Takahe Fifty Years Of Conservation Management And Research:

Reintroduction Biology John G. Ewen, Doug P. Armstrong, Kevin A. Parker, Philip J. Seddon, 2012-01-30 This book aims to further advance the field of reintroduction biology beyond the considerable progress made since the formation of the IUCN SSC Re introduction Specialist Group Using an issue based framework that purposely avoids a structure based on case studies the book s central theme is advocating a strategic approach to reintroduction where all actions are guided by explicit theoretical frameworks based on clearly defined objectives Issues covered include husbandry and intensive management monitoring and genetic and health management Although taxonomically neutral there is a recognised dominance of bird and mammal studies that reflects the published research in this field The structure and content are designed for use by people wanting to bridge the research management gap such as conservation managers wanting to expand their thinking about reintroduction related decisions or researchers who seek to make useful applied contributions to reintroduction **The**

Takahe William George Lee, William G. Lee, Ian G. Jamieson, Ian George Jamieson, 2001 The takahe is a large flightless herbivorous bird found in New Zealand Nine contributions from the joint conference of the Ecological Societies of Australia and New Zealand reflect on attempts to conserve the takahe since its rediscovery after presumed extinction in 1948 A sampling of topics includes the origins and prehistoric ecology of takahe population trends dynamics and problems of fjordland takahe and captive rearing Conservation Biology and Applied Zooarchaeology Steve Wolverton, R. Lee Lyman, 2012-12-01 Until now the research of applied zooarchaeologists has not had a significant impact on the work of conservation scientists This book is designed to show how zooarchaeology can productively inform conservation science Conservation Biology and Applied Zooarchaeology offers a set of case studies that use animal remains from archaeological and paleontological sites to provide information that has direct implications for wildlife management and conservation biology It introduces conservation biologists to zooarchaeology a sub field of archaeology and ethnobiology and provides a brief historical account of the development of applied zooarchaeology The case studies which utilize palaeozoological data cover a variety of animals and environments including the marine ecology of shellfish and fish potential restoration sites for Sandhill Cranes freshwater mussel biogeography and stream ecology conservation of terrestrial mammals such as American black bears and even a consideration of the validity of the Pleistocene rewilding movement The volume closes with an important new essay on the history value and application of applied zooarchaeology by R Lee Lyman which updates his classic 1996 paper that encouraged zooarchaeologists to apply their findings to present day environmental challenges Each case study provides detailed analysis using the approaches of zooarchaeology and concludes with precise implications for conservation biology Essays also address issues of political and social ecology which have frequently been missing from the discussions of conservation scientists As the editors note all conservation actions occur in economic social and political contexts Until now however the management implications of zooarchaeological research have rarely been spelled out so

clearly **Conservation Behavior** Oded Berger-Tal, David Saltz, 2016-05-03 Conservation behavior assists the investigation of species endangerment associated with managing animals impacted by anthropogenic activities. It employs a theoretical framework that examines the mechanisms, development, function, and phylogeny of behavior variation in order to develop practical tools for preventing biodiversity loss and extinction. Developed from a symposium held at the International Congress on Conservation Biology in 2011, this is the first book to offer an in-depth logical framework that identifies three vital areas for understanding conservation behavior: anthropogenic threats to wildlife conservation and management protocols and indicators of anthropogenic threats. Bridging the gap between behavioral ecology and conservation biology, this volume ascertains key links between the fields, explores the theoretical foundations of these linkages, and connects them to practical wildlife management tools and concise, applicable advice. Adopting a clear and structured approach throughout, this book is a vital resource for graduate students, academic researchers, and wildlife managers. **The Woodhen** Clifford

Frith, 2013-06-12 This book tells the fascinating success story of saving the flightless Woodhen of Lord Howe Island. This unique large rail, an iconic and highly endangered Australian bird, was at the very brink of extinction with just 15 individuals found in 1980 when bold and risky actions were taken to save it. The book begins with the discovery and ecology of Lord Howe Island. It then details the history of the Woodhen, its place among the rails, and their evolution of flightlessness, the planning, implementation, and trials, tribulations, and successes of the captive breeding programme, and the way in which the wild population recovered. The ecology, behaviour, and breeding biology of this unique flightless island rail are also discussed. The text is accompanied by numerous photographs and drawings. This is a story of survival yet the bird remains highly endangered as it is under constant potential threat which could tip it over the brink and to extinction. The Woodhen provides gripping insights into the potential for both losing and saving vertebrate species. Winner of a 2014 Whitley Awards Certificate of Commendation for Historical Zoology. Species Conservation Jamieson A. Copsey, Simon A. Black, Jim J.

