Hypnosis Healing and the Christian John Court,2002-06-04 Hypnosis is a controversial practice with many myths about its power and dangers Hypnosis Healing and the Christian cuts through the confusion to present a balanced defense of the use of hypnosis by Christians arguing that it is a powerful tool in bringing about psychological change John Court avoids minimizing the dangers of this powerful phenomenon as he discusses examples of clinical hypnosis by Christians who have found emotional and spiritual benefits from its use Setting ethical concerns about the use of hypnosis firmly within a framework of the biblical material he argues that hypnosis is a morally neutral technique which may be used for good or ill Its use by pagan and other religions should not prevent its constructive and godly use by Christians This stimulating book will be of interest not only to those involved in counseling and healing ministries but also to Christians interested in broader understanding of how our human minds work

The Social Brain Sal Restivo,2023-01-09 The Social Brain Sociological Foundations introduces the concept of the social brain including a detailed conceptual model of the social brain networked in the world The idea that our brains are social has its roots in nineteenth century social thought and primate research initiated in the 1950s It was introduced into the neuroscience literature in 1990 as a challenge to the traditional view of the isolated bio medical brain a view that still dominates the scientific media and public imaginations Sal Restivo s foundational thesis is that humans arrive on the evolutionary stage always already and everywhere social We have social selves social brains and social genes He argues the I is a grammatical illusion reflecting the myth of individualism The unique feature of this book is the amount of space devoted to constructing the sociological scaffolding needed to understand what the author means by the social self the social mind and the social brain The approach leads to new ways of thinking about socialization consciousness and creativity as networked phenomena The result is a novel way of integrating the social self the biological self and the neurological self and erasing the classical boundaries between
