

The International Energy Relations of China. By KIM WOODARD. Stanford: Stanford University Press, 1980. xxi, 717 pp. Notes, Bibliography, Index, Tables. \$50.

This work by Kim Woodard of the Resource Systems Institute, East-West Center, Honolulu, represents a nearly encyclopedic survey of China's international energy relations. Woodard divides his work into two sections: "Part I is policy oriented and is entitled 'Energy Policy.' It covers a comparison of Chinese and Western views of the 'energy crisis,' China's substantive international energy policies, and the domestic organizational roots of those policies" (p. 6).

Specifically, chapter 1 attempts to provide an overview of the entire book. Chapter 2 examines Chinese attitudes toward the oil and energy crisis of the last decade; chapters 3 to 9 deal with China's energy policies with respect to the Third World, the Soviet Bloc countries, Western Europe, Japan, the East Asian Continental shelf and offshore development, and international organizations. Chapter 10 places Chinese energy development in a global comparative perspective, and chapter 11 discusses China's major oil field—Tachung. Chapter 12 discusses China's energy future.

"Part 2, the 'Statistical Profile,' is designed to establish a comprehensive set of energy accounts for China from 1949 through the present, and a set of alternative projections to the year 2000" (p. 6). Chapter 13 begins Part 2 and discusses problems of gathering statistics on Chinese energy and methods of analysis. Chapters 14 to 24 provide discussion and analysis of primary energy reserves and resources, alternative estimates of energy production, primary energy production, secondary energy production, aggregate energy consumption, per capita energy consumption, energy trade by commodity and country, total energy trade by commodity, energy plant and equipment imports, and trend analysis and projection methods and alternative energy balance projections. The projections in this volume are based on Dynamo II, a computer program written at the Massachusetts Institute of Technology.

The author's tactic for handling the frequently unreliable statistical reports from the People's Republic of China (PRC) seems to be one of agglomeration. Perhaps these accumulations of figures will puzzle many readers, especially since Woodard frequently fails to distinguish qualitatively between quantitative data.

Woodard's study addresses particularly the international aspects of China's development and energy policies. It is innovative, for it seeks to integrate the "disparate fields of China studies, international relations, and energy development" (p. 6).

I have four major criticisms of this volume. One is the lack of a clear organizational structure despite the author's suggestion that the volume's structure is similar to that of an onion (p. 6). Presumably, as one peels back the chapter layers, the author's message becomes clearer. However, this technique also makes for redundancy. For example, the author devotes a chapter to Sino-Japanese energy relations, but one also finds extensive discussion of this same relationship scattered throughout the volume. The index can only partially relieve the resultant redundancy found in the various chapters and even mirrored at times on the same page. Perhaps more careful editing of the text would have helped.

A second criticism is the author's lack of use of Taiwanese research materials. In the study of the PRC, one of the richest sources of materials comes from Taiwan. (Another source entirely neglected by the author are refugee interviews.) For example, such Taiwan publications as *Issues and Studies* and *Studies in Chinese Communism* have presented important articles on energy.

Erica Strecker Downs,Richard Mesic,Charles T. Jr. Kelley,Christopher J. Bowie,Glenn Buchan,Hugh P. Levaux,2000-12-05 China s two decades of rapid economic growth have fueled a demand for energy that has outstripped domestic sources of supply China became a net oil importer in 1993 and the country s dependence on energy imports is expected to continue to grow over the next 20 years when it is likely to import some 60 percent of its oil and at least 30 percent of its natural gas China thus is having to abandon its traditional goal of energyself sufficiency brought about by a fear of strategic vulnerability and look abroad for resources This study looks at the measures that China is taking to achieve energy security and the motivations behind those measures It considers China s investment in overseas oil exploration and development projects interest in transnational oil pipelines plans for a strategic petroleum reserve expansion of refineries to process crude supplies from the Middle East development of the natural gas industry and gradual opening of onshore drilling areas to foreign oil companies The author concludes that these activities are designed in part to reduce the vulnerability of China s energy supply to U S power China s international oil and gas investments however are unlikely to bring China theenergy security it desires China is likely to remain reliant on U S protection of the sea lanes that bring the country most of its energy imports

