Oxford Textbook of Primary Medical Care Roger Jones (Prof.),2005 *Understanding Individual Differences in Language Development Across the School Years* J. Bruce Tomblin, Marilyn A. Nippold,2014-03-26 This volume presents the findings of a large scale study of individual differences in spoken and heard language development during the school years The goal of the study was to investigate the degree to which language abilities at school entry were stable over time and influential in the child s overall success in important aspects of development The methodology was a longitudinal study of over 600 children in the US Midwest during a 10 year period The language skills of these children along with reading academic and psychosocial outcomes were measured There was intentional oversampling of children with poor language ability without being associated with other developmental or sensory disorders Furthermore these children could be sub grouped based on their nonverbal abilities such that one group represents children with specific language impairment SLI and the other group with nonspecific language impairment NLI represents poor language along with depressed nonverbal abilities Throughout the book the authors consider whether these distinctions are supported by evidence obtained in this study and which aspects of development are impacted by poor language ability Data are provided that allow conclusions to be made regarding the level of risk associated with different degrees of poor language and whether this risk should be viewed as lying on a continuum The volume will appeal to researchers and professionals with an interest in children s language development particularly those working with children who have a range of language impairments This includes Speech and Language Pathologists Child Neuropsychologists Clinical Psychologists working in Education as well as Psycholinguists and Developmental Psychologists Expanding the Boundaries of Health and Social Science Frank Kessel, Patricia Rosenfield, Norman Anderson,2008-03-11 It is now widely recognized that research on human health requires more than a focus on human biology and disease entities Lifestyles attitudes stress education income all are now understood to contribute to the spread of disease the effectiveness of curative therapies and the prevention of illness as well as to good health and an enhanced sense of well being However despite such developments and the rise of interdisciplinary research there is still considerable debate about how best to conduct research and shape policies that insightfully integrate concepts and methods drawn from the full range of the health social and behavioral sciences Moreover scholars and researchers who

wish to engage in such interdisciplinary inquiry have no texts that serve as substantive and practical guides to the most effective avenues This volume fills this unfortunate gap by presenting a series of case studies that provide a variety of illustrative models of how best to undertake interdisciplinary research on health All the authors have successfully carried out innovative collaborative research programs they give compelling accounts of the benefits of interdisciplinary research and the central strategies required for successfully achieving such benefits This volume will be an invaluable resource for scholars and scientists as well as for decision makers in academic settings foundations and government agencies seeking to develop and promote interdisciplinary programs that expand the boundaries of research dedicated to improving human health and well being
