Predictions Proceedings Richard Frank Donnelly,1979 Using Solar Radio Burst Integrated Fluxes to Predict Energetic
Proton Flux Increases William R. Barron,1982 Time integrated solar radio fluxes and their association with satellite observed
solar energetic proton flux increases have been studied The time integration was only of the U portion of the radio burst flux
increase The best correlations between the integrated radio fluxes and the proton peak fluxes were realized when the radio
fluxes were multiplied by the factor $\exp 3B$ where B is the angular distance in radians between the site of the flare and the
solar footpoint of the magnetic field connection between the sun and the earth The solar footpoint positions were determined
from the solar wind speed Two variate linear regressions were computed using the time integrated radio fluxes at five
discrete radio frequencies in the 606 to 8800 MHz frequency interval and peak proton fluxes at 10 MeV and 30 MeV The
higher frequencies of 2695 4995 and 8800 MHz all correlated better with the 10 MeV protons than the lower frequencies The
30 MeV protons were even better correlated with the higher frequencies but correlation with the lower frequencies were
poorer The Total Energy Density $E_{\text{sub T}}$ of the radio burst an integration across the frequency interval of the time integrated
radio fluxes at each frequency was found to be better correlated with the proton fluxes than any of the individual frequencies

C.S. Deehr,J.A. Holtet,2012-12-06 This book is an ordered collection of tutorial lectures on the physical processes in the polar
upper atmosphere given at the NATO Advanced Study Institute ASI on The Exploration of the Polar Upper Atmosphere held

at Lillehammer Norway May 5 16 1980 The polar cap is an important part of the high latitude atmosphere not only because of circulation and horizontal transport in the neutral atmosphere and convection in the ionosphere but also because of its unique energy sources and sinks In addition solar wind plasma is led into the upper atmosphere by the geomagnetic field at the poles and the polar cap is as stated by Tutorial Leader Roederer in this volume the place where outer space meets earth The atmosphere at lower latitudes is well known to the ground based observer and the advent of satellite observations was simply the beginning of a new perspective The exploration of the atmosphere at polar latitudes however proceeded in quite the opposite manner and satellite maps of the polar caps may be compared with a relatively meagre set of ground based data Recent efforts to extend the polar observations from the ground have resulted in the need for a review of the physical principles and processes occurring in the polar upper atmosphere The interdisciplinary nature of these efforts led to the emphasis here on a tutorial program Scientific and Technical Aerospace Reports ,1994 **Storms in Space** John W.
