Niku-Lari, B. L. Mordike, 2013-10-22 The use of lasers for the working and treatment of materials is becoming increasingly common in industry However certain laser applications for example in welding cutting and drilling are more widely exploited than others Whilst the potential of lasers for the surface treatment of metals is well recognised in

practice this particular application is a relative newcomer The 24 papers in this volume present the latest research and engineering developments in the use of lasers for processes such as surface melting surface alloying and cladding and machining as well as discussing the properties of laser treated materials **High Power Lasers In Production Engineering** Dieter Schuocker, 1999-03-03 High power lasers of either the gas or solid state type can be used to generate a focal spot with a diameter of about a tenth of a millimetre and a power density of up to 100 Mio W cm2 With these intensities all materials can be heated up rapidly leading to fast melting violent evaporation or even plasma formation So laser beams can be utilized for various processing tasks such as transformation hardening cutting and ablation or welding and cladding or even rapid prototyping With these processes important advantages are achieved compared to conventional tools such as high processing speed due to the high concentration of energy and high quality of the processed workpiece without deformations due to the small overall heat input to the workpiece that corresponds to the small spot diameter All these advantages finally result in strongly reduced production costs which is the main reason for a world wide substitution of conventional processes and other beam tools by laser technology This monograph offers a great insight into the operation principles of high power laser sources the phenomena of interaction of laser beams and materials and the mechanisms of the various production processes with lasers thus enabling production engineers and others to make optimum use of the benefits of laser technology and to understand the technical properties and the physical limitations of this most recent technology especially in comparison to conventional tools and other beam tools and providing a sufficient basis for the understanding and use of Rapidly Solidified Alloys Liebermann, 1993-05-20 This volume details the principles future developments in this area underlying rapid solidification processing material structure and properties and their applications.
