Despite the importance of preserving the environment in our developing world activity involving the extraction of natural resources and the disposal of waste continues to increase Such operations need to be conducted in a carefully controlled manner protecting both the natural environment and the communities who live in the vicinity Every four years the GREEN Geotechnics Related to the Environment symposia are held recognizing the major contribution that geotechnical engineering makes towards achieving the afore mentioned goals The meeting provides an international forum for the exchange of ideas experiences and innovations The GREEN 4 meeting discussed engineered disposal of waste in landfills land contaminated by waste disposal and fluid flows industrial waste dumps from mineral mining and extraction and environmental management The book contains expertise from nineteen countries around the world and provides an integrated view of the latest research and practice in waste disposal New and evolving ideas ongoing concerns and developments throughout the world are discussed **Mine Wastes** Bernd Lottermoser, 2007-08-26 This book is not designed to be an exhaustive work on mine

wastes It aims to serve undergraduate students who wish to gain an overview and an understanding of wastes produced in the mineral industry An introductory textbook addressing the science of such wastes is not available to students despite the importance of the mineral industry as a resource wealth and job provider Also the growing importance of the topics mine wastes mine site pollution and mine site rehabilitation in universities research organizations and industry requires a textbook suitable for undergraduate students till recently undergraduate earth science courses tended to follow rather classical lines focused on the teaching of palaeontology crystallography mineralogy petrology stratigraphy sedimentology structural geology and ore deposit geology However day and in the future earth science teachers and students also need to be familiar with other subject areas In particular earth science curriculums need to address land and water degradation as well as rehabilitation issues These topics are becoming more important to society and an increasing number of earth science students are pursuing career paths in this sector Mine site rehabilitation and mine waste science are examples of newly emerging disciplines This book has arisen out of teaching mine waste science to undergraduate and graduate science students and the frustration at having no appropriate text which documents the scientific fundamentals of such wastes
