T Cell Receptor:

The T Cell Receptor FactsBook Marie-Paule Lefranc, Gerard Lefranc, 2001-07-13 The T Cell Receptor FactsBook contains entries on all the 176 functional variable diversity joining and constant regions of the human T cell receptor including alpha beta gamma and delta loci Introductory chapters summarize information of T cell receptor chain synthesis chromosomal location and an overview of the human T cell receptor loci

The T-Cell Receptors Tak W. Mak, 2012-12-06 The importance of thymus dependent cells or T cells in the generation of a successful immune response was first realized in the early sixties In the following two decades a succession of elegant experiments established the antigen specificity of T cells and their ability to perform both as regulatory and effector cells T cells were shown to be essential in most immune reactions playing a crucial role in augmenting the activity of effector T and B cells against foreign antigen as well as in the suppression of effector activity against self antigens The means by which T cells differentiate foreign from self antigens is based on their recognition of antigen almost exclusively in the context of self major histocompatibility complex products unlike B cells which recognize an antigen alone It is this recognition mediated by the T cell receptor that sets into motion the diverse cell cell interactions which control the differentiation and regulation of the immune response Although its importance was well established the molecular nature of the T cell receptor remained elusive for two decades Many hypotheses as to its structure and precise function were put forward using immunoglobulin as a basis for conjecture but the Holy Grail of Immunology remained ephemeral until three years ago In the ensuing years both immunologists and molecular biologists have contributed to an explosion of data unsurpassed by any previous period in the field

T Cell Receptors John I. Bell, Michael J. Owen, M. J. Owen, Dr. Elizabeth Simpson, 1995 T cell receptor genes covers biochemical functional and genetic aspects of this key family of immunological molecules It should be essential reading for all those interested in the TCR and its function in health and disease It deals with the TCR protein its functional interactions with the signal transduction machinery of the T cell and with the structure and organization of the TCR genes It is the only comprehensive volume on the TCR and is written by leaders in the field Particularly useful is the tabulation and nomenclature of all the known TCR alpha and beta variable regions

The Human T-Cell Receptor Repertoire and Transplantation Peter van den Elsen, 2013-06-29 these analyses it became clear that the MHC class I molecule comprised a distinct groove on the external side of the molecule The sides of the groove are formed by the α helical structures of the α and β 1 2 domains and a floor which is formed by 8 antiparallel 13 strands The various polymorphic residues as determined from DNA sequence analysis are localized within these α helices and 13 plated sheets within the groove More importantly these analyses also revealed the presence of electron dense material in the groove This material was subsequently identified as a linear peptide of 8 10 amino acids long High resolution crystallographic analyses of the class I MHC structure have revealed the existence of so called pockets within the grooves of the MHC class I molecules These pockets designated A F exhibited allele specificity and are directly involved in

the binding of the peptide primarily through interaction with the dominant anchor residues as found in MHC class I associated peptides 6 7 9 11 The class II MHC antigens consist on the cell surface of a 34 kD α chain non covalently associated with a 28 kD β chain With the exception of the DR α chain all other MHC class II α and β chains are polymorphic

T Cells in Arthritis P. Miossec, W. van den Berg, G. Firestein, 1998-07-21 Rheumatoid arthritis RA is the most common and most severe form of inflammatory arthritis The pathogenesis of RA has been the subject of intense research for several decades The prevailing hypotheses have changed over the years and have attempted to incorporate the most recent data Although T cells represent an important component of the cells which infiltrate the joint synovium their contribution at a late stage of the disease remains a matter of debate The goal of this book is to outline the major arguments and data suggesting that T cells may or may not be central players in the pathogenesis of chronic RA While each of the editors and authors has his/her own bias as will be clear by reading the respective chapters our hope is that the readers will enjoy a complete and balanced view of the critical questions and experiments This is not just an intellectual exercise since the direction of future therapeutic interventions depends heavily on how one interprets the pathogenesis of RA and the contribution of T cells

Kuby Immunology Thomas J. Kindt, Richard A. Goldsby, Barbara A. Osborne, Janis Kuby, 2007 Originally authored by the award winning author Janis Kuby Immunology remains the best selling textbook for the undergraduate course The first and only true textbook written by professors who teach the undergraduate course it presents the most current concepts in an experimental context with clinical advances highlighted in boxes supported by the kind of helpful pedagogical tools that other books do not provide

Investigating and harnessing T-cell functions with engineered immune receptors and their ligands Bruno Laugel, 2015-01-22 T cells are an essential component of the immune system that provide protection against pathogen infections and cancer and are involved in the aetiology of numerous autoimmune and autoinflammatory pathologies Their importance in disease the relative ease to isolate expand and manipulate them ex vivo have put T cells at the forefront of basic and translational research in immunology Decades of study have shed some light on the unique way T cells integrate extrinsic environmental cues influencing an activation program triggered by interactions between peptide MHC complexes and the antigen recognition machinery constituted of clonally distributed T cell receptors and their co receptor CD4 or CD8 The manipulation of these molecular determinants in cellular systems or as recombinant proteins has considerably enhanced our ability to understand antigen specific T cell activation to

monitor ongoing T cell responses and to exploit T cells for therapy Even though these principles have given numerous insights in the biology of CD8 T cells that translate into promising therapeutic prospects as illustrated by recent breakthroughs in cancer therapy they have proven more challenging to apply to CD4 T cells This Research Topic aims to provide a comprehensive view of the recent insights provided by the use of engineered antigen receptors and their ligands on T cell activation and how they have been or could be harnessed to design efficient immunotherapies

