T Cell Subsets In Infectious And Autoimmune Diseases:

T Cell Subsets in Infectious and Autoimmune Diseases Derek J. Chadwick, Gail Cardew, 2008-04-30 T cells are a specialized population of immune cells that aid the immune system in combating various types of invading pathogens This book presents up to the minute data on the role of T cells in autoimmune diseases **Infection and Autoimmunity** Naim Mahroum, Abdulla Watad, Yehuda Shoenfeld, 2023-12-23 In 2020 we lost Noel Rose co editor of the classic Infection and Autoimmunity To honor and respect his work a group of experts in the field have taken the initiative to make this book perpetual The third edition of Infection and Autoimmunity updates all the recent and leading papers on infection and autoimmunity in addition to a dedicated section on to the correlation between SARS CoV 2 infection and autoimmunity From the very beginning of the COVID 19 pandemic numerous papers have been published including studies conducted by the editors and authors of the book on COVID 19 and autoimmunity and therefore this knowledge has been incorporated into this new edition The addition and extended coverage on SARS CoV 2 COVID 19 and autoimmunity are pivotal for the third edition of the book due to the COVID 19 pandemic Medical students and practitioners as well as academic staff in medical schools globally are enthusiastic in searching for better understanding of the correlation between infection and autoimmunity in general and the long term effects of SARS CoV 2 and COVID 19 on the immune system in particular especially in terms of autoimmunity related to the virus Fully revised and updated by a global group of experts dedicated to and in honor of Noel Rose Includes 52 completely updated chapters with the latest developments in the field Is the only book directed specifically at the interactions between infectious agents and autoimmunity Describes the prevalence and incidence of global issues and current therapeutic approaches Addresses in full details of the mechanisms behind the emergence of autoimmune diseases secondary to infections Brings the reader up to date and allows easy access to individual topics in one place **NK Cell Subsets in Health and Disease: New Developments** Emanuela Marcenaro, Luigi D. Notarangelo, Jordan S. Orange, Eric Vivier, 2017-11-29 Natural Killer NK cells were discovered ca 1975 as the first group of lymphoid cells that were neither T cells nor B cells Since then the dissection of the biology of NK cells has been growing exponentially with many seminal discoveries from the identification of MHC class I specific inhibitory receptors to the discovery of receptor ligand pairs involved in NK cell activation and to the manipulation of NK cells in cancer In this research topic we asked a group of thought leaders in NK cell biology to review recent advances in their origins and biology and their roles in cancer infection and inflammation Together these 25 articles provide a timely survey of NK cells as critical immunologic components of health and disease They will hopefully prompt further dialogue and developments in basic and translational immunology **The Interplay Between Immune Activation and Cardiovascular Disease During Infection, Autoimmunity and Aging: The Role of T Cells** Marta Catalfamo, Sara Ferrando-Martinez, Eva Reali, 2021-08-25 **CD4+ T cell differentiation in infection: amendments to the Th1/Th2 axiom** Dragana Jankovic, Carl G Feng, 2015-06-03 CD4 T lymphocytes play an essential role in

host defense against bacterial parasitic and viral infections During infection under the influence of intrinsic signals received through peptide MHC TCR interactions and extrinsic signals provided by pathogen conditioned dendritic and other accessory cells CD4 T cells proliferate and differentiate into specialized T helper Th effectors which produce distinct sets of cytokines tailored to combat a specific class of microbes The concept of CD4 T cell multi functionality was developed after the seminal discovery of Th1 and Th2 cells nearly 30 years ago Although the Th1 Th2 paradigm has successfully withstood the test of time in the past decade additional Th subsets Th17 Tfh Th22 Th9 have been identified Similarly single cell analyses of cytokines and master transcriptional factors have revealed that at the population level CD4 T cell responses are far more heterogeneous than initially anticipated While some of the checkpoints in Th cell specification have been identified recent studies of transcriptional and epigenetic regulation have uncovered a significant flexibility during the course CD4 T lymphocyte polarization In addition Th cells expressing cytokines with counteracting functions as a measure of self regulation display yet another level of diversity Understanding the mechanisms that control the balance between stability vs plasticity of Th effectors both at the time of initiation of immune response and during development of CD4 T cell memory is critical for the rational design of better vaccines and new immunotherapeutic strategies This research topic will cover current views on Th cell development with a focus on the mechanisms that govern differentiation function and regulation of effector Th cells in the context of microbial infections

The Heart in Systemic Autoimmune Diseases Andrea Dorea, 2004-01-20 This first volume represents the state of the art in the field of cardiovascular disease and autoimmune rheumatic diseases Systemic autoimmune diseases comprise a family of conditions that share common pathogenetic mechanisms as well as a multi organ involvement including the heart This volume has been subdivided into three parts In the first part the immune mechanisms involved in cardiac damage have been considered The role of proinflammatory and regulatory cytokines in driving an autoimmune response to cardiac self tissues has been analysed Moreover the prevalence the clinical meaning and the hypothetical pathogenicity of a broad spectrum of organ and non organ specific autoantibodies have been discussed in detail In the second part of the volume the role of humoral and innate immunity in promoting the development of atherosclerotic plaque has been extensively reviewed along with the newly discovered anti inflammatory properties of statins These two parts of the volume deal with exciting aspects of this topic suggesting a very close connection between heart diseases and immunology Finally in the third part the cardiac manifestations observed in the major systemic autoimmune conditions have been comprehensively examined This book yields an impressive body of well ordered information highlighting key references and summarising the experience of a selected panel of distinguished physician scientists actively involved in the field of cardiovascular disease and systemic autoimmunity

Recent Advances in Immunology to Target Cancer, Inflammation and Infections Jagat Kanwar,2012-05-09 Immunology is the branch of biomedical sciences to study of the immune system physiology both in healthy and diseased states Some aspects of autoimmunity draws our attention to the fact that it is not always associated with pathology For instance autoimmune reactions are highly useful in clearing off the excess unwanted or aged tissues from the body Also generation of autoimmunity occurs after the exposure to the non self antigen that is structurally similar to the self aided by the stimulatory molecules like the cytokines Thus a narrow margin differentiates immunity from auto immunity as already discussed Hence finding answers for how the physiologic immunity turns to pathologic autoimmunity always remains a question of intense interest However this margin could be cut down only if the physiology of the immune system is better understood The individual chapters included in this book will cover all the possible aspects of immunology and pathologies associated with it The authors have taken strenuous effort in elaborating the concepts that are lucid and will be of reader s interest

Therapeutic Modality to Cure Autoimmune Diseases Ce Wang,Guobao Chen,Qi Wan,Feng Dong,Timothy Radstake,Asif Amin Dar ,Sergio Piñ Piñeiro,2025-08-07 Autoimmune diseases represent a significant medical challenge where the body s immune system mistakenly attacks its own tissues leading to chronic inflammation and serious health ramifications The traditional treatment regime generally suppresses the immune system broadly offering only symptomatic relief and increasing susceptibility to infections However recent strides in understanding the immune system coupled with breakthroughs in technology have sparked a new wave of treatments aimed at specific pathogenic pathways to restore balance and potentially offer a lasting cure without compromising overall immune function This research topic aims to explore the spectrum of innovative therapies that specifically target critical components driving disease progression in autoimmune conditions We aim to highlight recent advancements in technologies such as CAR T therapies targeted protein degradation and nucleotide based therapies which hold the promise of drug free remission and potential cures by focusing precisely on pathogenic cells without overall immune suppression