Powering China:Reforming the Electric Power Industry in China Xu Yi-chong,2018-02-05 This title was first published in 2002 This study of the Chinese electric power industry examines the ownership and the restructuring of the industry The reform of the electric power industry is also seen as part of the wider economic development that has been taking place in China thus providing fresh perspectives on the changes taking place in both the economy and society more generally

China's Energy Security in the Twenty-First Century Kaho Yu, 2023-03-13 Kaho Yu's *China's Energy Security in the Twenty-First Century: The Role of Global Governance and Climate Change* explores the evolution of China's energy security from its bilateral going out strategy to its more multilateral Belt and Road Initiative. By analysing the topic from a multidisciplinary perspective this book examines China's evolving role in global energy governance through four empirical case studies: China's energy cooperation with Russia and Central Asia, Africa, the European Union and the Asia Infrastructure Investment Bank. Kaho Yu has written a splendid overview of China's efforts to engage in bilateral cooperation to ensure greater energy cooperation between countries in central Asia, Africa and Europe and improve global supply chains. This book could not come at a more opportune moment as the world seems to be undecided on the efficacy of cooperative multilateralism to enhance climate and energy goals.

Henry Lee, Director of the Environment and Natural Resources Program, Belfer Center for Science and International Affairs, Harvard Kennedy School. Despite profound changes in technology and the economy since the Industrial Revolution, energy remains central to both economic prosperity and international security. Economic development is plain energy intensive. The world's largest richest country is still developing. The planet is embroiled in geopolitical rivalry. The geographical distribution of critical minerals is skewed. All these mean energy security will be a profoundly important challenge in the century ahead. Yu's book provides exactly the substantive thoughtful research that we will need to begin to unpack these issues.

Energy Security Cooperation in Northeast Asia Bo Kong, Jae H. Ku, 2015-04-24 Drawing on cutting edge research from leading scholars this book investigates state preferences for regime creation and assesses state capacity for executing these preferences in Northeast Asia's energy domain defined as the geographical area comprising the following countries: Russia, Mongolia, China, Japan, South Korea and North Korea. It examines questions pertaining to how states perceive the need and necessity for establishing a regime when it comes to the issue of energy and how much commitment they make to the effort in Northeast Asia. The book analyses the factors that shape each country's fundamental energy interests in the region, how these interests impact their attitudes toward engaging the region on energy security and the way they carry out their regional engagement. Based on countries' interests in promoting institutionalized regional energy cooperation and their capacity for forging that cooperation, the collection assesses each state's role in contributing to an energy regime in Northeast Asia. It then concludes with a critique on the decade plus quest for energy security cooperation in Northeast Asia.

and suggests ways forward for facilitating regional energy security cooperation This book will be of great interest to scholars and students of environmental policy energy policy security studies Asian studies and international relations *World Energy Horizons 2000-2020* Jean-Romain Frisch,1989 **Energy Economics** Yi-Ming Wei,Qiao-Mei Liang,Gang Wu,Hua Liao,2019-09-23 This book sets out a systematic piece of research which attempts to assess the level of energy security in China investigate how national energy supply security might be improved and consider how energy trade risks might be reduced China Engages Global Governance Gerald Chan,Pak K. Lee,Lai-Ha Chan,2011-10-20 This book focuses on China's increasing involvement in global governance as a result of the phenomenal rise of its economy and global power It examines whether and in what ways China is capable of participating in multilateral interactions if it is willing and able to provide global public goods to address a wide array of global problems and what impact this would have on both global governance and order The book provides a comprehensive assessment of China's increasing influence over how world affairs are being managed how far China with increasing clout interacts with other major powers in global governance and what the consequences and implications are for the evolving global system and world order This book is the first to explore China's engagement with global governance in traditional and new securities **China's Energy Security** Giulia C Romano,Jean-Francois Meglio,2016-06-10 A secure supply of energy is essential for all nations to sustain their economy and indeed their very survival This subject is especially important in the case of China as China's booming economy and consequent demand for energy is affecting the whole world and in turn potentially driving realignments in international relations Moreover as this book argues energy security should be considered more broadly to include issues of sustainability environmental protection and the domestic organisation of energy policy and energy supply This book presents a comprehensive picture of China's energy security It covers all energy sectors coal oil gas renewables international relations with all major sources of energy supply the Middle East Central Asia Africa and key areas of domestic policy making and supply