Fundamental Immunology William E. Paul, 2008 Now thoroughly revised and updated this comprehensive up to date text is ideal for graduate students post doctoral fellows microbiologists infectious disease physicians and any physician who treats diseases in which immunologic mechanisms play a role

γδ T Cell Cancer Immunotherapy Marta Barisa, 2024-10-17 T Cell Cancer Immunotherapy Evidence Based Perspectives for Clinical Translation sets out and critically discusses the current clinical and relevant preclinical T cell immunotherapy landscape In five chapters field experts discuss the challenges facing T cell oncoimmunotherapy propose solutions and map next steps Particular attention is given to summarizing our understanding of the complex translationally relevant human T cell biology the evidence basis for designing T cell combination trials and data driven perspectives on what is known and what isn't about T cell therapeutic persistence Various perspectives are provided on how issues of cytotoxic effector function functional exhaustion and cytokine addiction can be mitigated using gene engineering A chapter is dedicated to the systematic review of all T cell immunotherapy trials to date and the cell therapy products that were used in these trials The final chapter discusses allograft persistence enhancement techniques in the context of T cell therapy covering lymphodepleting chemotherapy and synthetic stealth engineering

T Cell Cancer Immunotherapy Evidence Based Perspectives for Clinical Translation gives an updated and comprehensive insight into the current state of T cell immunotherapy which is of interest to existing translational T cell specialists the proliferating range of academic scientists and commercial scientists entering the field as well as clinicians who may encounter T cell immunotherapy in the clinic or are wishing to familiarize themselves with noncanonical lymphocyte immunotherapy Summarizes the cutting edge of oncology relevant T cell immunobiology Lays out clinical successes and failures to date Addresses the possible advantage of combining T cell based immunotherapy with conventional chemotherapy or checkpoint blockers Provides an up to date and well rounded discussion of a translationally commercially and scientifically relevant field

Gamma-delta T Cells Paul R. Bergstresser, Akira Takashima, 2001-01-01 Over the last 15 years since the discovery of the T cell receptor and genes rapid progress has been made toward the understanding of the biology of T cells They differ from

conventional T cells not only in T cell receptor composition but also in their development tissue distribution and physiological functions This volume contains seven chapters contributed by experts on different aspects of T cells including the natural ligands for T cell receptors IL 7 dependent regulation of T cell development cytokine mediated inter cellular communication of T cells with other cell types and their physiological functions in innate and adaptive immune responses The comprehensive review articles collected in this volume will be of interest to basic immunologists who wish to update their knowledge on the biology of T cells The book also provides a unique opportunity for non immunologists and clinicians to understand how the immune system is specifically equipped to protect the body against pathogens at the environmental interface *T-Cell Subsets and Cytokines Interplay in Infectious Diseases* Mustafa A.S.,Al-Attiyah R.J.,Nath I.,Chugh T.D.,1996 Presenting a wealth of new data on the interaction among T cell subsets and cytokines this book offers a fresh perspective on infectious diseases It provides useful insights into the nature and treatment of helminthic and mycobacterial infections with special emphasis on leprosy leishmaniasis malaria and trypanosomiasis The outcome of the host response to infectious agent is seen as depending upon the T cell subsets activated and the cytokines produced by them and other cells such as macrophages B cells and basophils Experts contributions shed new light on how TH0 cells are preferentially activated and differentiated into TH1 or TH2 subsets TH1 and TH2 cells and their cytokines induce both protective immune responses and adverse immune reactions to infectious agents cytokines modulate the response of infectious diseases to chemotherapy and cytokines their receptors and antagonist and anti cytokine antibodies can be used in therapy Those working in the fields of immunology parasitology microbiology and vaccine development particularly if they are interested in tropical diseases will find the volume an invaluable source of information **Biomedical Index to PHS-supported Research: pt. Schlegel,2024-06-13 The development clinical translation and recent efficacy of novel gene therapies targeting refractory malignancies has led to research that extends this technology to a variety of infectious and rheumatological diseases Unlike conventional drugs or antibodies T cells have the potential to target and exert effector function in response to disease in a dynamic manner acting as a living drug The most efficacious form of gene modified T cells to date is the chimeric antigen receptor CAR modified T cell which redirects the specificity of T cells to an antigen expressed by tumor cells Clinical experience with autologous CAR T cells primarily in hematologic malignancies has underscored the feasibility and safety of the approach while also demonstrating dramatic and sustained antitumor effects through mechanisms orthogonal to those of traditional anticancer therapies However several challenging obstacles must be surmounted in order to improve the broader efficacy of this approach **Index Medicus** ,2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings
