Enzymatic Polymerization towards Green Polymer Chemistry Shiro Kobayashi, Hiroshi Uyama, Jun-ichi Kadokawa, 2019-04-04 This book comprehensively covers researches on enzymatic polymerization and related enzymatic approaches to produce well defined polymers which is valuable and promising for conducting green polymer chemistry It consists of twelve chapters including the following topics The three classes of enzymes oxidoreductases transferases and hydrolases have been employed as catalysts for enzymatic polymerization and modification Well defined polysaccharides are produced by enzymatic polymerization catalyzed by hydrolases and transferases Hydrolase catalyzed polycondensation and ring opening polymerization are disclosed to produce a variety of polyesters Polyesters are synthesized by in vivo acyltransferase catalysis produced by microorganisms Enzymatic polymerization catalyzed by appropriate enzymes also produces polypeptides and other polymers Poly aromatic s are obtained by enzymatic polymerization catalyzed by oxidoreductases and their model complexes Such enzymes also induce oxidative polymerization of vinyl monomers Enzymatic modification of polymers is achieved to produce functionalized polymeric materials The enzymatic polymerization is a green process with non toxic catalysts high catalyst efficiency green solvents and renewable starting materials and minimal by products Moreover renewable resources like biomass are potentially employed as a starting substrate producing useful polymeric materials This book is not only educative to young polymer chemists like graduate students but also suggestive to industrial researchers showing the importance of the future direction of polymer synthesis for maintaining a sustainable society

Interacting Macromolecules John Cann, 2012-12-02 Interacting Macromolecules The Theory and Practice of Their Electrophoresis Ultracentrifugation and Chromatography reviews advances in theory and practice concerning the electrophoresis ultracentrifugation and chromatography of interacting macromolecules The principles of mass transport of non interacting systems are discussed along with the weak electrolyte moving boundary theory and analytical solution of approximate transport equations for certain types of interactions Computer computations on ligand mediated association dissociation reactions are also presented This book is comprised of six chapters and begins with a survey of the principles of electrophoresis and ultracentrifugation of non reacting systems before proceeding with a detailed treatment of the mass transport of reversibly reacting macromolecules A conservation equation is derived for a solution containing a single macromolecular ion The following chapters explore the weak electrolyte moving boundary theory the analytical Solution of approximate conservation equations and numerical solution of exact conservation equations The formulation of the numerical computation for ligand mediated association

dissociation reactions is described together with a code for sedimentation calculations The final chapter summarizes the procedures and precautions required to assure accurate interpretation of sedimentation and electrophoretic patterns in terms of the thermodynamic and molecular parameters characterizing the reactions exhibited by biological macromolecules The more common analytical applications of ultracentrifugation electrophoresis and chromatography are also outlined This monograph is intended for molecular biologists and graduate students

Degradable Polymers G. Scott, 2013-03-14 The emphasis in degradable polymers has changed since the first edition of this book Biomedical and agricultural applications remain important topics of scientific and commercial interest in the second edition However an increased emphasis on composting as a means of recovering value from wastes has led to a new impetus to understand how plastics degrade in the environment and the implication of this for international standards Polymers based on renewable resources are also a major topic in this edition but the debate continues about their long term sustainability and ecological advantages over degradable man made polymers Degradable Polymers will be of interest not only to academic and industrial scientists working on packaging agricultural and medical applications of plastics but also to students of environmental science and legislators concerned with the effects of man made materials in the environment

Handbook of Hydrocolloids Glyn O. Phillips, Peter A. Williams, 2009-05-28 Hydrocolloids are among the most widely used ingredients in the food industry They function as thickening and gelling agents texturizers stabilisers and emulsifiers and in addition have application in areas such as edible coatings and flavour release Products reformulated for fat reduction are particularly dependent on hydrocolloids for satisfactory sensory quality They now also find increasing applications in the health area as dietary fibre of low calorific value The first edition of Handbook of Hydrocolloids provided professionals in the food industry with relevant practical information about the range of hydrocolloid ingredients readily and at the same time authoritatively It was exceptionally well received and has subsequently been used as the substantive reference on these food ingredients Extensively revised and expanded and containing eight new chapters this major new edition strengthens that reputation Edited by two leading international authorities in the field the second edition reviews over twenty five hydrocolloids covering structure and properties processing functionality applications and regulatory status Since there is now greater emphasis on the protein hydrocolloids new chapters on vegetable proteins and egg protein have been added Coverage of microbial polysaccharides has also been increased and the developing role of the exudate gums recognised with a new chapter on Gum Ghatti Protein polysaccharide complexes are finding increased application in food products and a new chapter on this topic as been added Two additional chapters reviewing the role of hydrocolloids in emulsification and their role as dietary fibre and subsequent health benefits are also included The second edition of Handbook of hydrocolloids is an essential reference for post graduate students research scientists and food manufacturers Extensively revised and expanded second edition edited by two leading international authorities Provides an introduction to food hydrocolloids considering regulatory aspects and thickening

characteristics Comprehensively examines the manufacture structure function and applications of over twenty five hydrocolloids
