mining for software knowledge and emerging topics in software engineering and knowledge engineering *Computers as Components* Wayne Hendrix Wolf, 2005 This work unravels the complexity of embedded systems e.g. cell phones, microwaves and information appliances and of the process tools and techniques necessary for designing them *Scientific and Technical Aerospace Reports*, 1994 **The Software Factory Challenge** Herbert Weber, 1997 The Eureka Software Factory project ESF was set up by a Group of European partners in 1987. Its objective was broadly to improve the large scale software production process by introducing an industrialised approach to have The Software Factory Challenge social, organisational and technical aspects. The project was set up under the pan-European Eureka programme and it was funded by the partners together with their national governments. This book is not a history of the ESF project but rather a presentation of its main ideas and achievements and an account of how the concepts pioneered by the project have become part of a general movement in both the industrial and academic domains. In this movement the facility for the production, use and maintenance of large scale computer artefacts, the Software Factory, is treated in a wide and organic way so as to include concepts such as business value and process improvement with the development of new technologies being driven by these new wide requirements. This new approach is in contrast with a narrowly technological one in which individual tasks like programming are aided by machines but in which the production process as a whole is not supported. The main body of the book is divided into four Parts. Part I gives a short overview of the ESF project and its ideas and goes on to attempt to place the ESF work in the context of industry as a whole with reference to both producers and users of Information Technology systems. Part II sets out to explain the technological basis of the Software Factory as seen by ESF and goes on to describe some experimental and pioneering implementations of Factory Support Environments and their constituents. Part III is devoted to the most complete implementation of an ESF Factory Support Environment to date, Kernel 2r. This Section provides a highly detailed discussion of both design and implementation issues. In Part IV addresses what deployment strategies are now available to continue the spread of these ideas in order to meet the goal of better software based systems, i.e. systems which are safer, more economical to build, more easily changed and more useful than those that have been built up to now. Finally, a Glossary of Terms and a list of References is given. Readers, those who have a professional interest in Information Technology *Product Focused Software Process Improvement* Markku Oivo, Seija Komi-Sirviö, 2003-07-01 On behalf of the PROFES organizing committee we would like to welcome you to the 4th International Conference on Product Focused Software Process Improvement PROFES 2002 in Rovaniemi, Finland. The conference was held on the Arctic Circle in exotic Lapland under the Northern Lights just before Christmas time when Kaamos, the polar night, is known in Finnish as Kaamos shows its best characteristics. PROFES has established itself as one of the recognized international process improvement conferences. Despite the current economic downturn, PROFES has attracted a record number of submissions. A total of 70 full papers were submitted and the program committee had a difficult task in selecting the best papers to be

presented at the conference The main theme of PROFES is professional software process improvement SPI motivated by product and service quality needs SPI is facilitated by software process assessment software measurement process modeling and technology transfer It has become a practical tool for quality software engineering and management The conference addresses both the solutions found in practice and the relevant research results from academia
