Although personality assessment and delineation was attempted as early as the fifth century the intensive study of human personality characteristics and efforts to measure them are less than two hundred years old Instruments to measure the unconscious aspects of personality began to emerge early in the twentieth century largely as a result of the work of those interested in the measurement of human perception The Bender Gestalt Test was catapulted into prominence when World War II provided an urgent need for personality tests to diagnose huge numbers of American soldiers who were culturally and geographically diverse more than occasionally illiterate and often suffering from one of many psychiatric disorders or some degree of organic brain syndrome Since the Bender Gestalt Test could be administered to large groups of soldiers in five to ten minutes it became one of the most popular tests of that era and it has remained one of the five most popular and frequently used tests for the assessment of personality and neurologic abnormalities American academicians researchers and clinicians affected by the surge in cost containment measures of managed health care and the sharply reduced funding in outpatient and inpatient mental health services are seeking expeditious inexpensive solutions for complex often chronic problems The Bender Gestalt Test offers quick relatively culture free non verbal personality and neurologic information that is ideal for group administration Based on thirty years of experience with more than twenty thousand subjects of diverse ethnic and educational backgrounds as well as independent research conducted at the University of Miami Florida the system developed by Reichenberg and Raphael offers a new means of extending and increasing the dynamic personality assessment usage of the test As such it is of great use to researchers and practitioners in medical and psychiatric hospitals and counseling and assessment programs in both the public and private sectors

GUIDE TO THE QUALITATIVE SCORING SYSTEM FOR THE MODIFIED VERSION OF THE BENDER-GESTALT TEST Gary G. Brannigan, Nancy A. Brunner, 2002-01-01 With increased interest in predicting and ultimately preventing academic failure in children comes the need for effective preschool and primary school assessment The

first step in developing an effective assessment program is to select tests that will yield data needed for individual decision making One factor that has been shown to contribute to the prediction of children s academic achievement is visual motor integration skill The Qualitative Scoring System for the Modified Version of the Bender Gestalt Test was developed in the 1980s to measure visual motor integration skill in preschool and early elementary school children The assessment instrument utilizes six of the nine Bender Gestalt Test designs which are copied by the child It may be administered in either individual or group format The scoring system involves a six point scale used to judge the overall quality of each design Examiners will find the assessment instrument easy to administer score and interpret Further research has shown that the assessment instrument is a reliable and valid predictor of school achievement This book will describe the development and refinement of the Qualitative Scoring System for the Modified Version of the Bender Gestalt Test In addition it will provide detailed information and guidelines for administering scoring and interpreting the test Specifically there are separate chapters on administration and scoring standardization and norming reliability and validity and interpretation In short the book contains everything psychologists and educational specialists need to know to use the Qualitative Scoring System for the Modified Version of the Bender Gestalt Test *Configurations of Creatives and Non-creatives on the Hutt Adaptation of the Bender-Gestalt Test* Paula LaNelle Tuoti,1974 *Projective Techniques in Personality Assessment* Albert Í.