Groombridge, Carl G. Jones, 2018-06-28 This book brings together leading conservation practitioners to reflect on their response to the current global biodiversity crisis through the lens of island species recovery and management. Initial chapters cover the biological understanding of small population biology and the growing threat of invasive species, while subsequent chapters discuss the management of these threats and the complexity of leading projects within a dynamic and still relatively unknown system. Multiple case studies from islands worldwide illustrate key points, allowing readers to draw on the first-hand practical experience of experienced professionals. This resource will be invaluable to both current and future conservation professionals, helping them to go beyond disciplinary comfort zones and develop, manage, and lead projects over extensive timeframes in a way that brings others with them on the journey. **Ecology** Michael Begon, Colin R. Townsend, 2020-11-11 A definitive guide to the depth and breadth of the ecological sciences, revised and updated. The revised and updated fifth edition of *Ecology: From Individuals to Ecosystems* now in full colour offers students and practitioners a review of the

ecological sciences The previous editions of this book earned the authors the prestigious Exceptional Life time Achievement Award of the British Ecological Society the aim for the fifth edition is not only to maintain standards but indeed to enhance its coverage of Ecology In the first edition 34 years ago it seemed acceptable for ecologists to hold a comfortable objective not to say aloof position from which the ecological communities around us were simply material for which we sought a scientific understanding Now we must accept the immediacy of the many environmental problems that threaten us and the responsibility of ecologists to play their full part in addressing these problems This fifth edition addresses this challenge with several chapters devoted entirely to applied topics and examples of how ecological principles have been applied to problems facing us highlighted throughout the remaining nineteen chapters Nonetheless the authors remain wedded to the belief that environmental action can only ever be as sound as the ecological principles on which it is based Hence while trying harder than ever to help improve preparedness for addressing the environmental problems of the years ahead the book remains in its essence an exposition of the science of ecology This new edition incorporates the results from more than a thousand recent studies into a fully up to date text Written for students of ecology researchers and practitioners the fifth edition of Ecology From Individuals to Ecosystems is an essential reference to all aspects of ecology and addresses environmental problems of the future

Biological Invasions in New Zealand Robert B. Allen, William G. Lee, 2006-07-04 Man's recent colonization of New Zealand has dramatically altered the resident biota and resulted in the introduction of numerous alien organisms to these once remote islands In reverse there is increasing evidence of a lesser known export of species to other regions of the world This volume presents an in depth review of the level and rate of such invasions and investigates what controls the success of invaders and the consequences for ecosystems both on land and offshore It provides invasion biologists everywhere with tests of current theories about those factors leading to the success of invaders as well as evaluating principles for understanding the nature of their impacts that form a solid basis for the effective management of biological invasions worldwide

New Environmentalism Chris R. de Freitas, Martin Perry, 2012-05-15 This book explains the role of New Zealand's environmental agencies and regulatory legislation taking in the impact of international agreements and treaties It traces the fortunes of sustainable policy approaches and analyzes the activities of the public agencies charged with managing the environment Moving on to a detailed thematic status report on New Zealand's environment it examines rural freshwater coastal oceanic atmospheric and urban zones Finally chapters detail public perceptions and normative environmental values as well as the depth of business commitment to environmental responsibility An ideal introduction to the topic for a diverse range of scholars the book eschews any specific theoretical framework in charting the recent evolution current operation and future trajectory of environmentalism in New Zealand It backs strategic

advice with both social and ecological data and raises questions over the country's reputation for greenness at the same time as recognizing its numerous achievements. With neat summaries of key issues at the end of each chapter, expansive guidance on further reading and a multitude of examples ideal for classroom debate, this volume gives us an informed, objective and wide-ranging appraisal on a topic of increasing centrality in the policy debate.

Key Topics in Conservation Biology David Macdonald, Katrina Service, 2009-03-12. This important new book addresses key topics in contemporary conservation biology. Written by an internationally renowned team of authors, *Key Topics in Conservation Biology* explores cutting-edge issues in modern biodiversity conservation, including controversial subjects such as rarity and prioritization, conflict between people and wildlife, the human aspect of conservation, the relevance of animal welfare and the role of nongovernment organizations. *Key Topics* also tackles the management of wildlife diseases and examines the impact of bushmeat extraction and the role of hunting in the conservationist's toolbox. Other essays explore basic tools of conservation biology such as computer modeling, conservation genetics, metapopulation processes and the ingenious use of hi-tech equipment. Each topic is explored by three top international experts assembled to bring their cross-cutting knowledge to a penetrating synthesis of the issues from both theoretical and practical perspectives. The interdisciplinary nature of biodiversity conservation is reflected throughout the book. Each essay examines the fundamental principles of the topic, the methodologies involved and, crucially, the human dimension. In this way, *Key Topics in Conservation Biology* embraces the issues from cutting-edge ecological science to policy, environmental economics, governance, ethics and the practical issues of implementation. *Key Topics in Conservation Biology* will be a valuable resource in universities and colleges, government departments and conservation agencies. It is aimed particularly at senior undergraduate and graduate students in conservation biology and wildlife management and those taking Masters degrees in any field relevant to conservation. Conservation practitioners, policy makers and the wider general public eager to understand more about important environmental issues will also find this book invaluable.

