## **Tackling Transportation:**

*Tackling Transport* Helmuth Trischler, Stefan Zeilinger, 2003 In this book historians from museums and academia examine transport artefacts and the systems of mobility in which they are embedded Large artefacts such as the Stephenson's Rocket locomotive a Lockheed F 104 Starfighter a Ford Model T are impressive manifestations of engineering ingenuity They help museum visitors understand the design and use of the technologies that move people and goods But they are also historical icons so different audiences be they professional historians of technology or casual visitors will interpret them in different ways In a transport exhibition individual artefacts can dominate a visitor's attention overwhelming the themes expressed by other material The power of such an artefact helps to attract interest but at the same time endangers its incorporation into a larger system Curators have to find ways to demonstrate the systemic nature of transport by integrating these objects with others the smaller component artefacts such as electrochemical batteries pneumatic tyres and dashboards and the social artefacts such as drivers consumers rules and institutions The authors consider a variety of transport artefacts from pioneering steam locomotives and early automobile interiors to jet engines and the automatically guided cars of the future Those with curatorial responsibilities also reflect on how theoretical notions about transport can be expressed in the practical context of a museum and how a reappraisal of visitors' responses to transport artefacts is leading to new ways of showcasing the history of mobility

**Quick Bibliography Series**, 1976 *Applied Research in Environmental Economics* Christoph Böhringer, Andreas Lange, 2006-03-30 Sustainable development climate policy and biodiversity conservation are

examples of issues on the current political agenda in many countries. These themes are also subject to economic research and economic insights are increasingly finding their way into the design of environmental policy. Still, the reception of academic findings by policy makers as well as the timely identification of policy relevant questions by economic researchers often seem to be problematic. This volume attempts to vitalise the exchange between policy makers and academics. It offers a snapshot of environmental economic research on a range of policy relevant problems. Academic contributions are complemented by views of policy makers on priority fields in environmental policy, the usefulness of academic research for decision making and requirements to applied research in the future.

Transport Challenges in Latin American Cities José Manuel Vassallo, Paola Carolina Bueno, 2019-02-13 Most cities of the Latin America and the Caribbean region face similar problems including low quality public transport, supply lack of planning, congestion and both atmospheric and noise pollution. As a response to these growing concerns, many governments are implementing actions aimed at encouraging the use of more sustainable transport modes and reducing transport dependence on the private car. Despite the advances gained through the implementation of these and other policies in LAC, there is still a long way to go, especially in the promotion of seamless transport systems at the city level, the achievement of financial sustainability as well as the improvement of urban air quality. This study identifies a number of best practices for overcoming or working around these challenges.

The Social-Structural Determinants of Health Sofie Hass, Jessica R. Corno, Aida Wisecup, 2025-07-29 Today more than ever, society is faced with the unequivocal question of developing a better understanding of the interconnectedness between social forces, environmental experiences and the outcomes of mental and physical health and well-being. Post COVID-19 considerations have led to an unprecedented need to establish a more interdisciplinary understanding of the role that social construction has on health and illness and the diverse set of ways that our social world plays in the identification, treatment and experience of various diseases and health-related conditions. Social life is intricately linked to quality of life variables related to health, both mental and physical. Thus, we recognize the invaluable contribution to the field of medicine made by a comprehensive understanding of health, wellness and social functioning as a byproduct of the study of the human body and mind. However, we posit that this knowledge would be incomplete without examining the close relationship between health, wellness and those aspects of social environment that create conditions that can either strengthen or undermine the wellbeing of individuals, groups of people and entire communities: the social structural determinants of health.
