Eugene Hanley, Rae Zimmerman, 2005 Considering sustainability in its economic environmental and social contexts the contributors take stock of previous research on large technical systems and discuss their sustainability from three main perspectives uses cities and rules and institutions *Shaping Urban Infrastructures* Simon Guy, Simon Marvin, Will

Medd, Timothy Moss, 2012-06-25 Cities can only exist because of the highly developed systems which underlie them ensuring that energy clean water etc are moved efficiently from producer to user and that waste is removed The urgent need to make the way that these services are provided more environmentally socially and economically sustainable means that these systems are in a state of transition from centralized to decentralized energy from passive to smart infrastructure from toll free to road pricing Such transitions are widely studied in the context of the influence of service providers users and regulators Until now however relatively little attention has been given to the growing role of intermediaries in these systems These consist of institutions and organizations acting in between production and consumption for example NGOs who develop green energy labelling schemes in collaboration with producers and regulators to guide the user consultants who advise businesses on how to save resources and travel agents who match users with providers Such intermediaries are in a position to shape the direction that technological transitions take and ultimately the sustainability of urban networks This book presents the first authoritative collection of research and analysis of the intermediaries that underpin the transitions that are taking place within urban infrastructures showing how intermediaries emerge the role that they play in key sectors including energy water waste and building and what impact they have on the governance of urban socio technical networks

Beyond the Networked City Olivier Coutard, Jonathan Rutherford, 2015-12-14 Cities around the world are undergoing profound changes In this global era we live in a world of rising knowledge economies digital technologies and awareness of environmental issues The so called modern infrastructural ideal of spatially and socially ubiquitous centrally governed infrastructures providing exclusive homogeneous services over extensive areas has been the standard of reference for the provision of basic essential services such as water and energy supply This book argues that after decades of undisputed domination this ideal is being increasingly questioned and that the network ideology that supports it may be waning In order to begin exploring the highly diverse fluid and unstable landscapes emerging beyond the networked city this book identifies

dynamics through which a break with previous configurations has been operated and new brittle zones of socio technical controversy through which urban infrastructure and its wider meaning are being negotiated and fought over It uncovers across a diverse set of urban contexts new ways in which processes of urbanization and infrastructure production are being combined with crucial sociopolitical implications through shifting political economies of infrastructure which rework resource distribution and value creation through new infrastructural spaces and territorialities which rebundle socio technical systems for particular interests and claims and through changing offsets between individual and collective appropriation experience and mobilization of infrastructure With contributions from leading authorities in the field and drawing on theoretical advances and original empirical material this book is a major contribution to an ongoing infrastructural turn in urban studies and will be of interest to all those concerned by the diverse forms and contested outcomes of contemporary urban change across North and South

Transforming Urban Water Supplies in India

Govind Gopakumar,2011-09-14 This book is a unique study of the politics of water supply infrastructures in three metropolitan cities in contemporary India Bangalore Chennai and Kochi It examines the process of change in water supply infrastructure initiated by notable Public Private Partnership s efforts in these three cities to reveal the complexity of state society relations in India at multiple levels at the state city and neighbourhood levels

Politics of Urban Runoff Andrew

Karvonen,2011 After describing the evolution of urban runoff practices Karvonen analyzes the urban runoff activities in Austin and Seattle two cities known for their highly contested public debates over runoff issues and exemplary stormwater management practices

Local Energy Autonomy Fanny Lopez,Margot Pellegrino,Olivier Coutard,2019-04-26

In recent years interest for local energy production supply and consumption has increased in academic and public debates In particular contemporary energy transition discourses and strategies often emphasize the search for increased local energy autonomy a phrase which can refer to a diverse range of configurations both in terms of the spaces and scales of the local territory considered and in terms of what is meant by energy autonomy This book explores policies projects and processes aimed at increased local energy autonomy with a particular focus on their spatial infrastructural and political dimensions In doing so the authors Sabine Barles Bruno Barroca Guilhem Blanchard Benoit Boutaud Arwen Colell Gilles Debizet Ariane Debourdeau Laure Dobigny Florian Dupont Z lia Hampikian Sylvie Jaglin Allan Jones Raphael M nard Alain Nada Angela Pohlmann Cyril Roger Lacan Eric Vidalenc improve our understanding of the always partial and controversial processes of energy relocation that articulate forms of local metabolic self sufficiency socio technical decentralization and political empowerment Comprising fifteen chapters the book is divided into four parts Governance and Actors Urban Projects and Energy Systems Energy Communities and The Challenges of Energy Autonomy

Intelligent Infrastructure T. F.

Tierney,2017-02-03 While many of its traditional elements such as roads and utilities do not change urban infrastructure is undergoing a fascinating and necessary transformation in the wake of new information and communication technologies This

volume brings together many of the most important new voices in the fields impacting modern urban infrastructure to explore this revolutionary change in the city Increasingly it is connective systems rather than built forms that bind a city together Intelligent infrastructure confers upon a city previously unimagined levels of adaptability with mobile telephony serving to organize people and events on the move and in real time Beginning with a consideration of invisible networks the sociohistorical systems that contribute to and constitute urbanity the essays collected here examine a variety of actual tools from handheld devices to autonomous vehicles within a fully networked built environment the smart city This book argues that knowledge of both the visible and invisible components information energy sustainability transportation housing and social practices are critical to understanding the urban environment The dynamic and diverse cast of contributors includes Mitchell Schwarzer Frederic Stout Anthony Townsend Carlo Ratti of the MIT SENSEable City Lab Mitchell Joachim of Terreform ONE and many other innovators who are changing the urban landscape Critical Infrastructure Alan T.

