Machine Vision Theory Algorithms Practicalities covers the limitations constraints and tradeoffs of vision algorithms This book is organized into four parts encompassing 21 chapters that tackle general topics such as noise suppression edge detection principles of illumination feature recognition Bayes theory and Hough transforms Part 1 provides research ideas on imaging and image filtering operations thresholding techniques edge detection and binary shape and boundary pattern analyses Part 2 deals with the area of intermediate level vision the nature of the Hough transform shape detection and corner location Part 3 demonstrates some of the practical applications of the basic work previously covered in the book This part also discusses some of the principles underlying implementation including on lighting and hardware systems Part 4 highlights the limitations and constraints of vision algorithms and their corresponding solutions This book will prove useful to students with undergraduate course on vision for electronic engineering or computer science *Artificial Intelligence & Expert Systems Sourcebook* V. Daniel Hunt, 2012-12-06

Artificial Intelligence and expert systems research development and demonstration have rapidly expanded over the past several years as a result new terminology is appearing at a phenomenal rate This sourcebook provides an introduction to artificial intelligence and expert systems it provides brief definitions it includes brief descriptions of software products and vendors and notes leaders in the field Extensive support material is provided by delineating points of contact for receiving additional information acronyms a detailed bibliography

and other reference data The terminology includes artificial intelligence and expert system elements for Artificial Intelligence Expert Systems Natural language Processing Smart Robots Machine Vision Speech Synthesis The Artificial Intelligence and Expert System Sourcebook is compiled from information acquired from numerous books journals and authorities in the field of artificial intelligence and expert systems I hope this compilation of information will help clarify the terminology for artificial intelligence and expert systems activities Your comments revisions or questions are welcome V Daniel Hunt Springfield Virginia May 1986 ix Acknowledgments The information in Artificial Intelligence and Expert Systems Sourcebook has been compiled from a wide variety of authorities who are specialists in their respective fields The following publications were used as the basic technical resources for this book Portions of these publications may have been used in the book Those definitions or artwork used have been reproduced with the permission to reprint of the respective publisher

Computer Vision: Theory and Industrial Applications Carme Torras, 2012-12-06 This book is the fruit of a very long and elaborate process It was conceived as a comprehensive solution to several deficiencies encountered while trying to teach the essentials of Computer Vision in different contexts to technicians from industry looking for technological solutions to some of their problems to students in search of a good subject for a PhD thesis and to researchers in other fields who believe that Computer Vision techniques may help them to analyse their results The book was carefully planned with all these people in mind Thus it covers the fundamentals of both 2D and 3D Computer Vision and their most widespread industrial applications such as automated inspection robot guidance and workpiece acquisition The level of explanation is that of an expanded introductory text in the sense that besides the basic material some special advanced topics are included in each chapter together with an extensive bibliography for experts to follow up Well known researchers on each of the topics were appointed to write a chapter following several guidelines to ensure a consistent presentation throughout I would like to thank the authors for their patience because some of them had to go through several revisions of their chapters in order to avoid repetition and to improve the homogeneity and coherence of the book I hope they will find that the final result has been worth their efforts

Technology Assessment in Software Applications Harold F. O'Neil, Jr., Eva Baker, Harold F. O'Neil, 2013-11-05 This volume offers an expansion of ideas presented at a recent conference convened to identify the major strategies and more promising practices for assessing technology The authors representing government business and university sectors helped to set the boundaries of present technology assessment by offering perspectives from computer science cognitive and military psychology and education Their work explores both the use of techniques to assess technology and the use of technology to facilitate the assessment process The book's main purpose is to portray the state of the art in technology assessment and to provide conceptual options to help readers understand the power of technology Technological innovation will continue to develop its own standards of practice and effectiveness To the extent that these practices are empirically based designers supporters and consumers will be given better information for their decisions

Speech

Technology at Work Jack Hollingum, Graham Cassford, 2013-03-09 Speech technology the use of speech as a means of sending information to and receiving information from computer systems has been in use as a research tool for many years Only recently has it begun to move out of the laboratory and into commercially worthwhile applications first with compressed and synthesised spoken messages then with computer recognition of spoken messages and today with diverse applications involving both recognition and reproduction of human speech We have written this book because we believe the technology has now advanced to the point where many more applications of voice recognition and response are both feasible and economically attractive Computers that can understand everyday speech are still a distant prospect but provided the limitations of present day equipment are clearly understood there is much that can be achieved with it Our aim is to show in non technical language what is now possible with the help of speech technology The text includes many examples of current applications in industry commerce and other fields and we have selected five current industrial applications combining speech recognition and response for more detailed attention Industrial cases have been chosen both because we see industry as an important growth area for speech applications in the next few years and because it presents some of the greatest difficulties in speech recognition if you can make it work in industry then you can make it work almost anywhere
