Antibody Fc Margaret Ackerman, Falk Nimmerjahn, 2013-08-06 Antibody Fc is the first single text to synthesize the literature on the mechanisms underlying the dramatic variability of antibodies to influence the immune response The book demonstrates the importance of the Fc domain including protective mechanisms effector cell types genetic data and variability in Fc domain function This volume is a critical single source reference for researchers in vaccine discovery immunologists microbiologists oncologists and protein engineers as well as graduate students in immunology and vaccinology Antibodies represent the correlate of protection for numerous vaccines and are the most rapidly growing class of drugs with applications ranging from cancer and infectious disease to autoimmunity Researchers have long understood the variable domain of antibodies which are responsible for antigen recognition and can provide protection by blocking the function of their target antigen However recent developments in our understanding of the protection mediated by antibodies have highlighted the critical nature of the antibody constant or Fc domain in the biological activity of antibodies The Fc domain allows antibodies to link the adaptive and innate immune systems providing specificity to a wide range of innate effector cells In addition they provide a feedback loop to regulate the character of the immune response via interactions with B cells and antigen presenting cells Clarifies the different mechanisms of IgG activity at the level of the different model systems used including human genetic mouse and in vitro Covers the role of antibodies in cancer infectious disease and autoimmunity and in the setting of monoclonal antibody therapy as well as naturally raised antibodies Color illustrations enhance explanations of the immune system

Challenges Associated with Identifying Preclinical Animal Models for the Development of Immune-based Therapies Rajan P. Adhikari, Rajat Varma, Silke Paust, An Coosemans, 2024-07-24 There hasn't been a better time to be a drug developer for immune based therapies than the past couple of decades We have seen an explosion in immune based therapies for cancer autoimmune and infectious diseases metabolic diseases and diseases and disorders of the nervous system The modalities of these immune based therapies span small molecules biologics and gene and cell therapeutic approaches Significant advances have been made in optimizing drug design for its specificity for the target characterizing the mode of action in in vitro assays and ensuring safety and manufacturability However an area of challenge that remains is identifying animal models for evaluating efficacy and pharmacokinetics pharmacodynamics relationship that are predictive of drug effects in humans Discussion on this topic is warranted as examples of failures of translation from animal models to humans provide us an opportunity to learn more about human biology
