Surveys In Applied Mathematics:

   Surveys in applied mathematics Nicholas Constantine Metropolis,Gian-Carlo Rota,1976   **Surveys in Applied Mathematics** Joseph B. Keller,David W. McLaughlin,George C. Papanicolaou,2013-12-21 Partial differential equations play a central role in many branches of science and engineering Therefore it is important to solve problems involving them One aspect of solving a partial differential equation problem is to show that it is well posed i e that it has one and only one solution and that the solution depends continuously on the data of the problem Another aspect is to obtain detailed quantitative information about the solution The traditional method for doing this was to find a representation of the solution as a series or integral of known special functions and then to evaluate the series or integral by numerical or by asymptotic methods The shortcoming of this method is that there are relatively few problems for which such representations can be found Consequently the traditional method has been replaced by methods for direct solution of problems either numerically or asymptotically This article is devoted to a particular method called the ray method for the asymptotic solution of problems for linear partial differential equations governing wave propagation These equations involve a parameter such as the wavelength which is small compared to all other lengths in the problem The ray method is used to construct an asymptotic expansion of the solution which is valid near 0 or equivalently for k 21r I A near infinity   Surveys in Applied Mathematics Mark I. Freidlin,Sergey Gredeskul,John K. Hunter,Andrew Marchenko,Leonid Pastur,2012-12-06 Volume 2 offers three in depth articles covering significant areas in applied mathematics research Chapters feature numerous illustrations extensive background material and technical details and abundant examples The authors analyze nonlinear front propagation for a large class of semilinear partial differential equations using probabilistic methods examine wave localization phenomena in one dimensional random media and offer an extensive introduction to certain model equations for nonlinear wave phenomena
