Suspended Animation Robert Mills,2006-02-01 *Suspended Animation* argues that not only is the stereotype of uncontrolled violence in the Middle Ages historically misleading the gulf between modern society and the medieval era is not as immense as we might think *The System of Antichrist* Charles Upton,2005 *The System of Antichrist* examines the present religious and cultural scene from the standpoint of traditional metaphysics and critiques the New Age spiritualities within their postmodern context Its many references to Rene Guenon and Frithjof Schuon also help introduce these important but little known traditionalist thinkers The book presents lore relating to the latter days of the present cycle from the vantage point of comparative religion drawing upon relevant doctrines from Buddhism Hinduism Judaism Christianity Islam Zoroastrianism and the Native American traditions It also speculates upon the social psychic and spiritual nature of that being known to Christianity Judaism and Islam as the Antichrist presenting him as both an individual and a system and warning those willing to be warned against the spiritual seduction and terror he represents and against the regime which will be and is the social expression of that seduction and that terror Finally in tracing the roots of Antichrist in the fallen nature of man the author sketches the particular quality of spirituality proper to apocalyptic times the dangers it faces the unique opportunities open to it And along the way he describes his own course from the spiritual revolution of the 1960s through the world of New Age spiritualities to the threshold of traditional esoterism and metaphysics As he says speaking of the angst that characterizes the modern world The specific medicine for the shock of despair is the deeper shock of meaning Nothing but the weight of eternity breaking through the thin brittle shell of the postmodern sky can set us on our feet **Intensive**

Care Medicine Jean-Louis Vincent,2006-03-30 *The Update* compiles the most recent widespread developments of experimental and clinical research and practice in one comprehensive reference book The chapters are written by well recognized experts in the field of intensive care and emergency medicine It is addressed to everyone involved in internal medicine anesthesia surgery pediatrics intensive care and emergency medicine *Indexing* Martha Thorne Wheeler,1905

The Coolest Cat in Town William Gleason,1977 **Anoxia** Pamela Padilla,2012-01-05 This book reviews how severe oxygen deprivation affects biological systems from the molecular to the ecological level The contributing authors come from diverse regions of the world which proves the interest in the academic analysis of oxygen deprivation The diversity in the experimental approach scientists take in order to understand the influence oxygen deprivation has on living systems is apparent throughout this book One of the presented ideas deals with the exploration and examination of the physiological cellular and genetic characteristics of killifish embryos and nematodes exposed to anoxia Furthermore the book includes material on the mechanisms regulating hypoxia and anoxia tolerance and their implications of on human health issues Finally new methodologies to examine oxygen deprivation and the impact of human related activities on oxygen level within important ecological systems such as Lake Victoria are presented There is no doubt that the oxygen molecule is central to

every stratum of biological systems **Library Journal** ,1892 *Library Journal* Melvil Dewey,Richard Rogers Bowker,L. Pylodet,Charles Ammi Cutter,Bertine Emma Weston,Karl Brown,Helen E. Tamura,2012-02-02 The International Brain Hypothermia Symposium 2004 held in Tokyo was a forum for many of the world s leading researchers and clinicians to present and discuss developments on the cutting edge of this most promising of neurological therapies With a view to sharing this knowledge and encouraging the spread of new techniques the editors have compiled these proceedings covering the latest technology and methods Topics include brain thermo pooling hemoglobin dysfunction associated neuronal hypoxia intensive care management of brain hypothermia for severely brain injured patients new findings not yet recorded in animal models and control of hypothermia associated immune crises Also included are advanced clinical results from trauma stroke and cardiac arrest patients The result is a volume that will be a valuable resource for professionals in the fields of emergency treatment critical medicine and neurosurgery Armoured Warfare in the British Army 1939-1945 Dick Taylor,2022-10-21 The second volume in Dick Taylor s three volume illustrated history of the evolution of armored maneuver warfare in the British army covers the period of the Second World War in which the tank came of age and developed into the principal land weapon of decision He describes how during the first half of the war the British army came close to disaster from the armored warfare perspective and how the bitter lessons of failure were learned in time to deliver success in 1944 and 1945 As well as providing a fascinating overview of the tactical use of armor during the main campaigns he considers such much neglected aspects as the role of training and organization officer selection and recruitment and the mechanization of other arms His wide ranging book also features extensive well laid out tables giving key information about British armor during this period This expert account quotes heavily from the vivid recollections of soldiers who served in armor and is not afraid to criticize as well as praise *Experimental Life* Robert Mitchell,2013-12-16 *Experimental Life* establishes the multiple ways in which Romantic authors appropriated the notion of experimentation from the natural sciences Winner of the Michelle Kendrick Memorial Book Prize of the Society for Literature Science and the Arts BSLS Book Prize of the British Society for Literature and Science If the objective of the Romantic movement was nothing less than to redefine the meaning of life itself what role did experiments play in this movement While earlier scholarship has established both the importance of science generally and vitalism specifically with regard to Romanticism no study has investigated what it meant for artists to experiment and how those experiments related to their interest in the concept of life *Experimental Life* draws on approaches and ideas from contemporary science studies proposing the concept of experimental vitalism to show both how Romantic authors appropriated the concept of experimentation from the sciences and the impact of their appropriation on post Romantic

