An Introduction to Systems Science John N. Warfield, 2006 This is the first book that renders a thorough discussion of systems science It draws on material from an extensive collection of external sources including several other books and a special library collection complete with videotape empirical evidence of applicability of the theory to a wide variety of circumstances This is essential because systems science must be responsive to diverse human situations of the widest difficulty and it must fill the void that the specific sciences cannot fill because these sciences are insensitive to the necessities of reconciling disparate views of multiple observers and incorporating local conditions in hypotheses that precede inductive explorations

Crafting Efficiency in Managerial Costing System Design Pieter W. Buys, 2024-03-25 This book focuses on an integrated approach in developing a model to guide the design of effective managerial costing systems While the focus is on the manufacturing industry information in the book will be useful to other industries as well To achieve this the book utilizes the action design research methodology founded within a design science paradigm which aims to develop pragmatic solutions to an actually experienced business problem or class of business problems After which the book then explains the elaborated action design research process which is a researcher practitioner approach to designing pragmatic industry experienced problems in an academically sound manner In doing so the book illustrates how a design process embedded in the engineering field i e design science research can successfully engineer effective managerial costing systems The book thus includes both academic researchers and industry practitioners applying the contextual iterative solution development activities i e i problem formulation and refinement ii the solution design and iii verification and validation of the proposed solution The final proposed solution presented in the book is presented in a process model format including systematic process flow illustrations and developmental guides which are all supportive in enabling the design of effective managerial costing systems

Non-Functional Requirements in Software Engineering Lawrence Chung, Brian A. Nixon, Eric Yu, John Mylopoulos, 2012-12-06 Non Functional Requirements in Software Engineering presents a systematic and pragmatic approach to building quality into software systems Systems must exhibit software quality attributes such as accuracy performance security and modifiability However such non functional requirements NFRs are difficult to address in many projects even though there are many techniques to meet functional requirements in order to provide desired functionality This is particularly true since the NFRs for each system typically interact with each other have a broad impact on the system and may be subjective To enable developers to systematically deal with a system s diverse NFRs this book presents the NFR Framework Structured graphical facilities are offered for stating NFRs and managing them by refining and inter relating NFRs justifying decisions and determining their impact Since NFRs might not be absolutely achieved they may simply be satisfied sufficiently satisfied To reflect this NFRs are represented as softgoals whose interdependencies such as tradeoffs and synergy are captured in graphs The impact of decisions is qualitatively propagated through the graph to determine how well a chosen target system satisfies its NFRs Throughout development developers direct the process using their expertise while being aided by catalogues of knowledge about NFRs development techniques and tradeoffs which can all be explored reused and customized Non Functional Requirements in Software Engineering demonstrates the applicability of the NFR Framework to a variety of NFRs domains system characteristics and application areas This will help readers apply the

Framework to NFRs and domains of particular interest to them Detailed treatments of particular NFRs accuracy security and performance requirements along with treatments of NFRs for information systems are presented as specializations of the NFRFramework Case studies of NFRs for a variety of information systems include credit card and administrative systems The use of the Framework for particular application areas is illustrated for software architecture as well as enterprise modelling Feedback from domain experts in industry and government provides an initial evaluation of the Framework and some case studies Drawing on research results from several theses and refereed papers this book s presentation terminology and graphical notation have been integrated and illustrated with many figures Non Functional Requirements in Software Engineering is an excellent resource for software engineering practitioners researchers and students Process-Oriented Dynamic Capabilities Ralf Plattfaut,2013-12-02 This book introduces a process oriented dynamic capability framework to study both service innovation and Business Process Management BPM Results from applications in several case studies and surveys are reported They reflect e g capability development and maturity models Based on these findings a method to support service innovation is introduced This method can help organizations in developing new service business models in a more effective and efficient way In today s networked service society service innovation becomes increasingly important Reasons for this development can be found in the transformation of economies and in the growing importance of product service systems The concept of service innovation is related to Business Process Management BPM and shares several important traits They both are process oriented dynamic capabilities to adapt service processes to changing environments

Collaborative Networks and Their Breeding Environments Luis M. Camarinha-Matos,Hamideh Afsarmanesh,Angel Ortiz,2005-08-31 Progress in collaborative networks continues showing a growing number of manifestations and has led to the acceptance of Collaborative Networks CN as a new scientific discipline Contributions to CN coming from multiple reference disciplines has been extensively investigated In fact developments in CN have benefited from contributions of multiple areas namely computer science computer engineering communications and networking management economy social sciences law and ethics etc Furthermore some theories and paradigms defined elsewhere have been suggested by several research groups as promising tools to help define and characterize emerging collaborative organizational forms Although still at the beginning of a long way to go there is a growing awareness in the research and academic world for the need to establish a stronger theoretical

foundation for this new discipline and a number of recent works are contributing to this goal From a utilitarian perspective agility has been pointed out as one of the most appealing characteristics of collaborative networks to face the challenges of a fast changing socio economic context However during the last years it became more evident that finding the right partners and establishing the necessary preconditions for starting an effective collaboration process are both costly and time consuming activities and therefore an inhibitor of the aimed agility Among others obstacles include lack of information e g non availability of catalogs with normalized profiles of organizations and lack of preparedness of organizations to join the collaborative process Overcoming the mismatches resulting from the heterogeneity of potential partners e g differences in infrastructures corporate culture methods of work and business practices requires considerable investment Building trust a pre requisite for any effective collaboration is not straight forward and requires time Therefore the effective creation of truly dynamic collaborative networks requires a proper context in which potential members are prepared to rapidly get engaged in collaborative processes The concept of breeding environment has thus emerged as an important facilitator for wider dissemination of collaborative networks and their practical materialization The PRO VE 05 held in Valencia Spain continues the 6th event in a series of successful working conferences on virtual enterprises This book includes selected papers from that conference and should become a valuable tool to all of those interested in the advances and challenges of collaborative networks
