Wetlands Alan Dixon,2018-02-06 This title was first published in 2003 There has been increasing recognition around the world that wetlands are fragile ecosystems which require sensitive and sustainable management if they are to continue to provide their range of functions and benefits These functions and benefits which include contributions to food security and environmental regulation play a critical role in sustaining rural livelihoods in many developing countries Drawing upon research carried out in the area this book identifies and discusses the importance of wetlands to local communities in south west Ethiopia and in particular how indigenous wetland management practices contribute to sustainable wetland use As the basis of wetland management particular attention is paid to the role of Indigenous Knowledge Systems and how knowledge of wetland functioning is acquired disseminated developed and applied by local communities in their wetland management strategies Critically this community knowledge is examined in the context of scientific data specifically that obtained from a wetland hydrology monitoring programme thereby drawing attention to the strengths and weaknesses of both systems This has major implications not only for the ways in which wetlands and other natural resources are managed at the local level but also for the wider rural development strategies of governments and non governmental organizations *Environment and Development: An Economic Approach*

Jan Bojö,Karl-Göran Mäler,Lena Unemo,2013-03-09 This book is the second edition of a text based on a report commissioned by the Swedish International Development Authority SID A The financial grant from SIDA which made the work possible is hereby gratefully acknowledged There are already many books on the market about environmental economics some of them very good What is special about this one We do not claim to have obtained new results but we have our own way of presenting the subject matter In particular we are of the opinion that policy failures are often overlooked as an obstacle to efficient environmental management Although the main emphasis in this book is on project level analysis it is essential that such analyses be linked to an understanding of the disincentives for environmental

improvements that general economic and particular environmental policies provide Another essential feature of the book although this is not unique is the links provided between theory and empirical illustrations We hope that this will illustrate to our readers the practical usefulness but also the difficulties of applying economics to environmental problems In particular we hope that the text can be of interest to decision makers development programme personnel teachers and the general public interested in how economics can contribute to better environmental decision making In principle this book can be read by anyone interested in the subject matter without any formal education in economics However some background in microeconomic theory makes the reading easier

Crime and Regulation Fiona Haines, 2017-11-30 This volume brings together key articles in the burgeoning field of regulation The collection is interdisciplinary in keeping with study of regulation itself yet the book arranges and explores these articles to make the bewildering array of issues and concepts that comprise the study of regulation comprehensible to a criminological audience It will be of interest to all scholars and students of criminology and criminal justice as well as those concerned with reducing the crimes and harms of the powerful

issues and only recently begun to take account of the dependence of poor countries on their natural resources the link between acute poverty and environmental degradation and the problems associated with the management of local common property such as soil and soil cover water forests and their products animals and fisheries In this volume part of the WIDER Program on the Economics of the Environment expert contributors provide a set of authoritative studies of emerging development issues ranging from foundational matters to case studies original research in areas where there has been a paucity of work to survey papers They address both analytic and empirical issues on the role of environmental resources in the development process presenting explanations of existing situations and policies for the future A wealth of interests and backgrounds is represented and reflected in the cross fertilization between papers