Murray, Tony Grubestic, 2007-05-05 This text brings together differing geographic perspectives in modeling and analysis in order to highlight infrastructure weaknesses or plan for their protection Offering new methodological approaches the book explores the potential consequences of critical infrastructure failure stemming from both man made and natural disasters The approaches employed are wide ranging including geographic economic and social perspectives *Materializing Europe*

A. Badenoch, A. Fickers, 2010-10-27 This book explores the relationships between European integration and material infrastructures Taking transnational infrastructures as the focal point of study the book focuses on the various forms of mediation between the material institutional and discursive levels of European integration and fragmentation in a truly transnational perspective **Conceptualizing Germany's Energy Transition** Ludger Gailing, Timothy Moss, 2016-05-06

This is the first book to explore ways of conceptualizing Germany's ongoing energy transition Although widely acclaimed in policy and research circles worldwide the Energiewende is poorly understood in terms of social science scholarship There is an urgent need to delve beyond descriptive accounts of policy implementation and contestation in order to unpack the deeper issues at play in what has been termed a grand societal transformation The authors approach this in three ways First they select and characterize conceptual approaches suited to interpreting the reordering of institutional arrangements socio material configurations power relations and spatial structures of energy systems in Germany and beyond Second they assess the value of these concepts in describing and explaining energy transitions pinpointing their relative strengths and weaknesses and exploring areas of complementarity and incompatibility Third they illustrate how these concepts can be applied individually and in combination to enrich empirical research of Germany's energy transition *Remaking Berlin* Timothy Moss, 2020-09-29 An examination of Berlin's turbulent history through the lens of its water and energy infrastructures In *Remaking Berlin* Timothy Moss takes a novel perspective on Berlin's turbulent twentieth century history examining it through the lens of its water and energy infrastructures He shows that through a century of changing regimes

geopolitical interventions and socioeconomic volatility Berlin's networked urban infrastructures have acted as medium and manifestation of municipal national and international politics and policies Moss traces the coevolution of Berlin and its infrastructure systems from the creation of Greater Berlin in 1920 to remunicipalization of services in 2020 encompassing democratic fascist and socialist regimes Throughout he explores the tension between obduracy and change in Berlin's infrastructures Examining the choices made by utility managers politicians and government officials Moss makes visible systems that we often take for granted Moss describes the reorganization of infrastructure systems to meet the needs of a new unitary city after Berlin's incorporation in 1920 and how utilities delivered on political promises the insidious embedding of repression racism autarky and militarization within the networked city under the Nazis and the resilience of Berlin's infrastructures during wartime and political division He examines East Berlin's socialist infrastructural ideal and its under resourced systems West Berlin's insular existence and its aspirations of system autarky and reunified Berlin's privatization of utilities subsequently challenged by social movements Taking Berlin as an exemplar Moss's account will inspire researchers to take a fresh look at urban infrastructure histories offering new ways of conceptualizing the multiple temporalities and spatialities of the networked city

The Global Challenge of Encouraging Sustainable Living Shane Fudge, Michael Peters, Steven M. Hoffman, Walter Wehrmeyer, 2013-11-29 This fascinating book will prove a thought provoking read for academics researchers and students in the fields of environmental studies _ particularly sustainability _ and public policy Practitioners and policymakers concerned with achieving sustainable development will find this book a valuable resource [Green Technologies: Concepts, Methodologies, Tools and Applications](#) Management Association, Information Resources, 2011-03-31 Green Technologies Concepts Methodologies Tools and Applications assembles the most up to date collection of research results and recent discoveries in environmental and green technology This comprehensive anthology covers a wide range of topics in green technology

Knowledge Networks Denise Bedford, Thomas W. Sanchez, 2021-10-26 Knowledge Networks describes the role of networks in the knowledge economy explains network structures and behaviors walks the reader through the design and setup of knowledge network analyses and offers a step by step methodology for conducting a knowledge network

analysis *The Connected City* Zachary P. Neal, 2012-08-06 The Connected City explores how thinking about networks helps make sense of modern cities what they are how they work and where they are headed Cities and urban life can be examined as networks and these urban networks can be examined at many different levels The book focuses on three levels of urban networks micro meso and macro These levels build upon one another and require distinctive analytical approaches that make it possible to consider different types of questions At one extreme micro urban networks focus on the networks that exist within cities like the social relationships among neighbors that generate a sense of community and belonging At the opposite extreme macro urban networks focus on networks between cities like the web of nonstop airline flights that make face to face business meetings possible This book contains three major sections organized by the level of analysis and scale of network Throughout these sections when a new methodological concept is introduced a separate method note provides a brief and accessible introduction to the practical issues of using networks in research What makes this book unique is that it synthesizes the insights and tools of the multiple scales of urban networks and integrates the theory and method of network analysis The Network Society Louis Albrechts, Seymour Mandelbaum, 2007-05-07 Essential reading for graduate level courses in urban studies city and regional planning and urban design Albrecht and Mandelbaum s text examines the challenges that the new paradigm of the Network Society create for Urban and Regional Planning

The Top Books of the Year Sustaining Urban Networks The Social Diffusion Of Large Technical Systems The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous engrossing novels captivating the hearts of readers worldwide. Lets delve into the realm of popular books, exploring the engaging narratives that have enthralled audiences this year. The Must-Read : Colleen Hoover's "It Ends with Us" This heartfelt tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover skillfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This captivating historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Sustaining Urban Networks The Social Diffusion Of Large Technical Systems : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and thrilling novel that will keep you wondering until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