Conserving Bird Biodiversity Ken Norris, Deborah J. Pain, 2002-06-06. The earth's biodiversity currently faces an extinction crisis that is unprecedented. Conservationists attempt to intervene in the extinction process either locally by protecting or restoring important species and habitats or at national and international levels by influencing key policies and promoting debate. Reliable information is the foundation upon which these efforts are based, which places research at the heart of biodiversity conservation. The role of research in such conservation is diverse. It includes understanding why biodiversity is important, defining units of biodiversity, priority setting for species and sites, managing endangered and declining populations, understanding large-scale processes, making predictions about the future and interfacing with training, education, public awareness and policy initiatives. Using examples from a wide range of bird conservation work worldwide, researchers consider the principles underlying these issues and illustrate how these principles have been applied to address actual conservation problems for students, practitioners and researchers in conservation biology.

Holocene Extinctions Samuel

T. Turvey, 2009-05-28 The extent to which human activity has influenced species extinctions during the recent prehistoric past remains controversial due to other factors such as climatic fluctuations and a general lack of data. However, the Holocene, the geological interval spanning the last 11 500 years from the end of the last glaciation, has witnessed massive levels of extinctions that have continued into the modern historical era but in a context of only relatively minor climatic fluctuations. This makes a detailed consideration of these extinctions a useful system for investigating the impacts of human activity over time. *Holocene Extinctions* describes and analyses the range of global extinction events which have occurred during this key time period as well as their relationship to both earlier and ongoing species losses. By integrating information from fields as diverse as zoology, ecology, palaeontology, archaeology and geography and by incorporating data from a broad range of taxonomic groups and ecosystems, this novel text provides a fascinating insight into human impacts on global extinction rates both past and present. This truly interdisciplinary book is suitable for both graduate students and researchers in these varied fields. It will also be of value and use to policy makers and conservation professionals since it provides valuable guidance on how to apply lessons from the past to prevent future biodiversity loss and inform modern conservation planning.

The Kihansi Spray Toad (*Nectophrynoides asperginis*): Crisis Biology in the 21st Century William D. Newmark, 2025-05-15 The captive breeding and reintroduction of highly threatened species are among the most challenging conservation interventions and often represent the final tool in a comparatively small toolbox to conserve rapidly declining species. This book details the species recovery program that was designed and implemented over two decades to conserve the Kihansi Spray Toad *Nectophrynoides asperginis*, an extinct in the wild tropical amphibian. More than 20 international and national institutions were involved in the design and implementation of the species recovery program. This complex two-decade effort highlights the challenges of conserving highly threatened tropical amphibians and integrating conservation with development in the 21st century. This volume will appeal to biologists, conservation and development practitioners and institutions and individuals concerned about the conservation of biodiversity. *New Zealand Journal of Ecology*, 2007

Animal Behavior After Translocation into Novel Environments Oded Berger-Tal, David Saltz, Katherine Moseby, Philip J. Seddon, 2022-05-09 *The Bird Name Book* Susan Myers, 2022-10-25 A marvelously illustrated A to Z compendium of bird names from around the globe. *The Bird Name Book* is an alphabetical reference book on the origins and meanings of common group bird names from accentor to zeledonia. A cornucopia of engaging facts and anecdotes, this superbly researched compendium presents a wealth of incisive entries alongside stunning photos by the author and beautiful historic prints and watercolors. Myers provides brief biographies of prominent figures in ornithology such as John Gould, John Latham, Alfred Newton and Robert Ridgway and goes on to describe the etymological history of every common group bird name found in standardized English. She interweaves the stories behind the names with quotes from publications dating back to the 1400s, illuminating the shared evolution of language and our relationships with birds and rooting the names in the

Stoat in the Dock Carolyn M. King, 2025-05-07 This book surveys the ecology of stoats resident in New Zealand since the 1880s when they were deliberately imported from UK as potential agents of biological control against rabbits Our current understanding of them and of their impacts on the communities of native animals and birds with which they now live has developed over decades of research Past knowledge is essential to inform future decisions on when where and how to minimize damage from stoats in the future New Zealand is one of the most significant known examples of the drastic impacts of invasive predators on endemic species and communities but its story is largely unfamiliar to international audiences This is a detailed academically rigorous and fully documented account of how introduced mustelids have made themselves at home in New Zealand written by a specialist stoat biologist as a single coherent story Each chapter includes a section explaining the context in which the most important details of the biology of stoats and to a lesser extent ferrets have been documented what techniques worked and what did not and why The book is written primarily for the well informed general public plus a cross disciplinary audience of academics senior undergraduates and postgraduates interested in the history of interactions

between predators and native wildlife and professionals working on invasive species in New Zealand and elsewhere It will be of special interest to conservationists birdwatchers and naturalists
