Published in 1999 The articles in this collection focus on instruction and writings arising from that instruction in philosophy and the arts during the sixteenth and seventeenth centuries with emphasis on Central Europe The introduction brings together and expands upon many of the topics discussed and conclusions reached in the remaining seven articles Four of these articles are devoted to examining the significance of two ancient authors Aristotle and Cicero and of two more recent ones Petrus Ramus and Bartholomew Keckermann The article on Keckermann is based in part on previously unpublished biographical and bibliographical source materials Two concepts encyclopedia and philosophy as utilized in the 16th and 17th centuries constitute the subject matter of separate articles And one article focuses primarily on curriculum plans written during the 16th and early 17th centuries These eight articles are based on a wide array of printed and manuscript source materials which are cited together with library archive locations and call numbers and which are made more easily accessible through three indices at the conclusion of this volume Chemistry Education and Contributions from History and Philosophy of Science Mansoor Niaz,2015-12-23 This book explores the relationship between the content of chemistry education and the history and philosophy of science HPS framework that underlies such education It discusses the need to present an image that reflects how chemistry developed and progresses It proposes that chemistry should be taught the way it is practiced by chemists as a human enterprise at the interface of scientific practice and HPS Finally it sets out to convince teachers to go beyond the traditional classroom practice and explore new teaching strategies The importance of HPS has been recognized for the science curriculum since the middle of the 20th century The need for teaching chemistry within a historical context is not difficult to understand as HPS is not far below the surface in any science classroom A review of the literature shows that the traditional chemistry classroom curricula and textbooks while dealing with concepts such as law theory model explanation hypothesis observation evidence and idealization generally ignore elements of the history and philosophy of science This book proposes that the conceptual understanding of chemistry requires knowledge and understanding of the history and philosophy of science Professor Niaz s book is most welcome coming at a time when there is an urgently felt need to upgrade the teaching of science The book is a huge aid for adding to the usual way presenting science as a series of mere facts also the necessary mandate to show how science is done and how science through its history and philosophy is part of the cultural development of humanity Gerald Holton Mallinckrodt Professor of Physics these are valence bond VB and molecular orbital MO theories He emphasizes the importance of having rival theories and interpretations in science and its advancement He further argues that this VB MO rivalry is still alive and together the two conceptual frames serve as the tool kit for thinking and doing chemistry in creative manners The author surveys chemistry textbooks in the light of the how the books preserve or not the balance between the two theories in describing various chemical phenomena This Talmudic approach of conceptual tension is a universal characteristic of any branch of evolving

wisdom As such Mansoor s book would be of great utility for chemistry teachers to examine how can they become more effective teachers by recognizing the importance of conceptual tension Sason Shaik Saeree K and Louis P Fiedler Chair in Chemistry Director The Lise Meitner Minerva Center for Computational Quantum Chemistry The Hebrew University of Jerusalem ISRAEL *APAIS 1994: Australian public affairs information service* , Round Table ,1865 *Parliamentary Papers* Great Britain.
