Abstract

*The struggle for a fair distribution of land consolidated social movements and put pressure on the Brazilian government to carry out agrarian reform. The government allocated rural workers to the settlements and created programs to strengthen family farming. The global concern with the sustainability of the planet has led scholars to think that family farming is an alternative for the reduction of poverty and for the preservation of the environment. Based on this principle, the **objective** of this study was to analyze whether family farming used in the family units of the Joana Darc III settlement in Rondônia contributes to sustainable development. **Materials and methods:** The research is characterized as descriptive and a case study. We use an instrument developed by Anjos¹⁷, semi-structured, divided into 6 blocks:*

Campari,Banco Mundial,1995 **The Dynamics of Deforestation and Economic Growth in the Brazilian Amazon** Lykke E. Andersen,2002-12-12 A multi disciplinary team of authors analyze the economics of Brazilian deforestation using a large data set of ecological and economic variables They survey the most up to date work in this field and present their own dynamic and spatial econometric analysis based on municipality level panel data spanning the entire Brazilian Amazon from 1970 to 1996 By observing the dynamics of land use change over such a long period the team is able to provide quantitative estimates of the long run economic costs and benefits of both land clearing and government policies such as road building The authors find that some government policies such as road paving in already highly settled areas are beneficial both for economic development and for the preservation of forest while other policies such as the construction of unpaved roads through virgin areas stimulate wasteful land uses to the detriment of both economic growth and forest cover *The Biogeochemistry of the Amazon Basin* Michael E. Amazonian Geographies Jacqueline Vadjunec, Marianne Schmink, 2014-07-16 Amazonia exists in our imagination as well as on the ground. It is a mysterious and powerful construct in our psyches yet shares multiple trans national borders and diverse ecological and cultural landscapes. It is often presented as a seemingly homogeneous place: a lush tropical jungle teeming with exotic wildlife and plant diversity as well as the various indigenous populations that inhabit the region. Yet since Conquest Amazonia has been linked to the global market and after a long and varied history of colonization and development projects Amazonia is peopled by many distinct cultural groups who remain largely invisible to the outside world despite their increasing integration into global markets and global politics. Millions of rubber tappers, neo native groups, peasants, river dwellers and urban residents continue to shape and re shape the cultural landscape as they adapt their livelihood practices and political strategies in response to changing markets and shifting linkages with political and economic actors at local, regional, national and international levels. This book explores the diversity of changing identities and cultural landscapes emerging in different corners of this rapidly changing region. This book was published as a special issue of the Journal of Cultural Geography.

Causes of Deforestation of the Brazilian Amazon Sérgio Margulis, Annotation. This title studies the role of cattle ranching, its dynamic and profitability in the expansion of deforestation in Brazilian Amazonia. It provides a social evaluation of deforestation in this region and presents and compares a number of different scenarios and proposed recommendations.

Biodiversity and Human Rights: The International Rules for the Protection of Biodiversity Elli Louka, 2021-11-22. The author of this study proposes a fundamental review of biodiversity protection policies. Instead of conservation/preservation, a shift to attention to ecosystem management with human rights and human dignity at the center is recommended. This study prescribes a comprehensive system for the protection of biodiversity. Human rights standards, free trade in wildlife and regulated free access to plant genetic resources are proposed as the elements of this system. Practitioners and scholars concerned with environmental issues, human rights and sustainable development problems will find this work of great interest. Amazonia and Global Change Michael Keller, Mercedes Bustamante, John Gash, Pedro Silva Dias, 2013-05-02. Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 186. Amazonia and Global Change synthesizes results of the Large Scale Biosphere Atmosphere Experiment in Amazonia (LBA) for scientists and students of Earth system science and global environmental change. LBA led by Brazil asks how Amazonia currently functions in the global climate and biogeochemical systems and how the functioning of Amazonia will respond to the combined pressures of climate and land use change such as wet season and dry season aerosol concentrations and their effects on diffuse radiation and photosynthesis. Increasing greenhouse gas concentration, deforestation, widespread biomass burning and changes in the Amazonian water cycle. Drought effects and simulated drought through rainfall exclusion.
