

CHAPTER III

EARLY RELATIONSHIPS

From the time of its conception the child is moving toward the attainment of an individual life. As in the womb his body is being prepared for an individual and separate existence, so during the necessary identifications of infancy his psyche is being prepared for separate and individual life. At each step forward he is beset by two great currents which from his birth to his death he must meet whenever he is confronted with a new situation: the surge toward the new, and the pull backward toward the safety of the old.

The first adaptations of a baby seem to us so simple that we do not realize that great forces are at work from the beginning. Progress and regression, rebirth and death are present from the earliest days, and are shown in the little acts of the little child as well as in the larger acts of the larger adult. The problem of life is always how to meet the demands which life makes upon us at any given time. From this point of view our sense of values changes. We no longer see the events of childhood as over small or over great; we see all phases of life as of equal importance.

This attitude of equal reverence toward every stage of growth makes us look beneath the outer expression to the inner unfolding. Since we can see so short a way into that inner life, we become patient in the presence of slow

growth, and fearful of manipulating or dictating. We learn to think of a child as of a tree planted beside the rivers of water, that brings forth its fruit in its season. We wait for that deep relationship which is our only way of discovering the real depths of a child's nature; of another human being we can have only that part which is revealed to us in love. The more we combine love with understanding the more truly do we know our children.

A normal nature must progress. It must develop like a plant toward its own form of maturity. If a leaf loses its power of unfolding we recognize that it is blighted and that this is an unnatural condition. If a child fails to progress from an infantile adaptation to one better suited to a later period of growth we must realize that some blighting influence is at work. Nor can the life force of an individual be arrested and remain static. Life must move, either forward or backward; if the act of the libido is not progressive it becomes regressive.

There is a form of regression that is normal, existing in every normal human being. Whenever a new situation is to be met, there is a strong compulsion toward retreat to the old and easier way, as well as an impulsion toward the newly demanded development. This is a wise provision of nature; it gives balance and caution. Its normal use is to provide a temporary repose from which is gathered impetus for a new advance. In this way we retreat to gather strength, to gain the forward push of life. When the compulsion toward retreat becomes the dominant force we have an individual whose life current is turned in the wrong direction. One of the most potent causes of this wrong use of the retreat is fear, which holds the individual in a temporary paralysis and may cause a
