Topical coverage includes systems engineering life cycles and management, risk management, discovering system requirements, configuration management, cost management, total quality management, reliability, maintainability and availability, concurrent engineering, standards in systems engineering, system architectures, systems design, systems integration, systematic measurements, human supervisory control, managing organizational and individual decision making, systems reengineering, project planning, human systems integration, information technology and knowledge management, and more. The handbook is written and edited for systems engineers in industry and government and to serve as a university reference handbook in systems engineering and management courses. By focusing on systems engineering processes and systems management, the editors have produced a long-lasting handbook that will make a difference in the design of systems of all types that are large in scale and/or scope.
Systems Analysis and Systems Engineering in Environmental Remediation Programs at the Department of Energy Hanford Site National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on

Remediation of Buried and Tank Wastes,1998-08-21 The primary purpose of systems engineering is to organize information and knowledge to assist those who manage direct and control the planning development production and operation of the systems necessary to accomplish a given mission However this purpose can be compromised or defeated if information production and organization becomes an end unto itself Systems engineering was developed to help resolve the engineering problems that are encountered when attempting to develop and implement large and complex engineering projects It depends upon integrated program planning and development disciplined and consistent allocation and control of design and development requirements and functions and systems analysis The key thesis of this report is that proper application of systems analysis and systems engineering will improve the management of tank wastes at the Hanford Site significantly thereby leading to reduced life cycle costs for remediation and more effective risk reduction The committee recognizes that evidence for cost savings from application of systems engineering has not been demonstrated yet
