ABSTRACT

Systems-centered therapy (SCT) is a theory-based practice developed from a theory of living human systems (Agazarian, 1997, 2012). Viewing these group participants through an SCT lens enables us to de-pathologize, humanize, legitimize, and universalize the survivor roles that are depicted in the descriptions of the group members, both attachment and social roles. We also have rewritten an excerpt of the group transcript as it might unfold if the SCT norm of functional subgrouping (which develops the inter-person system) was established in the group. Each group member's survivor roles are discussed in terms of how SCT methods are used to weaken the restraining forces in the participants' roles relevant for the group's phase of development. Finally, the group transcript is discussed from an SCT view: The group-system-as-a-whole is seen as predominantly in flight, with some emerging fight energy that is re-vectored by the group and the leader back to flight.

Systems-centered therapy (SCT) is a theory-based approach derived from a theory of living human systems that defines a “hierarchy of isomorphic systems that are energy-organizing, goal-directed and self-correcting” (Agazarian, 1997, p. 18). Each theoretical construct was operationally defined and techniques evolved so that every SCT intervention tests the validity of the theory and the reliability of its practice. As part of ongoing system-correction, SCT leaders assess the impact of every intervention by observing whether it is a driving force or restraining force for system development.

In therapy groups, SCT conceptualizes a hierarchy of three system levels for intervention: 1) the person-system, with its goal of survival; 2) the member or