concepts of literature and art Robert Mitchell navigates complex conceptual arenas such as network theory gift exchange paranoia and biomedica and introduces new concepts such as cryptogamia chylopoietic discourse trance plantation and the poetics of suspension As a result Experimental Life is a wide ranging summation and extension of the current state of literary studies the history of science cultural critique and theory End of the Universe M J Dees,2023-06-25 When their friends are kidnapped Sevan and Nadio find themselves marooned on the tourist Planet of Pallene Their predicament gets worse when Republic troops transport them to a prison planet from which no one has ever escaped But escape is exactly what Sevan must do if he is to save the life of his friend Nadio End of the Universe is the third novel in the light hearted space opera series Mastery of the Stars The Redeemed RV Minkler,2022-03-15 One child could change the future of humanity Eleven years after a virus swept through the world small spread out gangs are all that s left of humanity Veena Osborne and her mentor Abraham Jones lead the Tierrans through the daily trials of surviving in post apocalyptic San Diego Together they cling to the daily disciplines of faith and life that keep them safe and alive When Nate Sinclair stumbles out of a NASA sponsored suspended animation experiment and into a world changed by catastrophic fires and pandemics he finds his way to the Tierrans and to Veena The miraculous preservation of Nate through all the trials of the world might be enough to keep a sterile humanity alive but the spreading knowledge of his immunity threatens to push the surviving humans into all out war This apocalyptic novel is sure to entice fans of P D James The Children of Men Lauren James The Quiet at the End of the World and Clare Morrall When the Floods Came with it s vibrant characters and intense storylines **Trauma Red** Peter Rhee,2014-06-03 The incredible life story of the trauma surgeon who helped save Congresswoman Gabby Giffords from his upbringing in South Korea and Africa to the gripping dramas he faces in a typical day as a medical genius Congresswoman Gabby Giffords is a household name most people remember that awful day in Arizona in 2011 when she was a victim of an act of violence that left six dead and thirteen wounded What many people don t know is that it was Dr Peter Rhee who played a vital role in her survival Born in South Korea Rhee moved with his family to Uganda where he watched his public health surgeon father remove a spear from a man s belly and began his lifelong interest in medicine What came next is this compelling portrait of how one becomes a world class trauma surgeon the specialized training the mindset to make critical decisions and the practiced ability to operate on the human body Dr Rhee is so eminent that when President Clinton traveled to China he was selected to accompany the president as his personal physician In Trauma Red we learn how Rhee s experiences were born from the love and sacrifices of determined parents and of Rhee s own quest to become as excellent a surgeon as possible Trauma Red chronicles the patient cases Dr Rhee has handled over two decades on two distinct battle fronts In Iraq and Afghanistan where he served as a frontline US Navy surgeon trying to save young American soldiers and the urban zones of Los Angeles and Washington DC where he has been confronted by an endless stream of bloody victims of civilian violence and accidents Tough and outspoken Dr Rhee isn t afraid to take on the politics of violence in America and a

