[The Hunter, the Stag, and the Mother of Animals](#) Esther Jacobson-Tepfer, 2015-04-08 The ancient landscape of North Asia gave rise to a mythic narrative of birth death and transformation that reflected the hardship of life for ancient nomadic hunters and herders Of the central protagonists we tend to privilege the hero hunter of the Bronze Age and his re incarnation as a warrior in the Iron

Age But before him and in a sense behind him was a female power half animal half human From her came permission to hunt the animals of the taiga and by her they were replenished She was in other words the source of the hunter s success The stag was a latecomer to this tale a complex symbol of death and transformation embedded in what ultimately became a struggle for priority between animal mother and hero hunter From this region there are no written texts to illuminate prehistory and the hundreds of burials across the steppe reveal little relating to myth and belief before the late Bronze Age What they do tell us is that peoples and cultures came and went leaving behind huge stone mounds altars and standing stones as well as thousands of petroglyphic images With *The Hunter the Stag and the Mother of Animals* Esther Jacobson Tepfer uses that material to reconstruct the prehistory of myth and belief in ancient North Asia Her narrative places monuments and imagery within the context of the physical landscape and by considering all three elements as reflections of the archaeology of belief Within that process paleoenvironmental forces economic innovations and changing social order served as pivots of mythic transformation With this vividly illustrated study Jacobson Tepfer brings together for this first time in any language Russian and Mongolian archaeology with prehistoric representational traditions of South Siberia and Mongolia in order to explore the non material aspects of these fascinating prehistoric cultures

With Words and Knives Lynda Payne,2016-02-11

The practice of medicine in the days before the development of anaesthetics could often be a brutal and painful experience Many procedures especially those involving surgery must have proved almost as distressing to the doctor as to the patient Yet in order to cure the medical practitioner was often required to inflict pain and the patient to endure it Some level of detachment has always been required of the doctor and especially of the surgeon It is the construction of this detachment or dispassion in early modern England with which this work is concerned The book explores the idea of medical dispassion and shows how practitioners developed the intellectual verbal and manual skill of being able to replace passion with equanimity and distance As the skill of dispassion became more widespread it was both enthusiastically promoted and vehemently attacked by scientific and literary writers throughout the early modern period To explain why the practice was so controversial and aroused such furor this study takes into account not only patterns of medical education and clinical practice but wider debates concerning social philosophical and religious ideas

Navigating the Jungle Steven

C. Tauber, 2015-08-27 For much of our history legal scholars focused predominantly on the law's implications for human beings while ignoring how the law influences animal welfare. Since the 1970s however, there has been a steep increase in animal advocates' use of the courts. Animal law has blossomed into a vibrant academic discipline with a rich literature that examines how the law affects animal welfare and the ability of humans to advocate on behalf of nonhuman animals. But most animal law literature tends to be doctrinally based or normative. There has been little empirical study of the outcomes of animal law cases and there has been very little attention paid to the political influences of these outcomes. This book fills the gap in animal law literature. This is the first empirically based analysis of animal law that emphasizes the political forces that shape animal law outcomes.
