**Comprehensive Organic Functional Group Transformations: Synthesis: carbon with one heteroatom attached by a single bond** Alan R. Katritzky, Otto

Meth-Cohn, Charles Wayne Rees, 1995-12-29 [Handbook of Organophosphorus Chemistry](#) Robert Engel, 1992-06-19 This practical work summarizes the development of organophosphorus chemistry in topical areas and details the discipline's current state providing applications and experimental procedures throughout Written by 18 leading authorities in the field the *Handbook of Organophosphorus Chemistry* examines advances in the mechanistic understanding of the Perkow and related organophosphorus reactions describes methods for the reduction of quinquivalent to trivalent phosphorus and their applications to standard synthetic procedures emphasizes the preparation of phosphonates bearing hydroxy amino and thiol functions at the alpha position relative to the phosphoryl group reviews the basics of NMR as it applies to the <sup>31</sup>P nucleus considering the use of the latest measurement techniques in solving structural and mechanistic problems compares the characteristics of polymer based and monomeric materials and presents recent progress in the design of insecticides and

covers their chemical and biological characteristics. Generously referenced with close to 3000 bibliographic citations, the Handbook of Organophosphorus Chemistry is an important volume for organic medicinal and agricultural chemists and biochemists, pharmacists, chemical engineers, and graduate level students in these disciplines. **Carbon-phosphorus Bond Formation** Yamina Belabassi, 2009. The work presented in this dissertation deals with the development of new methodologies for P-C bond formation as well as synthesizing biologically relevant organophosphorus compounds. A distinct emphasis is given to the important synthetic targets, the H-phosphinates. A review of relevant literature is provided in Chapter 1. Chapter 2 describes the synthesis and structural analyses of triphenylmethyl-containing phosphorus compounds. For the first time, both phosphonothioic and boranophosphonic acids have been characterized by single X-ray diffraction. The third chapter details the preparation and the reactivity of phosphine-borane complexes. Novel dialkoxyposphine-borane complexes were introduced both as general synthetic intermediates for the preparation of H-phosphinates or disubstituted phosphinic acids and as boranophosphonate precursors. Related to this chemistry, silylation of an H-phosphate intermediate can also be conducted, and the resulting phosphonite protected with borane. This allows the temporary protection of the sensitive P-H group so that manipulations of the alkyl chain might be conducted. In chapter 4, the palladium-catalyzed cross-coupling reaction of dialkylphosphites with aryl and heteroaryl halides is presented. An efficient, versatile, and economically attractive alternative to the original Hirao cross-coupling by using only 1 mol% or less Pd(OAc)<sub>2</sub>/dppf is described. Moreover, the first example of palladium-catalyzed P-C bond formation between activated aryl chlorides and a phosphite is herein reported. Chapter 5 focuses on the free radical hydrophosphinylation of alkynes. The triethylborane-initiated radical addition of sodium hypophosphite to terminal alkyne affords the previously unknown 1,1-bis(H-phosphinates) precursors of the biologically relevant 1,1-bisphosphonates, e.g., treatment of bone diseases. Thus, the oxidative conversion of 1,1-bis(H-phosphinates) to the corresponding bisphosphonates, as well as the synthesis of a series of bioconjugates (steroids, carbohydrates, fluoroquinolones) was investigated. In the last chapter, the palladium-catalyzed hydrophosphinylation of hypophosphorous acid derivatives to terminal alkynes is reported. In an effort to improve the regioselectivity of the reaction, various terminal alkynes were tested, as well as the solvent and catalyst system. **Stereoselective Synthesis of Drugs and Natural Products** Vasily

Andrushko, Natalia Andrushko, 2013-08-16. Brings together the best tested and proven stereoselective synthetic methods. Both the chemical and pharmaceutical industries are increasingly dependent on stereoselective synthetic methods and strategies for the generation of new chiral drugs and natural products that offer specific 3-D structures. With the publication of Stereoselective Synthesis of Drugs and Natural Products, researchers can turn to this comprehensive two-volume work to guide them through all the core methods for the synthesis of chiral drugs and natural products. Stereoselective Synthesis of Drugs and Natural Products features contributions from an international team of synthetic chemists and pharmaceutical and natural product researchers. These authors have reviewed the tremendous body of literature in the field in order to compile a

set of reliable tested and proven methods alongside step by step guidance This practical resource not only explores synthetic methodology but also reaction mechanisms and applications in medicinal chemistry and drug discovery The publication begins with an introductory chapter covering general principles and methodologies nomenclature and strategies of stereoselective synthesis Next it is divided into three parts Part One General Methods and Strategies Part Two Stereoselective Synthesis by Bond Formation including C C bond formation C H bond formation C O bond formation C N bond formation Other C heteroatom formation and other bond formation Part Three Methods of Analysis and Chiral Separation References in every chapter serve as a gateway to the literature in the field With this publication as their guide chemists involved in the stereoselective synthesis of drugs and natural products now have a single expertly edited source for all the methods they need

**Carbon-phosphorus and Oxygen-phosphorus Bond Formation** Henry C. Fisher, 2014 The work in this dissertation deals with the continued development of new methodologies for P C and P O bond formation using alternative methods that avoid the use of  $\text{PCl}_3$  A review of the relevant literature that proceeds this work is presented in Chapter 1 Chapter 2 describes the study of the P III to P V tautomerization of phosphinylidene compounds and the structural influences that effect the thermodynamic and kinetic properties to favor the more reactive P III species A collaboration using both computational and experimental methods show that electron withdrawing groups such as phenyl stabilize the tautomerization of phosphinylidene compounds The second part of this work highlights the influence of various catalysts on P III to P V tautomerization Using computational chemistry as a screening tool a variety of organic acids and bases were tested The calculations and experimental results are in good agreement Chapter 3 describes the work to develop the nickel catalyzed hydrophosphinylation of unactivated alkenes an extension of the work started with the nickel catalyzed hydrophosphosphinylation of alkynes The results show that nickel chloride is pre activated to an active Ni 0 species and can be stabilized by the inexpensive bisphosphine ligand ethylbis diphenylphosphine dppe The reaction occurs at room temperature and works on a variety of different alkene substrates Other manipulations used in tandem with the initial nickel hydrophosphinylation are highlighted and show the reaction to be a versatile tool for making alkyl H phosphinate derivatives as precursors for further use Chapter 4 details the development of manganese promoted intermolecular and intramolecular additions of alkenes alkynes and aryl compounds with H phosphinates is described The system utilizing catalytic  $\text{Mn}(\text{OAc})_2$  either neat or in DMSO is successful for a variety of different alkenes and two alkyne substrates A more efficient and cost effective system was recently developed for H phosphinate arylations using catalytic  $\text{Mn}(\text{OAc})_2$  and  $\text{MnO}_2$  as an oxidant and further applied to alkene phosphonochlorination with  $\text{LiCl}$  In Chapter 5 nickel catalyzed oxidation of alkyl hypophosphites is utilized to prepare ubiquitous alkyl H phosphonates starting from hypophosphorous acid and avoiding the use of  $\text{PCl}_3$  The reaction can be considered a form of water splitting The studies show that after the initial esterification step  $\text{NiCl}_2$  or  $\text{NiSiO}_2$  is enough to oxidize the first P H bond to form the desired phosphonate The reaction has been applied to the synthesis
