Systems Networks And Computation:

Fields, Networks, Computational Methods, and Systems in Modern Electrodynamics Peter Russer, Mauro Mongiardo, 2013-04-17 On June 1st 2004 the Faculty of Electrical Engineering and Information Technology of the Technische Universität München bestowed the degree of the doctor honoris causa to Leopold B Felsen for extraordinary achievements in the theory of electromagnetic fields On this occasion on June 1st and 2nd 2004 at the Technische Universität München a symposium on Fields Networks Computational Methods and Systems A Modern View of Engineering Electrodynamics in honor of Leopold B Felsen was organized The symposium topic focused on an important area of Leopold Felsen research interests and as the title emphasizes on a modern view of applied Electrodynamics While the fundamental physical laws of electrodynamics are well known research in this field is experiencing a steady continuous growth The problem solving approaches of say twenty years ago may seem now fairly obsolete since considerable progress has been made in the meantime In this monograph we collect samples of present day state of the art in dealing with electromagnetic fields their network theory representation their computation and finally on system applications The network formulation of field problems can improve the problem formulation and also contribute to the solution methodology Network theory systematic approaches for circuit analysis are based on the separation of the circuit into the connection circuit and the circuit elements Many applications in science and technology rely on computations of the electromagnetic field in either man made or natural complex structures

Natural Language Generation in Artificial Intelligence and Computational Linguistics Cecile L. Paris, William R. Swartout, William C. Mann, 2013-03-14 One of the aims of Natural Language Processing is to facilitate the use of computers by allowing their users to communicate in natural language There are two important aspects to person machine communication understanding and generating While natural language understanding has been a major focus of research natural language generation is a relatively new and increasingly active field of research This book presents an overview of the state of the art in natural language generation describing both new results and directions for new research The principal emphasis of natural language generation is not only to facilitate the use of computers but also to develop a

computational theory of human language ability In doing so it is a tool for extending clarifying and verifying theories that have been put forth in linguistics psychology and sociology about how people communicate A natural language generator will typically have access to a large body of knowledge from which to select information to present to users as well as number of expressing it Generating a text can thus be seen as a problem of our ways decision making under multiple constraints constraints from the propositional knowledge at hand from the linguistic tools available from the communicative goals and intentions to be achieved from the audience the text is aimed at and from the situation and past discourse Researchers in generation try to identify the factors involved in this process and determine how best to represent the factors and their dependencies

Neural Network Computing for the Electric Power Industry Dejan J. Sobajic, 2013-06-17 Power system computing with neural networks is one of the fastest growing fields in the history of power system engineering Since 1988 a considerable amount of work has been done in investigating computing capabilities of neural networks and understanding their relevance to providing efficient solutions for outstanding complex problems of the electric power industry A principal objective of a power utility is to provide electric energy to its customers in a secure reliable and economic manner Toward this aim utility personnel are engaged in a variety of activities in areas of supervisory control and monitoring evaluation of operating conditions operation planning and scheduling system development equipment testing etc Over the past decades significant advances have been made in the development of new concepts design of hardware and software systems and implementation of solid state devices which all contributed to the steadily improving power system performance that we are experiencing today Advanced information processing technologies played an important role in these development efforts Members of the Special Interest Group for Power Engineering of the INNS recognized the need for bringing together leading researchers in the field of neurocomputing with experts from power utilities and manufacturing companies to assess the current state of affairs and to explore the directions of further research and practice This book is based on The Summer Workshop on Neural Network Computing for the Electric Power Industry which brought together approximately forty specialists with backgrounds in power engineering system operation and planning neural network theory and AI systems design An informal and highly inspiring atmosphere of the workshop facilitated open discussion and exchange of expertise between the participants

Computational Intelligence for Network Structure Analytics Maoguo Gong, Qing Cai, Lijia Ma, Shanfeng Wang, Yu Lei, 2017-09-19 This book presents the latest research advances in complex network structure analytics based on computational intelligence CI approaches particularly evolutionary optimization Most if not all network issues are actually optimization problems which are mostly NP hard and challenge conventional optimization techniques To effectively and efficiently solve these hard optimization problems CI based network structure analytics offer significant advantages over conventional network analytics techniques

Meanwhile using CI techniques may facilitate smart decision making by providing multiple options to choose from while conventional methods can only offer a decision maker a single suggestion In addition CI based network structure analytics can greatly facilitate network modeling and analysis And employing CI techniques to resolve network issues is likely to inspire other fields of study such as recommender systems system biology etc which will in turn expand CI s scope and applications As a comprehensive text the book covers a range of key topics including network community discovery evolutionary optimization network structure balance analytics network robustness analytics community based personalized recommendation influence maximization and biological network alignment Offering a rich blend of theory and practice the book is suitable for students researchers and practitioners interested in network analytics and computational intelligence both as a textbook and as a reference work **Secure Edge Computing** Mohiuddin Ahmed,Paul

Haskell-Dowland,2021-08-12 The internet is making our daily life as digital as possible and this new era is called the Internet of Everything IoE Edge computing is an emerging data analytics concept that addresses the challenges associated with IoE More specifically edge computing facilitates data analysis at the edge of the network instead of interacting with cloud based servers Therefore more and more devices need to be added in remote locations without any substantial monitoring strategy This increased connectivity and the devices used for edge computing will create more room for cyber criminals to exploit the system s vulnerabilities Ensuring cyber security at the edge should not be an afterthought or a huge challenge The devices used for edge computing are not designed with traditional IT hardware protocols There are diverse use cases in the context of edge computing and Internet of Things IoT in remote locations However the cyber security configuration and software updates are often overlooked when they are most needed to fight cyber crime and ensure data privacy Therefore the threat landscape in the context of edge computing becomes wider and far more challenging There is a clear need for collaborative work throughout the entire value chain of the network In this context this book addresses the cyber security challenges associated with edge computing which provides a bigger picture of the concepts techniques applications and open research directions in this area In addition the book serves as a single source of reference for acquiring the knowledge on the technology process and people involved in next generation computing and security It will be a valuable aid for researchers higher level students and professionals working in the area **Advances in Intelligent Computing - IPMU '94**

peer P2P computing is currently attracting enormous public attention spurred by the popularity of file sharing systems such as Napster Gnutella Morpheus Kaza and several others In P2P systems a very large number of autonomous computing nodes the peers rely on each other for services P2P networks are emerging as a new distributed computing paradigm because of their potential to harness the computing power and the storage capacity of the hosts composing the network and because they realize a completely open decentralized environment where everybody can join in autonomously Although researchers working on distributed computing multiagent systems databases and networks have been using similar concepts for a long time it is only recently that papers motivated by the current P2P paradigm have started appearing in high quality conferences and workshops In particular research on agent systems appears to be most relevant because multiagent systems have always been thought of as networks of autonomous peers since their inception Agents which can be superimposed on the P2P architecture embody the description of task environments decision support capabilities social behaviors trust and reputation and interaction protocols among peers The emphasis on decentralization autonomy ease and speed of growth that gives P2P its advantages also leads to significant potential problems Most prominent among these are coordination the ability of an agent to make decisions on its own actions in the context of activities of other agents and scalability the value of the P2P systems in how well they self organize so as to scale along several dimensions including complexity heterogeneity of peers robustness traffic redistribution etc This book brings together an introduction three invited articles and revised versions of the papers presented at the Second International Workshop on Agents and Peer to Peer Computing AP2PC 2003 held in Melbourne Australia July 2003
