The International Energy Experience Markets Regulation And The Environment:

International Energy Experience, The: Markets, Regulation And The Environment G Mackerron, Peter J Pearson, 2000-04-19 How far can energy markets be free as well as competitive What do low oil prices mean for the oil industry and other energy markets How can economic efficiency in the energy industries be reconciled with environmental protection How far is the UK model of liberalising electricity and gas industries being applied elsewhere in the world and how is it faring at home and abroad These are typical questions addressed in this collection of articles written by an international group of economists Edited by the leaders of the two leading UK academic centres of energy economics the book demonstrates how important the analysis of policy and regulatory frameworks has become for those interested in efficient energy and environmental outcomes a

Rural Electrification Hisham Zerriffi, 2010-11-08 For those in developed nations suddenly being without electricity is a disaster power cuts have us fretting over the food stored in the freezer and even a few hours without lights televisions or air conditioning is an ordeal However for an estimated 1.6 billion people worldwide the absence of electricity is their daily experience An untold number of others live with electricity that is erratic and of poor quality How can electric power be brought into their lives when the centralized utility models that have evolved in developed nations are not an economically viable option Poor rural communities in developing nations cannot simply be plugged in to a grid Small scale Distributed Generation DG ranging from individual solar home systems to village level grids run off diesel generators could provide the answer and this book compares around 20 DG enterprises and projects in Brazil Cambodia and China each of which is considered to be a business model for distributed rural electrification While large centralized power projects often rely on big subsidies this study shows that privately run and localized solutions can be both self sustaining and replicable Its three sections provide a general introduction to the issue of electrification and rural development set out the details of the case studies and compare the models involved and discuss the important thematic issues of equity access to capital and cost recovery Hisham Zerriffi shows that in each case it is not simply a matter of matching a particular technology to a particular need Numerous institutional factors come into play including the regulatory regime access to financial services and government utility support or opposition to the DG alternative Despite this in many countries the question is not whether DG has a role to play Rather it is a question of how it will play a role

Energy in a Competitive Market Colin Robinson, 2003 Covering a wide and fascinating selection of topics incorporating the whole spectrum of energy economics this book examines the belief that markets are the key to the effective allocation of resources a notion which arguably applies as much to energy as it does to any other commodity In particular it focuses on several pertinent issues including competition and regulation in gas and electricity comparative efficiency analysis in electricity regulation UK coal in competitive markets vertical integration in the oil industry cluster developments in the UK continental shelf modelling underlying energy demand trends and emissions targets environmental Kuznets curves and incentive

mechanisms Energy Policy and Regulation in the People's Republic of China C. P. Andrews-Speed, 2004-01-01 China is the world's second largest consumer of commercial energy and is therefore a significant contributor to atmospheric pollution. It is becoming a major player in global and regional markets for energy products, services and investment. This book provides an overview of the formulation and implementation of energy policy in China. Part One provides background information on China's energy sector. Part Two examines the nature of China's energy policy and of the policy making process with examples drawn from the coal and natural gas sectors as well as from the government's drive to promote energy conservation and energy efficiency. Part Three focuses on recent efforts to reform the energy sector in China and to regulate it more effectively, paying particular attention to the electrical power sector and to small scale coal mines. Part Four evaluates from the perspective of the citizen policy relating to the electrical power sector and to the closure of small scale coal mines. Part Five addresses the international dimensions of China's energy policy with accounts of both inward and outward investment and of the international political implications. About the author: Dr Philip Andrews-Speed is Director of the Centre for Energy, Petroleum and Mineral Law and Policy at the University of Dundee, Scotland. He spent fourteen years as a geologist in the international mining and petroleum industries before coming to the Centre in 1994, gaining an LL.M. in Energy Law and Policy and joining the academic staff.

Electricity Markets with Increasing Levels of Renewable Generation: Structure, Operation, Agent-based Simulation, and Emerging Designs Fernando Lopes, Helder Coelho, 2018-02-14 This book describes the common ground between electricity markets (EMs) and software agents or artificial intelligence generally. It presents an up-to-date introduction to EMs and intelligent agents and offers a comprehensive description of the research advances and key achievements related to existing and emerging market designs to reliably and efficiently manage the potential challenges of variable generation (VG). Most EMs are unique in their complex relationships between economics and the physics of energy but were created without the notion that large penetrations of variable generation (VG) would be part of the supply mix. An advanced multi-agent approach simulates the behavior of power markets over time, particularly markets with large scale penetrations of renewable resources. It is intended as a reference book for researchers, academics and industry practitioners but, given the scope of the chapters and the highly accessible style, the book also provides a coherent foundation for several different graduate courses.

China's Approach to Energy Security Shaofeng Chen, 2023-07-15 This book aims to analyze how and why China takes a state-managed marketization approach (SMMA) to energy security against the backdrop of global efforts of decarbonization and intensified strategic competition between China and the United States. How and why does China's SMMA work? Taking an evolving historical perspective, this book explores China's perception of energy security, the policy process, institutional restructuring in China's petroleum industry, China's foreign energy quest and the ramifications of the Chinese approach on the international energy market and on world decarbonization. To demonstrate to what extent China's SMMA differs from other countries, it also makes a comparative analysis of the
