School Bullying and Mental Health Helen Cowie, Carrie-Anne Myers, 2017-07-20 *Bullying amongst young people* is a serious and pervasive problem and recent rapid advances in electronic communication technologies have provided even more tools for bullies to exploit. *School Bullying and Mental Health* collates current research evidence and theoretical perspectives about school bullying in one comprehensive volume, identifying the nature and extent of bullying and cyberbullying at school as well as its impact on children and young people's emotional health and well being. There are many negative consequences of bullying and children and young people who have been victimised often suffer long term psychological problems such as increased levels of anxiety, depressive symptoms, social isolation, loneliness and suicidal ideation. Perpetrators of bullying also have a heightened risk of experiencing problems such as anxiety and depression as well as eating disorders and antisocial behaviour. Founded on rigorous academic research, this important book tackles the negative consequences of bullying and bullying culture itself by examining the social and cultural contexts that perpetuate such behaviour from childhood through adolescence and potentially into adulthood. Containing contributions from an international team of authors, this book explores current interventions to prevent and reduce school bullying and to alleviate its negative effects on the mental health of children and young people. In depth discussion of the profound implications of this research for researchers, practitioners and policymakers makes this book essential reading for those interested in bullying culture and the mental health and well being of children and adolescents.
