Surveys of Some Recent Results in Operator Theory Bernard B. Morrel,1988 **Random Geometrically Graph Directed Self-Similar Multifractals** Lars Olsen,2017-07-12 Multifractal theory was introduced by theoretical physicists in 1986 Since then multifractals have increasingly been studied by mathematicians This new work presents the latest research on random results on random multifractals and the physical thermodynamical interpretation of these results As the amount of work in this area increases Lars Olsen presents a unifying approach to current multifractal theory Featuring high quality original research material this important new book fills a gap in the current literature available providing a rigorous mathematical treatment of multifractal measures Common Zeros of Polynominals in Several Variables and Higher Dimensional Quadrature Yuan Xu,2020-12-17 Presents a systematic study of the common zeros of polynomials in several variables which are related to higher dimensional quadrature The author uses a new approach which is based on the recent development of orthogonal polynomials in several variables and differs significantly from the previous ones based on algebraic ideal theory Featuring a great deal of new work new theorems and in many cases new proofs this self contained work will be of great interest to researchers in numerical analysis the theory of orthogonal polynomials and related subjects

Conjugate Gradient Type Methods for Ill-Posed Problems Martin Hanke,2017-11-22 The conjugate gradient method is a powerful tool for the iterative solution of self adjoint operator equations in Hilbert space This volume summarizes and extends the developments of the past decade concerning the applicability of the conjugate gradient method and some of its variants to ill posed problems and their regularization Such problems occur in applications from almost all natural and technical sciences including astronomical and geophysical imaging signal analysis computerized tomography inverse heat transfer problems and many more This Research Note presents a unifying analysis of an entire family of conjugate gradient type methods Most of the results are as yet unpublished or obscured in the Russian literature Beginning with the original results by Nemirovskii and others for minimal residual type methods equally sharp convergence results are then derived with a different technique for the classical Hestenes Stiefel algorithm In the final chapter some of these results are extended to selfadjoint indefinite operator equations The main tool for the analysis is the connection of conjugate gradient type methods to real orthogonal polynomials and elementary properties of these polynomials These prerequisites are provided in a first chapter Applications to image reconstruction and inverse heat transfer problems are pointed out and exemplarily numerical results are shown for these applications **Emerging Applications in Free Boundary Problems** J M Chadam,2020-12-22 This Research Note presents a collection of papers on emerging applications in free boundary problems The subjects covered include microgravity chemical and biological reactions and electromagnetism and electronics *Calculus of Variations, Applications and Computations* C Bandle,Michel Chipot,J Saint Jean Paulin,Josef Bemelmans,I Shafrir,1995-04-26 This research presents some important domains of partial differential equations and applied mathematics including calculus of

variations control theory modelling numerical analysis and various applications in physics mechanics and engineering These topics are now part of many areas of science and have experienced tremendous development during the last decades

Harmonic Maps Into Homogeneous Spaces Malcolm Black,2018-05-04 Harmonic maps and the related theory of minimal surfaces are variational problems of long standing in differential geometry Many important advances have been made in understanding harmonic maps of Riemann surfaces into symmetric spaces In particular twistor methods construct some and in certain cases all such mappings from holomorphic data These notes develop techniques applicable to more general homogeneous manifolds in particular a very general twistor result is proved When applied to flag manifolds this wider viewpoint allows many of the previously unrelated twistor results for symmetric spaces to be brought into a unified framework These methods also enable a classification of harmonic maps into full flag manifolds to be established and new examples are constructed The techniques used are mostly a blend of the theory of compact Lie groups and complex differential geometry This book should be of interest to mathematicians with experience in differential geometry and to theoretical physicists *Recent Advances in Differential Equations* H-H Dai,P.L. Sachdev,2020-01-30 The First Pan China Conference on Differential Equations was held in Kunming China in June of 1997 Researchers from around the world attended including representatives from the US Canada and the Netherlands but the majority of the speakers hailed from China and Hong Kong This volume contains the plenary lectures and invited talks presented at that conference and provides an excellent view of the research on differential equations being carried out in China Most of the subjects addressed arose from actual applications and cover ordinary and partial differential equations Topics include **Handbook of Analytic Operator Theory** Kehe Zhu,2019-05-10 This handbook concerns the subject of holomorphic function spaces and operators acting on them Topics include Bergman spaces Hardy spaces Besov Sobolev spaces Fock spaces and the space of Dirichlet series Operators discussed in the book include Toeplitz operators Hankel operators composition operators and Cowen Douglas class operators **Progress in Holomorphic Dynamics** Hartje Kriete,1998-05-20 In the last few decades complex dynamical systems have received widespread public attention and emerged as one of the most active fields of mathematical research Starting where other monographs in the subject end Progress in Holomorphic Dynamics advances the theoretical aspects and recent results in complex dynamical systems with particular emphasis on Siegel discs Organized into four parts the papers in this volume grew out of three workshops two hosted by the Georg August Universit t G ttingen and one at the Mathematisches Forschungsinstitut Oberwolfach Part I addresses linearization The authors review Yoccoz s proof that the Brjuno condition is the optimal condition for linearizability of indifferent fixed points and offer a treatment of Perez Marco s refinement of Yoccoz s work Part II discusses the conditions necessary for the boundary of a Siegel disc to contain a critical point builds upon Herman s work and offers a survey of the state of the art regarding the boundaries of Siegel discs Part III deals with the topology of Julia sets with Siegel discs and contains a remarkable highlight C L Petersen establishes the

