Behaviour in our Bones Cara S. Hirst, Rebecca J. Gilmour, Francisca Alves Cardoso, Kimberly A. Plomp, 2023-02-07 Exploring behaviour through bones has always been a fascinating topic to those that study human remains Human bodies record and store vast amounts of information about the way we move where we live and our experiences of health and socioeconomic circumstances We see it every day and experience it but when it comes to past populations understanding

behaviour is largely mediated by our ability to read it in bones Behaviour in Our Bones How Human Behaviour Influences Skeletal Morphology examines how human physical and cultural actions and interactions can be read through careful analyses of skeletal human remains This book synthesises the latest research on reconstructing behaviour in the past Each chapter is dedicated to a specific region of the human body guiding the reader from head to toe and highlighting how evidence found on the skull shoulder thorax spine pelvis and the upper and lower limbs has been used to infer patterns of activity and other behaviour Chapter authors expertly summarise and critically discuss a range of methodological theoretical and interpretive approaches used to read skeletal remains and interpret a wide variety of behaviours including tool use locomotion reproduction health pathology and beyond Serves as a comprehensive resource for readers who are new to human skeletal behaviour investigations Offers an overview on how behaviour may impact the entire skeleton from head to toe Discusses activities that can leave evidence on the human skeleton and how behaviour can become incorporated in bone Introduces methods that biological anthropologists use to quantify and interpret skeletal evidence for behaviour and its range of morphological variation Critically examines the current state of skeletal behaviour research and provides recommendations for future work in this field

Diet for a Large Planet Chris Otter, 2023-06-05 In this magisterial study Chris Otter traces Britain's transition to a diet rich in animal proteins and refined carbohydrates like wheat and sugar a diet that required more acreage than that of Britain itself and that if followed everywhere would soon deplete the planet's resources as the title announces this was truly a diet for a large planet From the late 1700s to the end of World War II Otter accounts for the structures practices and ideologies generated by Britain's nutrition transition He shows how Britain was the first nation to undergo the population explosion urbanization and industrialization we associate with modernity and how it managed the unprecedented problem of how to feed its growing population Its radical solution would be to outsource its food production leading away from a locally produced plant based diet to one reliant on global markets international trade networks and enormous agro food systems that would have planetary effects on famine war the world economy and the wider earth system Not only did this phase in Britain's history make the consumption of meat white bread sugar and butter a coveted diet linked to development luxury and power it also opened up a new phase in economic history one whose dramatic effects endure to this day whether in terms of health problems eating disorders or the seemingly endless world food crisis

Forensic Facial Reconstruction Caroline Wilkinson, 2004-05-13 Forensic facial reconstruction is the reproduction of an individual's face from skeletal remains Used when other forms of identification are very difficult or impossible it can give a name to the dead in forensic cases or in archaeological contexts provide a tangible impression of real individuals from our past This comprehensive work starts with a discussion of the importance of the face in society and the history of facial reconstruction going on to evaluate the accuracy of modern reconstruction methods The Manchester method of facial reconstruction and the relationships between the hard and soft tissues of the face are described in detail Uniquely it also

describes the methods and problems associated with reconstructing the faces of children Collating all published facial tissue data and describing tissue variations with reference to age sex stature and ethnic origin this book will be an important reference volume for all practitioners in the field

Purposeful Pain Susan Guise Sheridan,Lesley A. Gregoricka,2020-01-03 Pain is an evolutionary and adaptive mechanism to prevent harm to an individual Beyond this how it is defined expressed and borne is dictated culturally Thus the study of pain requires a holistic approach crossing cultures disciplines and time This volume explores how and why pain inducing behaviors are selected including their potential to demonstrate individuality navigate social hierarchies and express commitment to an ideal It also explores how power dynamics affect individual choice at times requiring self induced suffering Taking bioanthropological and bioarchaeological approaches this volume focuses on those who purposefully seek pain to show that while often viewed as exotic the pervasiveness of pain inducing practices is more normative than expected Theory and practice are employed to re conceptualize pain as a strategic path towards achieving broader individual and societal goals Past and present motivations for self inflicted pain its socio political repercussions and the physical manifestations of repetitive or long term pain inducing behaviors are examined Chapters span geographic and temporal boundaries and a wide variety of activities to illustrate how purposeful pain is used by individuals for personal expression and manipulated by political powers to maintain the status quo This volume reveals how bioarchaeology illuminates paleopathology how social theory enhances bioarchaeology and how ethnography benefits from a longer temporal perspective

Bioarchaeology Clark Spencer Larsen,1997-11-27 Human remains recovered from archaeological sites can help us interpret lifetime events such as disease physiological stress injury and violent death physical activity tooth use diet and demographic history of once living populations This is the first comprehensive synthesis of the emerging field of bioarchaeology A central theme is the interaction between biology and behaviour underscoring the dynamic nature of skeletal and dental tissues and the influences of environment and culture on human biological variation It emphasises research results and their interpretation covering palaeopathology physiological stress skeletal and dental growth and structure the processes of aging and biodistance It will be a unique resource for students and researchers interested in biological and physical anthropology or archaeology
