Polymers Niyazi, Savenkova, 2006-11-14 Photodegradation and light stabilization are very important aspects of polymer aging Polymer degradation includes different types of processes thermodegradation oxidation acting of ozone photodegradation radiation hydrolysis mechanical degradation and biodegradation It is very important to know the mechanism of polymer degradation in order to select stabilizers against the degradation This volume presents the analysis of achievements in the field of photodegradation of polymers It includes first of all data of Russian investigators who have decisively contributed in the development of this field of knowledge the schools headed by academicians V V Korshak N M Emanuel N S Enikolopov A A Berlin and many others *Developments in Polymer Degradation--6*, 1985 *Developments in Polymer Degradation [Vol 1 - 6]*. Developments in Polymer Degradation—7 N. Grassie, 2011-10-31 The purpose of this volume like that of its predecessors in the series is to present a selection of topics which are representative of the continually expanding area of polymer degradation It will be obvious that some of these topics emanate from academic studies others from more applied backgrounds but it is anticipated that all will be seen to be of vital relevance to one or other of the currently advancing fields of polymer technology The first two chapters deal with specific classes of polymers and particularly with their mechanisms and products of thermal degradation Thus in Chapter 1 Dr McNeill discusses the reactions of the ammonium alkali and alkaline earth metal salts of poly methacrylic acid and their copolymers with methyl methacrylate These water soluble ionomers have valuable technological applications In Chapter 2 Professor Montaudo and Dr Puglisi perform a valuable service by drawing together and critically reviewing for the first time to my knowledge the mechanisms of thermal degradation of the various classes of condensation polymers which are of industrial significance This includes for example the polyurethanes polyureas polyesters polycarbonates polyamides polyimides polyethers polysulphides polysulphones polyschiff bases polysiloxanes and polyphosphazenes