existence of Siegel discs of quadratic polynomials with a locally connected boundary Keller taking a different approach explains the relations between locally connected real Julia sets with Siegel discs and the abstract concepts of kneading sequences and itineraries Part IV closes the volume with four papers that review the different directions of present research in iteration theory It includes discussions on the relations between commuting rational functions and their Julia sets interactions between the iteration of polynomials and the iteration theory of entire transcendental functions a deep analysis of the topology of the limbs of the Mandelbrot set and an overview of complex dynamics in higher dimensions   <u>Functional Analysis with Current Applications in Science, Technology and Industry</u> Martin Brokate,Abul Hasan Siddiqi,1997-12-08 This volume constitutes the proceedings of a conference on functional analysis and its applications which took place in India during December 1996 Topics include topological vector spaces Banach algebras meromorphic functions partial differential equations variational equations and inequalities optimization wavelets elastroplasticity numerical integration fractal image compression reservoir simulation forest management and industrial maths   **Operator Theory and Its Applications** Alexander G. Ramm,P. N. Shivakumar,Abraham Vilgelmovich Strauss,2000 Together with the papers on the abstract operator theory are many papers on the theory of differential operators boundary value problems inverse scattering and other inverse problems and on applications to biology chemistry wave propagation and many other areas BOOK JACKET   *Operator Theory in Different Settings and Related Applications* Roland Duduchava,Marinus A. Kaashoek,Nikolai Vasilevski,Victor Vinnikov,2018-03-28 This book provides a selection of reports and survey articles on the latest research in the area of single and multivariable operator theory and related fields The latter include singular integral equations ordinary and partial differential equations complex analysis numerical linear algebra and real algebraic geometry all of which were among the topics presented at the 26th International Workshop in Operator Theory and its Applications held in Tbilisi Georgia in the summer of 2015 Moreover the volume includes three special commemorative articles One of them is dedicated to the memory of Leiba Rodman another to Murray Marshall and a third to Boris Khvedelidze an outstanding Georgian mathematician and one of the founding fathers of the theory of singular integral equations The book will be of interest to a broad range of mathematicians from graduate students to researchers whose primary interests lie in operator theory complex analysis and applications as well as specialists in mathematical physics   <u>Extending Modules</u> Nguyen Viet Dung,2019-01-22 Module theory is an important tool for many different branches of mathematics as well as being an interesting subject in its own right Within module theory the concept of injective modules is particularly important Extending modules form a natural class of modules which is more general than the class of injective modules but retains many of its   *Integral Transforms, Reproducing Kernels and Their Applications* Saburou Saitoh,2020-11-26 The general theories contained in the text will give rise to new ideas and methods for the natural inversion formulas for general linear mappings in the framework of Hilbert spaces containing the natural solutions for Fredholm integral equations of the first kind

Singularities of Solutions of Second-Order Quasilinear Equations Laurent Veron,1996-08-01 This text examines the singularity problem for solutions of elliptic and parabolic quasilinear equations of second order **The Dirichlet Problem for the Laplacian in Bounded and Unbounded Domains** Christian G Simader,H Sohr,1996-11-07 The Dirichlet Problem u in G u G 0 for the Laplacian in a domain G Rn with boundary G is one of the basic problems in the theory of partial differential equations and it plays a fundamental role in mathematical physics and engineering *Elliptic Boundary Value Problems with Indefinite Weights, Variational Formulations of the Principal Eigenvalue, and Applications* Fethi Belgacem,1997-05-05 Elliptic Boundary Value Problems With Indefinite Weights presents a unified approach to the methodologies dealing with eigenvalue problems involving indefinite weights The principal eigenvalue for such problems is characterized for various boundary conditions Such characterizations are used in particular to formulate criteria for the persistence and extinctions of populations and applications of the formulations obtained can be quite extensive **Linear Theory of Colombeau Generalized Functions** M Nedeljkov,S Pilipovic,D Scarpalezos,1998-05-20 Results from the now classical distribution theory involving convolution and Fourier transformation are extended to cater for Colombeau s generalized functions Indications are given how these particular generalized functions can be used to investigate linear equations and pseudo differential operators Furthermore applications are also given to problems with nonregular data

Mathematical Methods in Scattering Theory and Biomedical Technology George Dassios,Dimitrios I Fotiadis,Christos V Massalas,Kiriakie Kiriaki,1998-06-11 The papers in this volume address the state of the art and future directions in applied mathematics in both scattering theory and biomedical technology A workshop held in Metsovo Greece during the summer of 1997 brought together some of the world s foremose experts in the field with researchers working in Greece Sixteen of the contributed papers appear in this volume All the papers give new directions and in several cases the most important scientific contributions in the fields