A Traveler's Guide to the Stars Les Johnson,2024-06-04 The discovery in the last few decades of thousands of exoplanets orbiting nearby stars has made the age old dream of interstellar travel a newly urgent scientific question Initiatives like NASA s 100 Year Starship and the billionaire funded Breakthrough Starshot are now investigating and developing new technologies that could one day enable humans to explore perhaps even colonize distant solar systems This short accessible book brings readers to the forefront of this new frontier laying out both the challenges to be navigated and the latest thinking and scientific developments that could allow us to overcome them NASA scientist Les Johnson begins by surveying the vast hostile landscape between stars we ll need to traverse an extremely cold mysterious expanse rife with harsh radiation and cosmic dust He describes our first sallies into this sphere with forerunners like the Voyager craft now well on their way into the interstellar medium and new extrasolar probes currently being planned that will venture farther beyond our solar system and launch within our lifetimes He next considers who our interstellar explorers will be first robots followed by humans and what each will entail before delving into the mind boggling science of how one would actually propel an interstellar starship Johnson explains the most promising approaches from antimatter powered rockets to the light filled sails scientists like himself are piloting now and discusses other design challenges to be overcome like power and communications The book closes with a chapter exploring the real science of sci fi and pop culture fixtures like warp drives and wormholes and a conclusion that considers what it will take as a society to realize our interstellar future Neuronal

Inputs and Outputs of Aging and Longevity Joy Alcedo,Thomas Platt,Elena G. Pasyukova,2013-08-23 An animal s survival strongly depends on its ability to maintain homeostasis in response to the changing quality of its external and internal environments This is achieved through intercellular communication not only within a single tissue but also among different tissues and organ systems Thus alterations in tissue to tissue or organ to organ communications which are under genetic regulation can affect organismal homeostasis and consequently impact the aging process One of the organ systems that play a major role in maintaining homeostasis is the nervous system Considering that the nervous system includes the sensory system which perceives the complexity of an animal s environment it should be no surprise that there would be a sensory influence on homeostasis and aging To promote homeostasis any given sensory information is transmitted through short range signals via neural circuits and or through long range endocrine signals to target tissues which may in turn be neuronal

or non neuronal in nature At the same time since homeostasis involves a number of feedback mechanisms non neuronal tissues can also modulate sensory and other neuronal functions Several genes that regulate signaling pathways known to affect homeostasis and aging have been shown to act in neurons in tissues that are likely downstream targets of the nervous system or through feedback regulation of neuronal activities These genes can have different temporal requirements some might function early e g by affecting neural development while others may only be required later in adulthood Some well known examples of genes involved in the neuronal regulation of homeostasis and longevity encode components of the evolutionarily conserved nutrient sensing insulin like signaling pathway the stress sensing internal repair system and the mitochondrial electron transport chain Indeed the genetic perturbation of these pathways has been found to lead to numerous diseases many of which are age related and involve the nervous system such as neurodegeneration and the metabolic syndrome Despite much progress however many aspects of the neuronal inputs and outputs that affect aging and longevity are poorly understood to date For example the precise neuronal and non neuronal circuitries and the details of the molecular mechanisms through which genes signaling pathways maintain homeostasis and affect aging in response to the environment remain to be elucidated Similarly it is presently unclear whether genes that regulate the early development of the nervous system and its consequent circuitry influence homeostasis and longevity during adulthood At the same time although many genes affecting aging are conserved both the nervous system and the aging process are highly variable within populations and among taxa Accordingly the role of natural genetic variation in shaping the neurobiology of aging is also presently unknown The aim of this Research Topic is therefore to highlight the genetic developmental and physiological aspects of the signaling networks that mediate the neuronal inputs and outputs that are required to maintain organismal homeostasis The elucidation of the effects of these neuronal activities on homeostasis may thus provide much needed insight into mechanisms that affect aging and longevity
