chemicals on these diverse T cell populations and the polarization of T cell responses has already contributed greatly to our understanding of the mechanisms underlying immunotoxicity including immune suppression and allergic and autoimmune responses

Inflammatory Dermatoses: The Basics Bruce R. Smoller,Kim M. Hiatt,2010-06-17 *Inflammatory Dermatoses The Basics* will serve as an effective and efficient handbook for the student of dermatopathology and as a practical bench reference for the practicing diagnostician who desires rapid access to criteria that are useful in differentiating histologically similar entities The reader will be able to focus upon a single histologic observation i e inflammatory conditions without epidermal changes and use this as a starting point from which to build a differential diagnosis based upon pattern recognition As each entity is addressed there will be a concise discussion of the basic clinical findings and epidemiologic associations This will be followed by a histologic description highlighting areas that serve to discriminate between the entity under discussion and similar ones Any immunologic studies that might augment the diagnostic sensitivity or specificity will be discussed The chapters are thematically based and consist of essential bullet points arranged in organized outlines allowing for easy access and direct comparison between entities The salient histologic features are depicted with abundant high quality full color photomicrographs placed immediately adjacent to the appropriate histologic bullet points This volume will serve as an effective and efficient handbook for the student of dermatopathology and as a practical bench reference for the practicing diagnostician who desires rapid access to criteria that are useful in differentiating histologically similar entities The elaborate pictorial documentation will also enable the book to serve as an atlas of the commonest dermatologic disorders

Mucosal T Cells T. T. MacDonald,1998-07 There are more T cells in the

gastrointestinal tract and lung than in the rest of the body combined The aim of this book is to cover all the important aspects of the biology of these cells in animals and in man Basic observations are described as well as disease states where aberrant activation of mucosal T cells causes tissue damage The continuing discovery of features of mucosal T cells which make them different from T cells in the periphery is a consistent theme throughout the text Topics discussed include new developments in understanding why the characteristic response of mucosal T cells to soluble antigens is tolerance the role of the gut epithelium in intestinal immunity the molecular basis by which T cells home to the gut mucosa the functions of gammadelta T cells the discovery of a new lymphoid organ the cryptopatch in the mouse gut and the remarkable oligoclonality of the alphabeta and gammadelta T cells in the gut epithelium In more disease related sections the way in which T cells play a role in asthma and protection from parasite infection and how they cause inflammatory bowel disease in man and animals are described Providing an excellent survey of the field this book is a valuable resource for both basic scientists and clinicians interested in intestinal immunology and gastrointestinal disease Severe Skin Diseases in Children Wynn L.
